## **10. Specification of Packaging**

10.1 Appearance and Dimensions (8mm-wide, Plastic tape)

#### **10.2 Specification of Taping**

(1)Packing quantity(Standard quantity) 3000 pcs. / reel

(2)Packing Method

Products shall be packaged in each embossed cavity of plastic tape and sealed with cover tape.

(3) Spliced point

The cover tape have no spliced point.

(4) Sprocket Hole

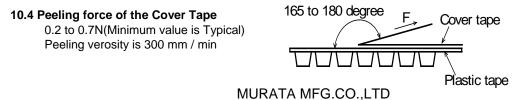

The sprocket holes are to the right as the tape is pulled toward the user.

(5)Missing components number

Missing components number within 0.025% of the number per reel or 1 pc, whichever is greater, and are not continuous. The specified quantity per reel is kept.

## 11. $\Delta$ Caution

## **11.1 Mounting Direction**

Mount products in right direction.

Wrong direction which is 90° rotated from right direction causes not only open or short circuit but also flames or other serious trouble.

#### **11.2 Limitation of Application**

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

- (1) Aircraft equipment
- (2) Aerospace equipment
- (3) Undersea equipment
- (4) Power plant control equipment
- (5) Medical equipment
- (6) Transportation equipment (vehicles, trains, ships, etc.)
- (7) Traffic signal equipment
- (8) Disaster prevention / crime prevention equipment
- (9) Data-processing equipment
- (10) Applications of similar complexity and / or reliability requirements to the applications listed in the above.

## MURATA MFG.CO., LTD

#### SpecNo.JEFK243A-0005C-01

#### 12. Notice

Products can only be soldered with reflow.

This product is designed for solder mounting.

Please consult us in advance for applying other mounting method such as conductive adhesive.

#### 12.1 Flux and Solder

Flux	Use rosin-based flux, (with converting chlorine content 0.06 to 0.1(wt)%.), but not highly acidic flux (with Halogen content exceeding 0.2(wt)% conversion to chlorine). Do not use water-soluble flux.
Solder	Use Sn-3.0Ag-0.5Cu solder

#### 12.2 Assembling

<Exclusive use of Reflow soldering>

Flow soldering may cause deterioration in insulation resistance.

So, reflow soldering shall be applied for this product.

#### **12.3 Cleaning Conditions**

Products shall be cleaned on the following conditions.

- (1) Cleaning temperature shall be limited to 60°C max. (40°C max. for Isopropyl alcohol.)
- (2) Ultrasonic cleaning shall comply with the following conditions, avoiding the resonance phenomenon at the mounted products and P.C.B..
  - Power: 20W/I max.
     Frequency: 28kHz to 40kHz
     Time: 5 min max.
- (3) Cleaner
  - 1. Alternative cleaner Isopropyl alcohol (IPA)
  - 2. Aqueous agent PINE ALPHA ST-100S
- (4) There shall be no residual flux and residual cleaner after cleaning. In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized
- water in order to remove the cleaner.
- (5) Other cleaning

Please contact us.

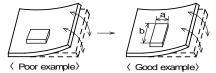

## 12.4 Resin coating

The electrical performance may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit. So, please pay your careful attention when you select resin in case of coating/molding the products with the resin. Prior to use the coating resin, please make sure no reliability issue is observed by evaluating products mounted on your board.

#### 12.5 Attention regarding P.C.B. bending

- The following shall be considered when designing and laying out P.C.B.'s.
- (1) P.C.B. shall be designed so that products are not subject to the mechanical stress due to warping the board.

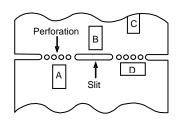

Products shall be location the sideways Direction (Length : a<b) to the mechanical Stress.

(2)Components location on P.C.B. separation.

It is effective to implement the following measures, to reduce stress in separating the board. It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

Contents of Measures	Stress Level
(1) Turn the mounting direction of the component parallel to the board separation surface.	A > D*1
(2) Add slits in the board separation part.	A > B
(3) Keep the mounting position of the component away from the board separation surface.	A > C

## SpecNo.JEFK243A-0005C-01

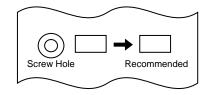

\*1 A > D is valid when stress is added vertically to the perforation as with Hand Separation.

If a Cutting Disc is used, stress will be diagonal to the PCB, therefore A > D is invalid.

(3) Mounting Components Near Screw Holes

When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.

## 12.6 Attention Regarding P.C.B. Design

< The Arrangement of Products >

P.C.B. shall be designed so that products are far from the portion of perforation.

The portion of perforation shall be designed as narrow as possible and shall be designed so as not to be applied the stress in the case of P.C.B. separation.

Products shall not be arranged on the line of a series of holes when there are big holes in P.C.B. (Because the stress concentrate on the line of holes.)

< Products Placing >

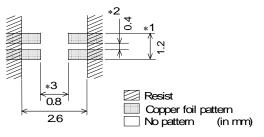

Support pins shall be set under P.C.B . to prevent causing a warp to P.C.B. during placing the products on the other side of P.C.B.

