PRO-SHIELD® 7201

NON-CONDUCTIVE AIR-DRYING LIQUID PRIMER

Customer Value Proposition:

PRO-SHIELD® 7201 is an air-drying liquid primer used to improve the adhesion of Parker Chomerics PRO-SHIELD conductive paints and coatings to metal and other non-silicone substrates. The primer is moisture reactive and clear in color.

How To Apply:

1. Surfaces to be joined must be clean, dry and oil free. In a well-ventilated area, clean the substrates with isopropyl alcohol (IPA) and let the solvent flash off. (Other solvents, such as methylethyl-ketone (MEK), toluene, or acetone can be used to clean difficult to remove contaminants).

2. Wet a lint-free cotton cloth with PRO-SHIELD 7201 primer and apply to the surface in horizontal and vertical strokes. Keep the surface wet at all times. A cotton swab is a common applicator for a grooved or stepped surface.

NOTE: Due to the low flash point temperature of the primer, ensure that the container is re-sealed immediately after use.

3. The primed surface must cure for 30 minutes at room temperature. A relative humidity of 40% to 70% is optimal. A low humidity level may require a longer cure time.

NOTE: There is no elevated temperature cure time for the primer.

4. Apply the PRO-SHIELD adhesive / sealant perproduct instructions.

NOTE: If the primer has been applied for more than 4 hours without the application of the adhesive / sealant, repeat steps 1 through 4.

Ordering Information

Part Number	Packaging	Weight (grams)
90-02-7201-0000	3 dram glass vial	10
90-09-7201-0000	4oz glass bottle	95
