## Slotted Optical Switch

OPB852A1-3, OPB853A1-3

## Tr Electronics

## Features:

- Inexpensive opaque plastic housing
- Choice of transistor (OPB852) or photodarlington (OPB853) output
- $0.125^{\prime \prime}(3.18 \mathrm{~mm})$ slot width
- $0.290^{\prime \prime}(7.37 \mathrm{~mm})$ lead spacing
- Apertured for high resolution

## Description:

Slotted optical switches in the OPB852, and OPB853 series consist of an infrared emitting diode and a NPN silicon phototransistor or photodarlington, mounted on opposite sides of a $0.125^{\prime \prime}(3.175 \mathrm{~mm})$ wide slot. The OPB852A, OPB852B and OPB852C have phototransistor output, while the OPB853A, OPB853B and OPB853C have photodarlington output.

On each of these devices, the emitter has a molded-in aperture of 0.050 " $\times 0.050$ " ( $1.270 \mathrm{~mm} \times 1.270 \mathrm{~mm}$ ) and the phototransistor (OPB852) or photodarlington (OPB853) has a molded-in aperture of $0.010^{\prime \prime} \times 0.050$ " ( $0.254 \mathrm{~mm} \times 1.270$ mm ).

Phototransistor or photodarlington switching occurs when an opaque object passes through the slot.

## Applications:

- Non-contact interruptive object sensing
- Assembly line automation
- Machine automation
- Equipment security
- Machine safety
