Intel FPGA and Custom Logic Solutions Portfolio

Intel delivers a broad portfolio of custom logic solutions — FPGAs, SoCs, structured ASICs, and CPLDs—together with software tools, intellectual property (IP), embedded processors, customer support, and technical training. Intel's product leadership, excellent value, and superior quality of service give you a measurable advantage. Bring your great ideas to life faster, better, and more cost effectively.

FPGAs, Structured ASICs, and CPLDs

Intel FPGAs and CPLDs give you the flexibility to innovate, differentiate, and stay ahead in the market. We have five classes of FPGAs to meet your market needs, from the industry's highest density and performance to the most cost effective.

Intel Agilex FPGAs

The Intel Agilex FPGA family, built on 10 nm SuperFin technology (F-Series and I-Series) and Intel 7 technology (M-Series), enables customized acceleration and connectivity for a wide range of compute and bandwidth intensive applications, while providing an improvement in performance and reduction in power.

Intel Cyclone Series

The Intel Cyclone FPGA series is built to meet your low-power, cost-sensitive design needs, enabling you to get to market faster.

Intel Stratix Series

The Intel Stratix FPGA and SoC family enables you to deliver high-performance, state-of-the-art products to market faster with lower risk and higher productivity.

Intel MAX Series

The Intel MAX 10 FPGAs revolutionize non-volatile integration by delivering advanced processing capabilities in a low-cost, single-chip small form.

Intel Arria Series

The Intel Arria device family delivers performance and power efficiency in the midrange.

Intel eASIC Devices

Intel eASIC structured ASIC devices complete the gap between FPGA and ASIC by delivering lower power and lower unit price versus FPGAs and lower non-recurring engineering (NRE) and faster time to market versus standard cell ASICs.

Acceleration Platform or Card Solutions

Intel FPGA-based acceleration platforms or cards enable a scalable volume deployment of various workloads in edge, network, cloud, enterprise, and other types of data center environment through Intel FPGA Programmable Acceleration Cards (Intel FPGA PACs) and development software, such as the Intel Acceleration Stack for Intel Xeon CPU with FPGAs and the OpenVINO™ toolkit.

Productivity-Enhancing Design Software, Embedded Processing, IP, Development Kits, and Training

With Intel, you get a complete design environment and a wide choice of design tools—all built to work together so your designs are up and running fast. You can try one of our training classes to get a jump-start on your designs. Choose Intel and see how we enhance your productivity and make a difference to your bottom line.

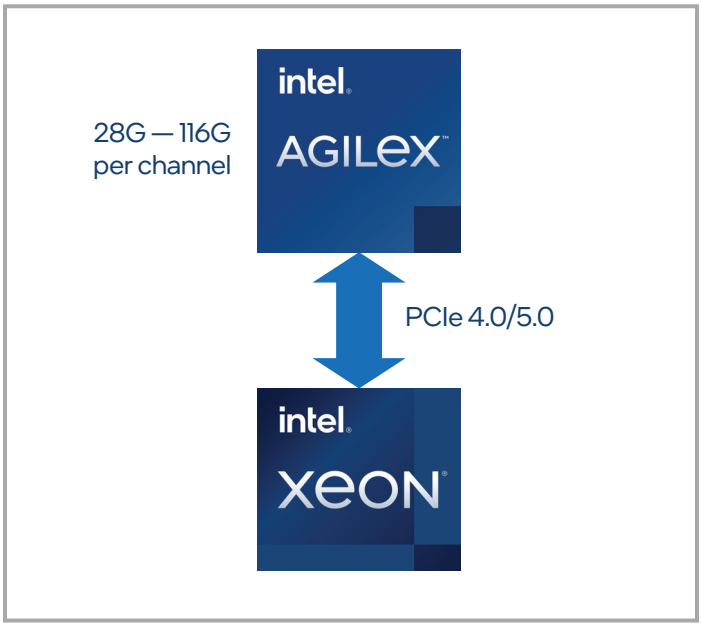
Intel Agilex FPGA and SoC Overview

www.intel.com/agilex

The Intel Agilex FPGA family leverages the full breadth of Intel innovation and manufacturing capability. Built with advanced 10 nm SuperFin technology (F-Series and I-Series), Intel 7 technology (M-Series), and a second-generation Intel® Hyperflex™ FPGA Architecture, Intel Agilex devices deliver ~2X better fabric performance per watt compared to competing 7 nm FPGAs. Intel Agilex devices also offer integrated Arm-based processors, up to 116G transceivers, PCI Express (PCIe) 5.0, Compute Express Link (CXL), and support for Intel® Optane™ Persistent Memory. These features make them ideal for a wide range of applications in many markets including data center, networking, broadcast, defense, and industrial.

