

Introduction

The STM320518-EVAL evaluation board is designed as a complete demonstration and development platform for STMicroelectronic's ARM cortex-M0 core-based STM32F051R8T6 microcontroller. It features two I2Cs, two SPIs, two USARTs, a 12-bit ADC, a 12-bit DAC, two GP comparators, internal 8 KB SRAM and 64 KB Flash, touch sensing, CEC and SWD debugging support.

The full range of hardware features on the board is able to help you evaluate all peripherals (motor control connector, RS-232, RS-485, audio DAC, linear sensor, microphone ADC, TFT LCD, IrDA, IR LED, IR receiver, LDR, MicroSD card, CEC on two HDMI connectors, RF E2PROM, temperature sensor and so on) and develop your own applications. Extension headers make it possible to easily connect a daughterboard or wrapping board for your specific application.

An ST-LINK/V2 is integrated on the board as an embedded in-circuit debugger and programmer for the STM32 MCU.

1 Overview

1.1 Features

- Three 5 V power supply options: power jack, ST-LINK/V2 USB connector or daughterboard
- Audio speaker and microphone connected to DAC and ADC of STM32F051R8T6
- 2 Gbyte or more SPI interface MicroSD card
- I2C compatible serial interface temperature sensor
- RF E2PROM
- RS-232 and RS-485 communication
- IrDA transceiver
- IR LED and IR receiver
- SWD debug support, ST-LINK/V2 embedded
- 240 x 320 TFT color LCD connected to SPI interface of STM32F051R8T6
- Joystick with 4-direction control and selector
- Reset, tamper and user buttons
- 4 color LEDs
- Extension connector for daughterboard or wrapping board
- MCU voltage choice fixed at 3.3 V or adjustable from 2 to 3.6 V
- Linear sensor
- Light dependent resistor (LDR)
- Potentiometer
- Two HDMI connectors with DDC and CEC
- Motor control connector
- Boards RoHS compliant (lead free)

1.2 Demonstration software

Demonstration software is preloaded in the board's Flash memory for easy demonstration of the device peripherals in stand-alone mode. For more information and to download the latest version available, refer to the STM320518-EVAL demonstration software available at www.st.com.

1.3 Order code

To order the STM32F051R8T6 evaluation board, use the order code STM320518-EVAL.

1.4 Delivery recommendations

Some verifications are needed before using the board for the first time to make sure that nothing has been damaged during shipment and that no components are unplugged or lost.

When the board is extracted from its plastic bag, please check that no component remains in the bag.

The main components to verify are:

1. The 8 MHz crystal (X1) which may have been removed from its socket by a shock.
2. The MicroSD card which may have been ejected from the connector CN14 (left side of the board).
3. The dual interface EEPROM board (ANT7-M24LR-A) which may have been unplugged from the connector CN2 (top right corner of the board).

2 Hardware layout and configuration

The STM320518-EVAL evaluation board is designed around the STM32F051R8T6 (64-pin LQFP package). The hardware block diagram shown in *Figure 2* illustrates the connection between the STM32F051R8T6 and peripherals (motor control connector, RS-232, RS-485, audio DAC, linear sensor, microphone ADC, TFT LCD, IrDA, IR LED, IR receiver, LDR, MicroSD card, CEC and DDC on two HDMI connectors, RF E2PROM and temperature sensor and so on). *Figure 3* shows where you can locate these features on the evaluation board.

Figure 2. Hardware block diagram

Figure 3. STM320518-EVAL evaluation board layout

2.1 Development and debug support

Version 2 of the ST-LINK (ST-LINK/V2) is embedded on the board. This tool allows onboard program loading and debugging of the STM32F051R8T6 using the SWD interface. The third-party debug tools are also supported by the SWD connector CN10.

A specific driver must be installed on your PC for communication with the embedded ST-LINK/V2. This driver, called *ST-LINK_V2_USBdriver.exe* is available on the web. To download and install this driver, refer to the software and development tools page for the STM32F0 family on www.st.com.

Third-party toolchains, such as Atollic TrueSTUDIO, Keil MDK-ARM, IAR EWARM and TASKING VX-toolset for ARM Cortex-M, support ST-LINK/V2 according to [Table 2](#).

Table 2. Third-party toolchain support

Manufacturer	Toolchain	From version...
Atollic	TrueSTUDIO	2.1
IAR	EWARM	6.20.4
Keil	MDK-ARM	4.20
TASKING	VX-toolset for ARM Cortex-M	4.0.1

The embedded ST-LINK/V2 is connected to the PC via a standard USB cable from connector CN13. The bicolor LED LD7 (COM) indicates the status of the communication as follows.

