

Suited for Advanced Users

LulzBot Mini PEI Sheet

This PEI sheet is a direct replacement for the PEI (Polyetherimide) print surface on the LulzBot Mini. This revolutionary new print surface has been tested by the advanced members of the LulzBot community and has proved to be an easier and more reliable 3D printing surface.

When cleaned and heated to the recommended temperatures, your print sticks well, the first time and releases from the heated bed once cooled. This LulzBot Mini PEI sheet measures 170 mm by 170 mm. The additional material in width and length to allow users to trim to fit their product. This will also allow for a perfectly aligned and finished edge to match the functional dimension of 150 mm by 150 mm on the LulzBot Mini.

Works with: LulzBot Mini

Features

The PEI sheet comes prepared with a self-adhesive layer already applied to make installation quick and easy.
