Internal Modules

Module Options

Auxiliary Switch (AX)

- Provides remote "On" and "Off" indication

Alarm Switch (AL)

- Provides immediate indication of a breaker trip.

Shunt and Undervoltage Trips (SHT) & (UVT)

- (SHT) - Opens breaker in response to externally applied voltage signal.
- (UVT) - Automatically trips when control voltage drops. Breaker cannot be closed again until voltage returns to 85% of control voltage.

UTS800N CHARACTERISTIC

This curve is to be used for application and coordination purposes only.

LONG-TIME DELAY (400~1200A)

Long-time pickup $0.4 \sim 1 \times I_r$
and delay $0.5 \sim 20s$

①, ②, ③ - Long-time setting

Notes :

1. There is a thermal-imaging effect that can act to shorten the long-time delay. The thermal imaging effect comes into play if a current above the long-time delay pickup value exists for a time and then is cleared by the tripping of a downstream device or the circuit breaker itself. A subsequent overload will cause the circuit breaker to trip in a shorter time than normal. The amount of time delay reduction is inverse to the amount of time that has elapsed since the previous overload.
2. Total clearing times shown include the response times of the trip unit, the circuit breaker opening, and the extinction of the current.

SHORT-TIME DELAY (400-1200A)

Short-time pickup $1.5-10 \times I_r$
and delay $0.1-0.4s$

④, ⑤ - Short-time setting

INSTANTANEOUS AND GROUND FAULT (400~1200A)

Instantaneous pickup $2\sim 15 \times I_n$
and Ground fault pickup $0.2\sim 1 \times I_n$
and delay $0.1\sim 0.4s$

⑥, ⑦, ⑧ - Instantaneous and Ground fault setting
