

MAX32625MBED ARM mbed Enabled Development Platform

Evaluates: MAX32625

General Description

The MAX32625MBED provides a convenient platform for evaluating the capabilities of the MAX32625 microcontroller. The MAX32625MBED also provides a complete, functional system ideal for developing and debugging applications.

The MAX32625MBED includes a MAX32625 ARM® Cortex®-M4 microcontroller with FPU, prototyping area with adjacent access to precision analog front end (AFE) connections, I/O access through Arduino®-compatible connectors, additional I/O access through 100mil x 100mil headers, USB interface, and other general-purpose I/O devices.

Go to <http://developer.mbed.org/platforms/MAX32625MBED> to get started developing with this board.

Ordering Information appears at end of data sheet.

Benefits and Features

- Arduino-Compatible Headers and mbed Support Enable Rapid Prototyping of Low-Power Embedded Systems
- MAX32625 Microcontroller
 - 96MHz ARM Cortex-M4 Microcontroller with FPU
 - 512KB Flash Memory
 - 160KB SRAM
 - 8KB Instruction Cache
 - Full-Speed USB 2.0
 - Three SPI Masters, One Slave
 - Two I²C Masters, One Slave
 - Three UARTs
 - 1-Wire Master
 - 40 GPIOs
 - Four Input 10-Bit ADC
- Expansion Connections
 - Arduino Form-Factor Headers
 - MicroSD Card Connector
 - Micro-USB Connectors
 - Prototyping Area
- Integrated Peripherals
 - 4x User Indicator LED
 - 2x User Pushbutton
- Integrated DAPLink Programming Adapter
 - Drag-and-Drop Programming
 - CMSIS-DAP SWD Debugger
 - USB Virtual UART

Arduino is a registered trademark of Arduino, LLC.