- Slow blinking Red/Off: at power-on before USB initialization.
- Fast blinking Red/Off: after the first correct communication between the PC and ST-Link/V2 (enumeration).
- Constant Red On: when initialization between the PC and ST-LINK/V2 is successfully finished.
- Constant Green On: after successful target communication initialization.
- Blinking Red/Green: during communication with the target.
- Red On: communication is finished and OK.
- Orange On: communication failure.

Note: The board can be powered via CN13 (embedded ST/LINK/V2 USB connector) even if an external tool is connected to CN9 (high density SWD connector) or CN10 (SWD connector).

2.2 Power supply

The STM320518-EVAL evaluation board is designed to be powered by a 5V DC power supply and to be protected by PolyZen from incorrect power plug-in events.

It is possible to configure the evaluation board to use any of the following three sources for the power supply.

- 5V DC power adapter connected to CN15, the power jack on the board (power supply unit (PSU) on the silk screen). External power supply is not provided with the board.
- 5V DC power with 500 mA limitation from CN13, the USB type B connector of ST-LINK/V2 (USB 5 V power source (STIk) on silkscreen).
- 5V DC power from CN6, the extension connector for daughterboard (daughterboard power source (D5V) on silkscreen).

The power source is selected by setting the related jumpers JP8 as described in [Table 3](#).

Table 3. Power source related jumpers

Jumper	Description
JP8	JP8 selects one of the three possible power supply resources. For the power supply jack (CN15) to STM320518-EVAL only, JP8 is set as shown: <div style="float: right; text-align: right;"> STIk D5V PSU </div> 
	For power supply from the daughterboard connectors (CN6) to STM320518-EVAL only, JP8 is set as shown: <div style="float: right; text-align: right;"> STIk D5V PSU </div> 
	For power supply from USB (CN13) of ST-LINK/V2 to STM320518-EVAL only, JP8 is set as shown (default setting): <div style="float: right; text-align: right;"> STIk D5V PSU </div> 
	For power supply from the power supply jack (CN15) to both STM320518-EVAL and daughterboard connected on CN5 and CN6, JP8 is set as shown (the daughterboard must not have its own power supply connected): <div style="float: right; text-align: right;"> STIk D5V PSU </div> 

Table 3. Power source related jumpers (continued)

Jumper	Description
JP12	The Vbat pin of STM32F051R8T6 is connected to VDD when JP12 is set as shown (default setting): 
	The Vbat pin of STM32F051R8T6 is connected to a 3 V battery when JP12 is set as shown: 

A total of three power modes are supported on the board and can be configured by setting the related jumpers **JP7, JP9, JP10 and JP11** as described in [Table 4](#) and its related notes.

- Mode1: the VDD and VDDA are connected together and powered by a fixed 3.3 V.
- Mode2: the VDD and VDDA are connected together and powered by an adjustable voltage ranging from 2.0 V to 3.6 V.
- Mode3: the VDD is powered by an adjustable voltage ranging from 2.0 V to 3.6 V while VDDA is powered by a fixed 3.3 V.

Table 4. Power mode related jumpers

Power mode	Power mode configuration		MCU IDD measurement
	JP9	JP10	
Mode1			OK
			Not allowed
Mode2			OK
Mode3			Not allowed

Note: MCU IDD measurement can be done with a current meter mounted on JP7 when it is open.

Note: Jumper JP11 must be open (to disconnect VDDA from all analog power VDD_ANA which is connected to the analog circuits on the board) for MCU Idd measurement.

The LED LD6 is lit when the STM320518-EVAL evaluation board is correctly powered by 5 V.

2.3 Clock source

Two clock sources are available on the STM320518-EVAL evaluation board for STM32F051R8T6 and RTC embedded.

- X1, 8 MHz crystal with a socket for the STM32F051R8T6 microcontroller. It can be removed from the socket when the internal RC clock is used.
- X2, 32 kHz crystal for embedded RTC.

Table 5. 8 MHz crystal X1 related solder bridges

Jumper	Description
SB13	PF0 is connected to an 8 MHz crystal when SB13 is open (default setting).
	PF0 is connected to an extension connector CN6 when SB13 is closed. In such a case, C34 and X1 must be removed.
SB14	PF1 is connected to an 8 MHz crystal when SB14 is open (default setting).
	PF1 is connected to an extension connector CN6 when SB14 is closed. In such a case, R59 must be removed to avoid disturbance due to the 8 MHz quartz.

