Refer to instruction Manual 6. In detail.

\*4 Only output 24V and 48V DC models are applied that the upper temperature limit is 45°C.  
\* Avoid prolonged use under over - load.  
\* Parallel operation with other model is not possible.  
\* Derating is required when operated with chassis and cover.

Assembling and Installation Method

Installation method

■ This power supply is manufactured by SMD technology. The stress to P.C.B like twisting or bending causes the defect of the unit, so handle the unit with care.

■ In case of metal chassis, keep the distance between d1 & d2 for to insulate between lead of component and metal chassis, use the spacer of 8mm or more between d1. If it is less than d1 & d2, insert the insulation sheet between power supply and metal chassis.

■ (F) mounting should be operated by Forced air.

Mounting screw

■ The mounting screw should be M3. The hatched area shows the allowance of metal parts for mounting.

- \*1 Recommendation to electrically connect FG to metal reducing noise.
- \*2 LGA240A only Refer to External view for location

■ If metallic fittings are used on the component side of the board, ensure there is no contact with surface mounted components.

■ The operative ambient temperature is different by with / without chassis cover or mounting position.

Note: In the hatched area, the specification of Ripple, Ripple Noise is different from other area.

■ Make sure the temperature at point A and point B is less than the temperatures shown in Instruction Manual 3.

■ The ambient temperature should be measured 5 to 10 cm away from the power supply so that it won't be influenced by the heat from the power supply. Please consult us for more details.
