- *1 Operating condition of peak current : Peak current is less than 10sec., duty is less than 35% and average current is less than rated current. (rated current2 at Module W, Z, 9, Q and V)
- *2 Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN : RM101). Ripple and Ripple Noise is measured by using measuring board with capacitor of 22 μF within 150mm from output terminal.
- *3 Drift is changed in DC output for an eight hour period after half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.
- *4 When the output voltage of module A is used less than 2.0V, keep minimum output current 2.6A.
- *5 It is a value from 0 to rated output current1. The current on non-measurement side is fixed.
- *6 It is a value from 0 to rated output current2. The current on non-measurement side is fixed.
- *7 The sum of +power and -power must be less than output power(Y:50W, W:76.8W, Z:75W, 9:76.8W, Q:153.6W, V:165W).

- *8 Ratings of V2 can draw up to 50% of rated current at the time of 0A in load of V1. (Only module S,T,U refer to instruction manual 5 for details.)
- * Each output of module Y,Z, 9, Q and V is a ground common type (not isolated), each output of module S,T and U is isolated.
- * For ACE300F,450F and 650F , input and output terminals can be set at the same side if Input module (code:I) is installed instead of the most left module.
- * Modules which can correspond to medical electrical equipment (UL2601-1, EN60601-1) are all modules except module S, T and U. Refer to instruction manual 8. for details.

Assembling and Installation Method

Installation method

- Fans for forced air cooling are built in.
Ensure that the inlet (rear) and outlet (output terminal) vents are not blocked, to prevent disruption of the airflow.
*Option with reversed airflow (-F) is also available.
- If the unit is used in a dusty environment, an air filter should be used so the cooling efficiency of the fan is not reduced.
- If the fan stops, the thermal protection may be activated, shutting down the output. Life expectancy of the fan varies depending on usage conditions; therefore regular inspections of the fan are required for increased reliability. Should the fan become non-operational over the course of time, it can be replaced. Refer to the optional parts section of this catalog.
- When mounting the power supply with screws, it is recommended that this be done as shown in right figure. If other methods are used, be sure the weight of the power supply is taken into account.
- Avoid installation method 2 as shown in Fig. D, which can cause stress on the mounting holes.
- Maximum length of mounting screws is 6mm (Refer to right figure.).

Derating

- The ACE series comprises power supplies consisting of a combination of output modules. Make sure each output module is used within specifications, and that the total output power of all modules is equal to, or less than the rated total output power.
Refer to instruction manual 5 for Definition of load factor.

- The derating curve for the ambient temperature (inlet temperature for cooling) of output modules is shown in right figure.
- Operation within the hatched area will result in different ripple and ripple noise specifications.
