GENERAL DESCRIPTION

This user guide describes information related to the **EVAL-ADM3260MEBZ** evaluation board. The evaluation board provides an easy way for users to add isolation to the existing USB to I²C interface provided by the **USB-SDP-CABLEZ** dongle through the use of the **ADM3260** hot swappable, dual I²C isolators with integrated dc-to-dc converter. See Figure 2 and Figure 3 for an example of a **USB-SDP-CABLEZ** and **EVAL-ADM3260MEBZ** setup.

The **EVAL-ADM3260MEBZ** evaluation board is simple to use. All users need to do is to connect it in between the **USB-SDP-CABLEZ** dongle and a supported evaluation kit from Analog Devices, Inc. (see Figure 2). The result is a 2.5 kV isolation barrier created between the PC and the supported evaluation kit, with I²C signal communication and power delivery still maintained.

For additional information on how to achieve data and power transferring across isolation, refer to the **ADM3260** data sheet.

Based on the *isoPower* technology, the integrated isolated dc-to-dc converter on the **ADM3260** uses high frequency switching elements to transfer power through its transformer. Special care is taken during board layout to meet emissions standards. See the [AN-0971 Application Note](#) for board layout recommendations.

For full details, see the **ADM3260** data sheet, which must be used in conjunction with this user guide when using the evaluation board.
