

WL Series Liquid Cooling System

Note: This product is not recommended for new designs. Please use the recommended replacement:

MFG Part Number: 387005598
 Description: LA5000

The WL5000 is a re-circulating liquid to air heat exchanger that offers dependable, compact performance by removing large amounts of heat from a liquid circuit. The coolant is re-circulated using a high-pressure pump to assure maximum flow rate. Heat from coolant is absorbed by a radiant heat exchanger and dissipated into the ambient environment using brand name fan. Manual adjustments can be made to control flow switch. Customized features are available, however, MOQ applies.

Features

- Cooling to ambient
- High heat pumping capacity
- Compact form factor
- Long life operation

Applications

- Cooling Particle Accelerators: Linear Accelerators and Cyclotrons
- Semiconductor Fabrication Equipment Cooling
- X-ray Cooling in Industrial Scanners

FLUID OPERATING POINTS

100% Water

Cooling Power (Qc) = 5000 Watts
 Thermal Conductance = 274.5 W/°C
 ΔT (Ambient-Coolant)* = 18.2 °C
 ΔT (Outlet-Inlet)** @ 6.0 L/min = 12.0 °C

70/30 Water-Glycol

Cooling Power (Qc) = 5000 Watts
 Thermal Conductance = 241.0 W/°C
 ΔT (Ambient-Coolant)* = 20.7 °C
 ΔT (Outlet-Inlet)** @ 6.0 L/min = 12.6 °C

60/40 Water-Glycol

Cooling Power (Qc) = 5000 Watts
 Thermal Conductance = 223.9 W/°C
 ΔT (Ambient-Coolant)* = 22.3 °C
 ΔT (Outlet-Inlet)** @ 6.0 L/min = 13.1 °C

50/50 Water-Glycol

Cooling Power (Qc) = 5000 Watts
 Thermal Conductance = 212.0 W/°C
 ΔT (Ambient-Coolant)* = 23.6 °C
 ΔT (Outlet-Inlet)** @ 6.0 L/min = 13.8 °C

* ΔT (Ambient-Coolant) is the temperature difference between the ambient temperature and the coolant temperature that is at the outlet of the heat exchanger during steady-state operation. This temperature difference would initially be 0 and increase to the steady state value under load. This would also be the temperature at the inlet to the application.

** ΔT (Outlet-Inlet) is the temperature difference between the inlet temperature and the outlet temperature of the application at the nominal coolant flow. More flow (application pressure drop less than nominal) would necessarily mean a smaller ΔT.

WL5000 Heat Dissipation
 5000 Watt Requirement

WL5000 Fluid Inlet/Outlet Temperature Difference (ΔT)
 @ Nominal Flow 6 L/min

WL5000 - Pump Curve

TECHNICAL SPECIFICATIONS

Performance

Nominal Cooling Capacity	5,000 Watts
Nominal Operating Flowrate (60 Hz)	6.0 L/min @ 6.4 Bar
Nominal Operating Flowrate (50 Hz)	6.0 L/min @ 6.0 Bar

Operation

Coolant	Water or Water/Glycol
Operating Temperature	5°C to 40°C
Storage temperature range (w/o coolant)	-25°C to 70°C
Humidity range	20% to 80%
Storage Humidity range	5% to 95%, non-condensing
Input Voltage	230 VAC
Frequency	50/60 Hz
Current	< 2.6 Amps
Noise	< 67 dB(A)
Flow Switch Open	≤ 4 L/min
Maximum Forward Pressure	7 Bar

Physical

Height	481 mm
Length	483 mm
Width	406 mm
Weight	38.5 kg
Coolant Capacity	5 Liters
Couplings	Press Fit (9 mm ID hose)

Features**Applications****Compact design**

Medical imaging systems

Reliable operation

Photonics laser systems

Adjustable flow switch

X-Ray scanning systems

Bypass valve protection

Semiconductor fabrication

NOTES

1. Check coolant level regularly. For optimal cooling performance, coolant level should always be above radiator fins.
2. Hose selection should be of material and thickness to support pressure resistance and coolant type.
3. Manual adjustments can be made to control pressure and flow rate.
4. Check pump filter and dust on heat exchanger periodically for cleaning.