Table 6. 32 kHz crystal X2 related solder bridges

Jumper	Description
SB9	PC14 is connected to a 32 kHz crystal when SB9 is open (default setting).
	PC14 is connected to an extension connector CN5 when SB9 is closed. In such a case, R57 must be removed to avoid disturbance due to the 32 kHz quartz.
SB10	PC15 is connected to a 32 kHz crystal when SB10 is open (default setting).
	PC15 is connected to an extension connector CN5 when SB10 is closed. In such a case, R58 must be removed to avoid disturbance due to the 32 kHz quartz.

2.4 Reset source

The reset signal of the STM320518-EVAL evaluation board is low active and the reset sources include the following.

- Reset button B1
- Debugging tools from SWD connector CN10 and CN9
- Daughterboard from CN6
- Embedded ST-LINK/V2
- RS232 connector CN7 for ISP.

Note: The jumper JP6 is to be closed for RESET handled by pin8 of the RS-232 connector CN7 (CTS signal). Refer to [Section 2.7](#) information.

2.5 Boot option

The STM320518-EVAL evaluation board can boot from:

- Embedded User Flash
- System memory with boot loader for ISP
- Embedded SRAM for debugging

The boot option is configured by setting switch SW1 (BOOT0) and one Option bit in the Small Information block (SIF). The BOOT0 can also be configured via the RS-232 connector CN7.

Table 7. Boot related switch

Switch configuration	Bit12 in USER OPTION BYTES	Boot source
0 <-> 1 	X	STM320518-EVAL boot from User Flash when SW1 and Bit12 in User OPTION bytes set as shown to the left (default setting).
0 <-> 1 	0	STM320518-EVAL boot from Embedded SRAM when SW1 and Bit12 in User OPTION bytes set as shown to the left.
0 <-> 1 	1	STM320518-EVAL boot from System Memory when SW1 and Bit12 in User OPTION bytes set as shown to the left.

Table 8. Boot0 related jumpers

Jumper	Description
JP5	The Bootloader_BOOT0 is managed by pin 6 of connector CN7 (RS-232 DSR signal) when JP5 is closed. This configuration is used for the boot loader application only. Default Setting: Not fitted

2.6 Audio

The STM320518-EVAL evaluation board supports a speaker that is connected to the DAC output of the STM32F051R8T6 through an audio amplifier and microphone, which is in turn connected to the ADC input of the STM32F051R8T6 through a microphone amplifier. The speaker can be enabled or disabled by setting JP13 ([Table 9](#)).

Table 9. Audio related jumpers

Jumper	Description
JP13	Speaker amplifier U17 is enabled when JP13 is open (default setting).
	Speaker amplifier U17 is disabled when JP13 is closed.

2.7 RS-232, RS-485 and IrDA

The RS-232 (with hardware flow control CTS and RTS), RS-485 and IrDA communication is supported by D-type 9-pin RS-232/RS-485 connectors CN7, and IrDA transceiver U1 which is connected to USART1 of the STM32F051R8T6 on the STM320518-EVAL evaluation board. The signal Bootloader_RESET (shared with the CTS signal) and Bootloader_BOOT0 (shared with the DSR signal) are added to the RS-232 connector CN7 for ISP support.