Figure 1. MAX32625MBED Features

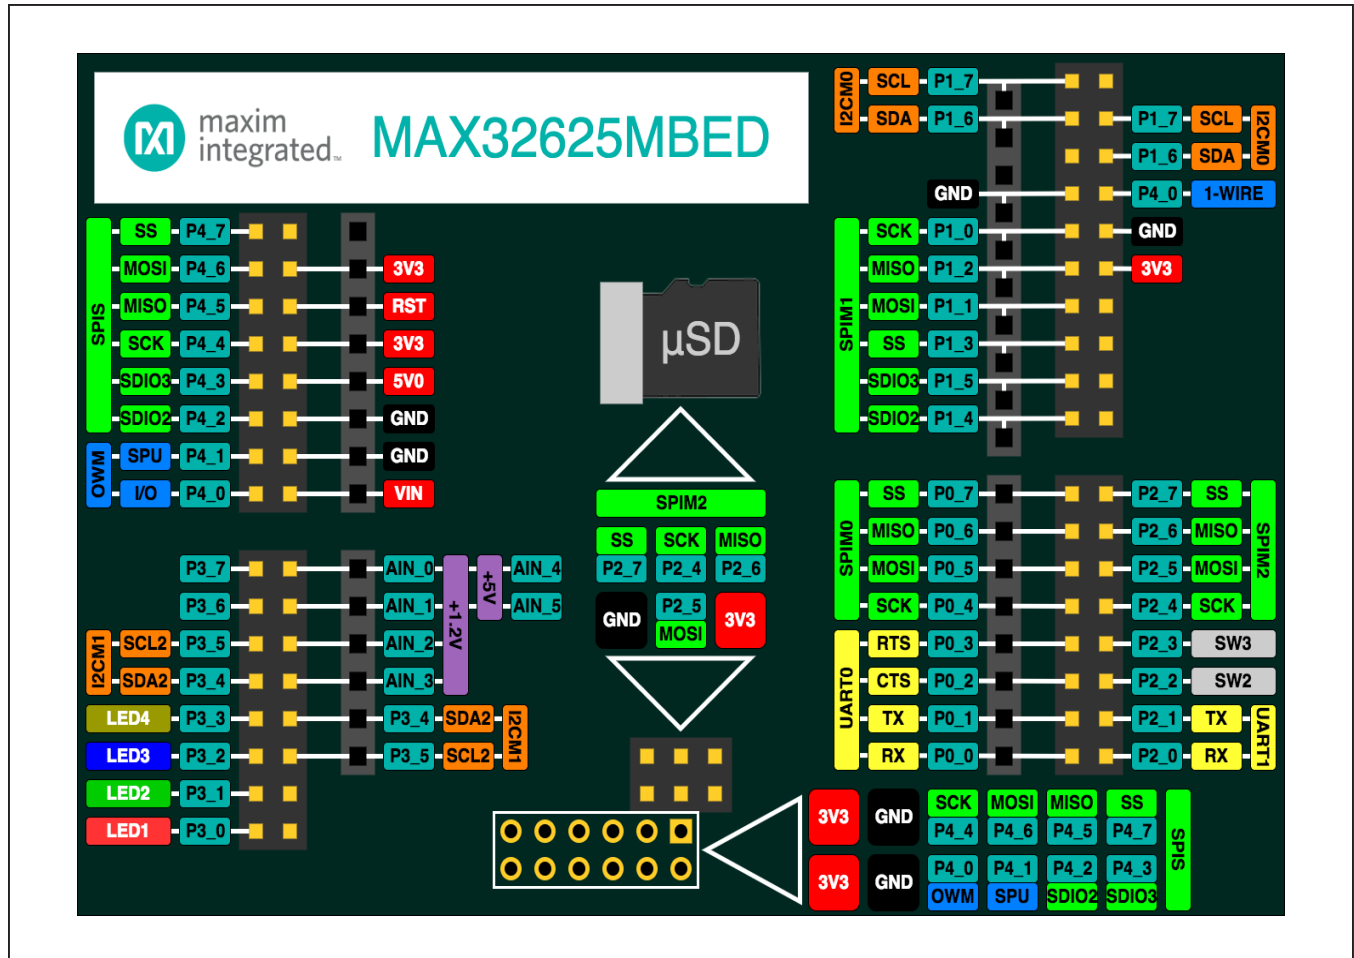

Figure 2. MAX32625MBED Pinout

Detailed Description

The MAX32625MBED board is general purpose in nature. However, the ability to access the majority of I/O signals allow for easy evaluation of the MAX32625. This section describes each major function or component on the MAX32625MBED.

Board Power

The MAX32625MBED can be powered by either of the USB Micro-B connectors or an external source: VIN, V5.0, or V3.3.

HDK USB Supply

The HDK USB connector provides access to the DAPLink circuitry. Power supplied from the HDK USB connector, CN2, is limited to 500mA. Only the HDK USB connector, CN2, powers the DAPLink circuitry. This supply is regulated to supply the HDK_V3.3 rail and is also connected to the V5.0 rail through a forward biased diode. From the V5.0 rail, it is regulated to supply V3.3.

MAX32625 USB Device Interface Supply

Power supplied from the MAX32625 USB device interface connector, CN1 is limited to 500mA. This supply is connected to the V5.0 rail through a forward biased diode. From the V5.0 rail, it is regulated to supply V3.3.

MAX32625MBED ARM mbed Enabled Development Platform

Evaluates: MAX32625

External Supply VIN

Power supplied from the VIN, J4 pin 8, is regulated to supply the V5.0 rail. The voltage input range for this input is 5V to 12V DC.

External Supplies V5.0 and V3.3

Power supplied by V5.0, J4 pin 5, is connected directly to the V5.0 rail. Likewise, power supplied by V3.3, J4 pin 4, is connected directly to the V3.3 rail.

Pushbuttons

Two pushbuttons are available for application use: SW2 and SW3 are connected to port pins P2_2 and P2_3, respectively. Pushbuttons are normally open; therefore, provide a logic 0 when depressed. Firmware defines the action taken on switch closure. Pushbutton SW4 provides a power-on reset function for the MAX32625 by asserting the RSTN input.

USB

The MAX32625 provides an integrated USB2.0 Fullspeed interface (12Mbps). This interface is accessed through the USB Micro-B connector, CN1.

LEDs

Four LEDs are available for application use: D4 (yellow), D5 (red), D6 (blue), and D7 (green) are connected to MAX32620 GPIO pins P3_3, P3_0, P3_2, and P3_1, respectively. LED GPIOs should be configured as open drain due to 3.3V LED source voltages. An LED illuminates when the appropriate GPIO pin is driven low. One power supply status LED, D10, is connected to supply rail V5.0.

Prototyping Area

An area for adding customer-specific circuitry is provided. This matrix is on 100mil spacing and is usable for solder or wire-wrap construction. Power and ground rails are conveniently located above and below this area.