< P.C.B. Separation >

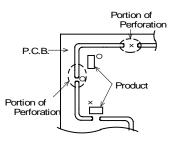

P.C.B. shall not be separated with hand.

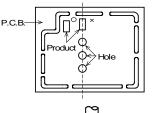

P.C.B. shall be separated with the fixture so as not to cause P.C.B. bending.

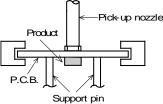

## 12.7 Standard Land Dimensions (Reflow)

- \*1 If the pattern is made with wider than 1.2mm. It will result to let component turn around, because melting speed is different. In the worst case, short circuit between lines may be occured.
- \*2 If the pattern is made with less than 0.4mm , in the worst case , short circuit between lines may be occurred due to the spread of soldering paste or mount placeing accuracy.
- \*3 If the pattern is made with wider than 0.8mm, the strength of bending will be reduced.
- \*4 Do not use gilded pattern. A copper wire may cause open by dissolution of metallization.

MURATA MFG.CO.,LTD

#### SpecNo.JEFK243A-0005C-01

## P8/9

### 12.8 Standard Soldering Condition

#### 1. Reflow Soldering

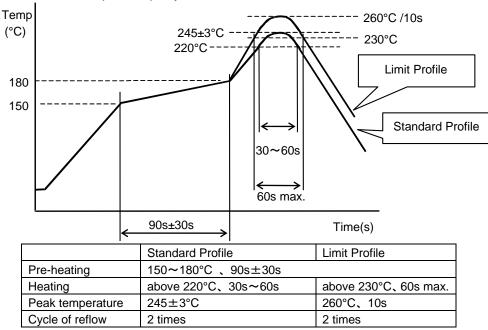

- (1) Standard printing pattern for soldering.
  - Standard thickness of the solder paste should be 100 to 150µm.
  - Use the solder paste printing pattern of the right pattern.
  - For the resist and copper foil pattern, use standard land dimensions.
  - Use the Solder Sn-3.0Ag-0.5Cu for pattern printing.
  - Spread of soldering paste between lines may cause short circuit of lines.
- (2) Soldering Temperature

Temperature difference between soldering and surface of components must be within 150°C, in preheating. When components are immersed in liquid after soldering, temperature difference should be within 100°C. If preheating is not enough, components may be cracked and cause deterioration in insulation resistance.

(3) Soldering Condition

Standard soldering profile and the limit soldering profile is as follows.

The excessive limit soldering conditions may cause leaching of the electrode and / or resulting in the deterioration of product quality.

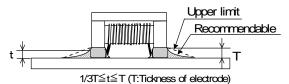

#### 2. Reworking with Soldering iron

The following conditions must be strictly followed when using a soldering iron after being mounted by reflow soldering.

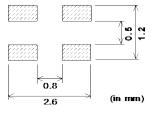

- · Pre-heating: 150°C, 1 min
- Soldering iron output: 30W max.
   Tip diameter:φ3mm max.
- Tip temperature: 350°C max. Tip
- Soldering time : 3(+1,-0) seconds. Times : 2times max.
- Notes: Do not touch the products directly with the soldering iron.

#### 3. Solder Volume

Solder shall be used not to be exceeded the upper limits as shown below.

Accordingly increasing the solder volume, the mechanical stress to Chip is also increased. Exceeding solder volume may cause the failure of mechanical or electrical performance.

## MURATA MFG.CO.,LTD

tweezei

## SpecNo.JEFK243A-0005C-01

#### 12.9 Caution for use

·When you hold products with a tweezer, please hold like a figure of the right side, and sharp material, such as a pair of tweezers, shall not be touched to

the winding portion to prevent the breaking of wire.

·Mechanical shock should not be applied to the products

mounted on the board to prevent the breaking of the core.

#### 12.10 Handling of a substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the product. Bending

Twisting

#### 12.11 Brushing of neighborhood of products

When you clean the neighborhood of products such as connector pins, bristles of cleaning brush shall not be touched to the winding portion to prevent the breaking of wire.

#### **12.12 Operating Environment**

Do not use this product under the following environmental conditions, on deterioration of the performance, such as insulation resistance may result from the use.

- (1) in corrosive gases (acidic gases, alkaline gases, chlorine, sulfur gases, organic gases and etc.)
- (2) in the atmosphere where liquid such as organic solvent, may splash on the products.

#### 12.13 Storage Condition

- (1) Storage period
  - Use the products within 12 months after delivered.
  - Solderability should be checked if this period is exceeded.
- (2) Storage environment conditions
  - ·Products should be stored in the warehouse on the following conditions.
    - Temperature : -10 ~ +40°C
    - 15 to 85% relative humidity No rapid change on temperature and humidity. Humidity
  - · Products should not be stored in corrosive gases, such as sulfureous, acid gases, alkaline gases,
  - to prevent the following deterioration. Poor solderability due to the oxidized electrode.
  - Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
  - Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.
  - · Avoid storing the product by itself bare (i.e.exposed directly to air).
- (3) Delivery

Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

## 13. $\Delta$ Note

- (1)Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
- (2)You are requested not to use our product deviating from the reference specifications.
- (3)The contents of this reference specification are subject to change without advance notice. Please approve our product specifications or transact the approval sheet for product specifications before ordering.