Table 10. RS-232 and IrDA related jumpers

Jumper	Description																		
JP3	RS232_RX is connected to the RS-232 transceiver and RS-232 communication is enabled when JP3 is set as shown (default setting): <div style="text-align: right; margin-top: 10px;"> <table style="border-collapse: collapse;"> <tr> <td style="padding-right: 5px;">RS232_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> <tr> <td style="padding-right: 5px;">RS485_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> <tr> <td style="padding-right: 5px;">IrDA_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> </table> </div>	RS232_RX	●		●		●	RS485_RX	●		●		●	IrDA_RX	●		●		●
	RS232_RX	●		●		●													
	RS485_RX	●		●		●													
IrDA_RX	●		●		●														
RS485_RX is connected to the RS-485 transceiver and RS-485 communication is enabled when JP3 is set as shown: <div style="text-align: right; margin-top: 10px;"> <table style="border-collapse: collapse;"> <tr> <td style="padding-right: 5px;">RS232_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> <tr> <td style="padding-right: 5px;">RS485_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> <tr> <td style="padding-right: 5px;">IrDA_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> </table> </div>	RS232_RX	●		●		●	RS485_RX	●		●		●	IrDA_RX	●		●		●	
RS232_RX	●		●		●														
RS485_RX	●		●		●														
IrDA_RX	●		●		●														
IrDA_RX is connected to the IrDA transceiver and IrDA communication is enabled when JP3 is set as shown: <div style="text-align: right; margin-top: 10px;"> <table style="border-collapse: collapse;"> <tr> <td style="padding-right: 5px;">RS232_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> <tr> <td style="padding-right: 5px;">RS485_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> <tr> <td style="padding-right: 5px;">IrDA_RX</td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> <td style="padding: 0 5px;"> </td> <td style="text-align: center;">●</td> </tr> </table> </div>	RS232_RX	●		●		●	RS485_RX	●		●		●	IrDA_RX	●		●		●	
RS232_RX	●		●		●														
RS485_RX	●		●		●														
IrDA_RX	●		●		●														
JP4	PA11 is connected to the RS-232 transceiver as RS232_CTS when JP4 is set as shown (default setting): <div style="text-align: right; margin-top: 10px;"> <table style="border-collapse: collapse;"> <tr> <td style="padding-right: 5px;">1</td> <td style="padding-right: 5px;">2</td> <td style="padding-right: 5px;">3</td> </tr> <tr> <td style="text-align: center;">●</td> <td style="text-align: center;">●</td> <td style="text-align: center;">●</td> </tr> </table> </div>	1	2	3	●	●	●												
	1	2	3																
●	●	●																	
PA11 is connected to the HDMI_Sink connector as HPD when JP4 is set as shown: <div style="text-align: right; margin-top: 10px;"> <table style="border-collapse: collapse;"> <tr> <td style="padding-right: 5px;">1</td> <td style="padding-right: 5px;">2</td> <td style="padding-right: 5px;">3</td> </tr> <tr> <td style="text-align: center;">●</td> <td style="text-align: center;">●</td> <td style="text-align: center;">●</td> </tr> </table> </div>	1	2	3	●	●	●													
1	2	3																	
●	●	●																	

The RS-485 communication is supported by the RS-485 transceiver ST485ABDR, which is connected to pin4 and pin9 of the D-type 9-pin connectors CN7 (that share the same connector as USART1).

Table 11. RS-485 related solder bridges

Jumper	Description
SB11,SB12	The external failsafe biasing are enabled when solder bridges SB11 and SB12 are closed. Default setting: not fitted
SB8	The bus termination is enabled when solder bridge SB8 is closed. Default setting: not fitted
SB16	The AC termination is disabled when solder bridge SB16 is closed for high baud rate communication. Default setting: not fitted

2.8 Linear sensor

The linear sensor is supported on the STM320518-EVAL evaluation board and connected to four capacitive sensing channels (PB[11:14]) in group6 with an active shield connected to two capacitive sensing channels (PC5 and PB0) in group3.

Note: The linear sensor is only fully functional when the STM320518-EVAL is powered on power mode 1 (both VDD and VDDA are connected to a fixed 3.3 V). It is potentially necessary to adjust the capacitor value of C14 and C15 and the firmware to adapt them to the voltage range from 2 V to 3.6 V of VDD on power modes 2 and 3.

2.9 MicroSD card

The 2 GB (or more) MicroSD card connected to the SPI1 port of the STM32F051R8T6 is available on the board. MicroSD card detection is managed by the standard IO port PB15.

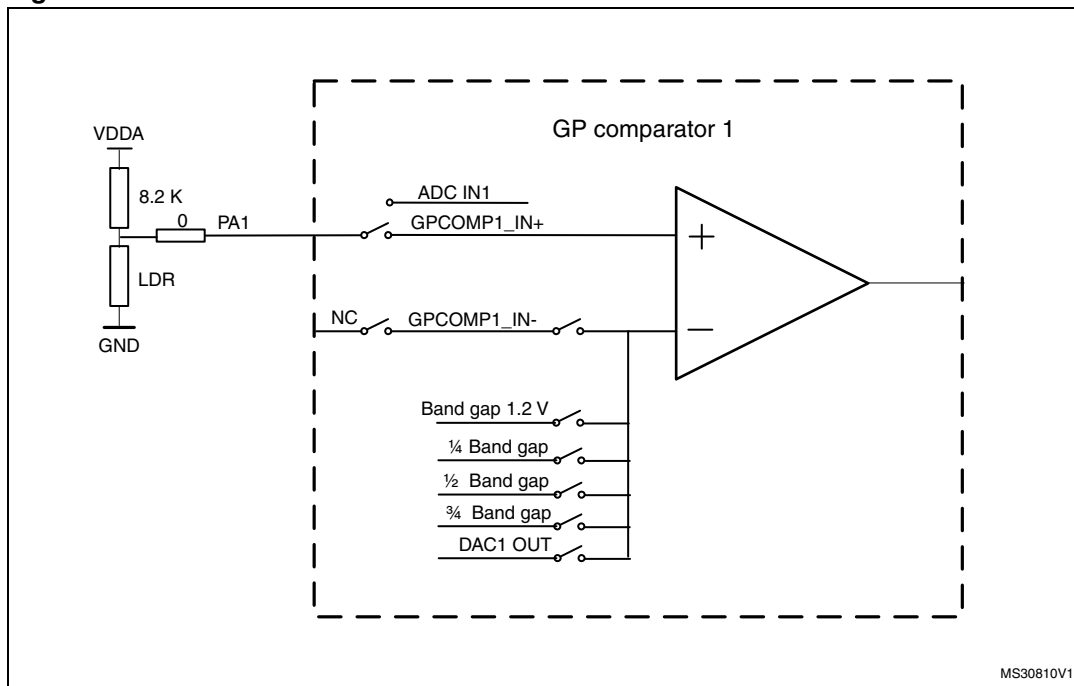

2.10 Analog input

The two-pin header CN8 and 10 kohm potentiometer RV3 are connected to PC1 of the STM32F051R8T6 as an analog input. A low-pass filter can be implemented by replacing R60 and C36 with the correct resistor and capacitor values as required by the end-user application.

2.11 LDR (light dependent resistor)

The VDDA is divided by the resistor bridge of the LDR VT9ON1 and 8.2 K resistor. It is connected to PA1 (COM1_IN+/ADC IN1) as shown in [Figure 4](#).

Figure 4. STM320518-EVAL evaluation board

It is possible to compare the LDR output with 1/4 band gap, 1/2 band gap, 3/4 band gap, band gap and DAC1 OUT, and to connect the LDR output to ADC IN1 for AD conversion.

2.12 Temperature sensor

A temperature sensor STLM75M2E is connected to the I2C1 bus of the STM32F051R8T6. It shares the same I2C1 bus as the RF E2PROM and DDC on the HDMI_Source connector CN4.

2.13 Display and input devices

The 2.4 inch color TFT LCD connected to the SPI1 port of the STM32F051R8T6 and four general-purpose color LEDs (LD 1, 2, 3 and 4) are available as display devices. The 4-direction joystick (U21) with selection key connected to PA0 and support wakeup feature and tamper button (B2) are available as input devices.

Table 12. LCD modules

2.4-inch TFT LCD connector CN16					
Pin	Description	Pin connection	Pin	Description	Pin connection
1	CS	PF4	9	VDD	3.3 V
2	SCL	PA5	10	VCI	3.3 V
3	SDI	PA7	11	GND	GND
4	RS	-	12	GND	GND
5	WR	-	13	BL_VDD	5 V

Table 12. LCD modules (continued)

2.4-inch TFT LCD connector CN16					
Pin	Description	Pin connection	Pin	Description	Pin connection
6	RD	-	14	BL_Control	5 V
7	SDO	PB4	15	BL_GND	GND
8	RESET	RESET#	16	BL_GND	GND

Note: The bi-directional voltage translator is implemented on the SPI MOSI signal between the STM32F051R8T6 and the LCD to support the 3-wire serial interface of the AM240320LGTNqw-01H LCD panel. The direction of this voltage translator is controlled by IO PB2 (the IO PA7 acts as MOSI when PB2 is high or as MISO when PB2 is LOW).

2.14 RF E2PROM

An RF E2PROM module ANT7-M24LR-A is mounted on connector CN2 and is connected to the I2C1 bus of the STM32F051R8T6. It shares the same I2C1 bus as the temperature sensor U8 and DDC on the HDMI_Source connector CN4.

2.15 HDMI CEC

Two HDMI connectors CN3 and CN4 are available on the STM320518EVAL board.

- Connector CN3 is an HDMI sink connector with:
 - DDC connected to I2C2 of the STM32F051R8T6
 - HPD controlled by I/O PA11 through transistor T3
 - CEC connected to PB10 through transistor T4
- Connector CN4 is an HDMI source connector with:
 - DDC connected to I2C1 of the STM32F051R8T6 and shared with the temperature sensor and RF E2PROM
 - HPD controlled by I/O PA8
 - CEC connected to PB10 through transistor T4
 - 5V HDMI powered by power switch U5

Signals TDMS D+[0,1,2], TDMS_CLK+, TDMS D-[0,1,2] and TDMS_CLK are connected together on these two HDMI connectors.

CEC injector mode can be enabled by reworking the PCB (for debugging purposes only):

- Remove resistors R63, R66, R23, R62, R68, R51 and R13.
- Close solder bridges SB4, SB5, SB6 and SB7.

Note: The I/O PA11 must be set in open-drain output mode by firmware for HPD signal control on the HDMI sink connector CN3.

2.16 IR LED and IR receiver

The IR receiver TSOP34836 is connected to PB3 of the STM32F051R8T6 and a current around 100 mA on the IR LED is driven by PB9 through transistors T1 and T2 on the board.

Note: The IR LED may be driven by PB9 directly with a 20 mA current when SB3 is closed and R11 is removed.

2.17 Motor control

The STM320518-EVAL evaluation board supports both asynchronous and synchronous three-phase brushless motor control via a 34-pin connector CN1. This connector provides all required control and feedback signals to and from the motor power-driving board. Available signals on this connector include emergency stop, motor speed, 3-phase motor current, bus voltage, heatsink temperature coming from the motor driving board and six channels of the PWM control signal going to the motor driving circuit.

Some PCB reworks are required for the motor control application to disconnect peripherals that share IOs with the motor control connector. These IOs need to be connected to the motor control connector.

- Remove resistors R89, R52, R19, R55, R32, R38, R42, R88, R83, R20, R36, R18 and R50.
- Mount R25, R29, R30, R39, R4, R35, R37, R44, R22 and R41 with a 0 ohm resistor.

All resistors to be removed are marked in red while resistors to be soldered are marked in green in [Figure 5](#).

Figure 5. STM320518-EVAL evaluation board motor control PCB reworks

The RS-232 connector CN7 is re-connected to USART1 on the IOs PB6 and PB7 instead of PA9 and PA10 for the motor control application.

Table 13. Motor control related jumpers

Jumper	Description
JP2	<p>The special motor current sampling operation is enabled when JP2 is fitted (PB0 connected to PA12). The IO pins PB0 and PA12 are disconnected and can be used by the daughterboard when JP2 is not fitted.</p> <p>Default setting: not fitted</p>
JP1	<p>JP1 should be kept open when the encoder signal is from pin31 of the motor control connector CN1, while it should be kept closed when the analog signal is from pin31 of CN1 for special motors.</p> <p>Default setting: not fitted</p>
SB1	<p>Pin17 of the motor connector CN1 is connected to PA3 as MC_currentB2 when SB1 is closed.</p> <p>Default setting: open</p>
SB2	<p>Pin1 of the motor connector CN1 is connected to PA3 as MC_EmergencySTOP2 when SB2 is closed.</p> <p>Default setting: open</p>

Note: The solder bridges SB1 and SB2 cannot be closed at the same time.

3.5 Daughterboard extension connector CN5 and CN6

Two 34-pin male headers CN5 and CN6 can be used to connect with the daughterboard or standard wrapping board to the STM320518-EVAL evaluation board. All GPIOs are available on it. The space between these two connectors and the position of the power, GND and RESET pins is defined as a standard that allows to develop common daughterboards for several evaluation boards.

The standard width between CN5 pin1 and CN6 pin1 is 2700 mils (68.58 mm). This standard has been implemented on the majority of evaluation boards.

Each pin on CN5 and CN6 can be used by a daughterboard after disconnecting it from the corresponding function block on the STM320518-EVAL evaluation board. Details are provided in [Table 18](#) and [Table 19](#).

Table 18. Daughterboard extension connector CN5

Pin	Description	Alternative function	How to disconnect from the function block on STM320518-EVAL board

3.10 Audio jack CN11

A 3.5 mm stereo audio jack CN11 connected to the audio DAC is available on the STM320518-EVAL board.

3.11 ST-LINK/V2 programming connector CN12

The connector CN12 is used only for embedded ST-LINK/V2 programming during board manufacture. It is not populated by default and is not intended for the end user.

3.12 ST-LINK/V2 USB type B connector CN13

The USB connector CN13 is used to connect the embedded ST-LINK/V2 to a PC for debugging purposes.