INTEL AGILEX F-SERIES FPGAs AND SoCs	INTEL AGILEX I-SERIES SoC FPGAs	INTEL AGILEX M-SERIES SoC FPGAs
Intel Agilex F-Series devices are general purpose FPGAs built on Intel 10 nm SuperFin process technology. With features including transceiver rates up to 58 Gbps, advanced digital signal processing (DSP) blocks supporting multiple precisions of fixed-point and floating-point operations, and high-performance crypto blocks, they are ideal for a wide range of applications across many markets.	Intel Agilex I-Series devices offer the highest-performance I/O interfaces to address bandwidth-intensive applications. Manufactured on Intel 10 nm SuperFin process technology, this series builds upon Intel Agilex F-Series device features offering transceiver rates up to 116 Gbps, PCIe 5.0 support, and cache- and memory-coherent attach to processors with CXL.	Intel Agilex M-Series devices are optimized for compute- and memory-intensive applications. Leveraging Intel 7 process technology, this series builds upon Intel Agilex I-Series device features offering an extensive memory hierarchy including integrated high-bandwidth memory (HBM) and high-efficiency interfaces to DDR5 memory with a hard memory Network-on-Chip (NoC) to maximize memory bandwidth.

Efficient Network Transformation



Datapath Acceleration

VNF Performance Optimization

- Load balancing
- Data integrity
- Network translation

Significant Improvements

- Throughput
- Jitter
- Latency

Infrastructure Offload

Optimized Architecture

- SmartNIC
- vRouter
- Security

Small Form Factor and Low Power

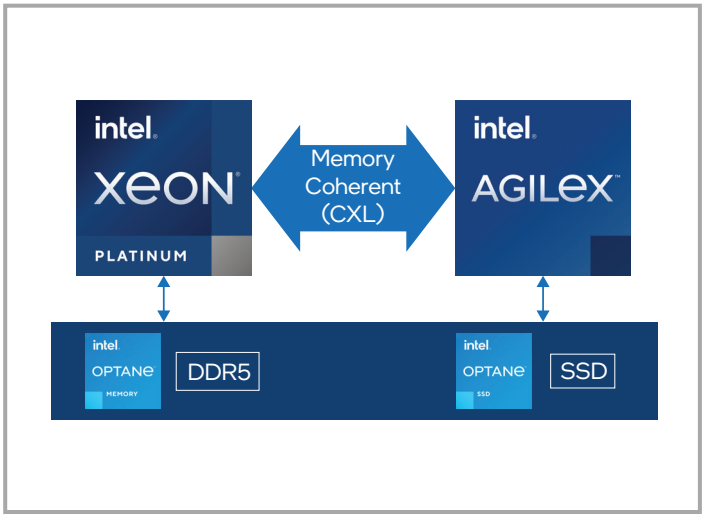
- Wide range of servers

Product and Performance Information:

[1] This comparison is based on the Intel Agilex FPGA and SoC family vs. Intel Stratix 10 FPGA family using simulation results and is subject to change. This document contains information on products, services and/or processes in development. All information provided here is subject to change without notice. Contact your Intel representative to obtain the latest forecast, schedule, specifications, and roadmaps.

Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Learn more at intel.com, or from the OEM or retailer. No computer system can be absolutely secure. Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors.

Converged Workload Acceleration for the Data Center

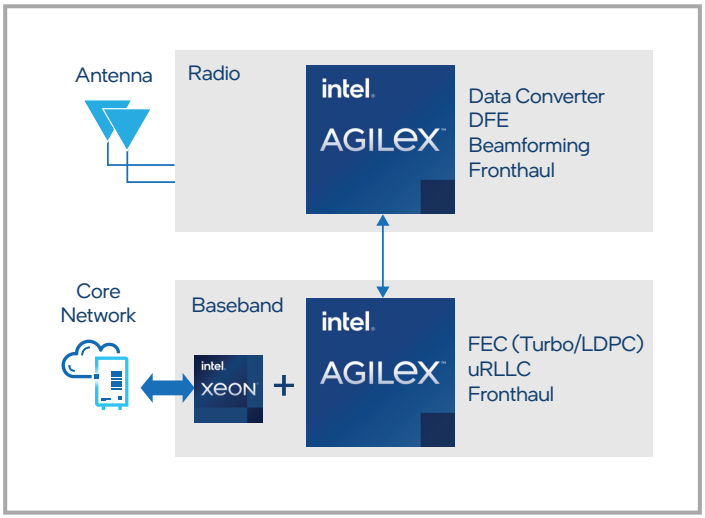


Infrastructure Acceleration
- Network
- Security
- Remote memory access

Application Acceleration
- Artificial intelligence (AI)
- Search
- Video transcode
- Database
- 40 TFLOPs of DSP performance[1]

Storage Acceleration
- Compression
- Decompression
- Encryption
- Memory hierarchy management

Agility and Flexibility for All Stages of 5G Implementation



Custom Logic Continuum

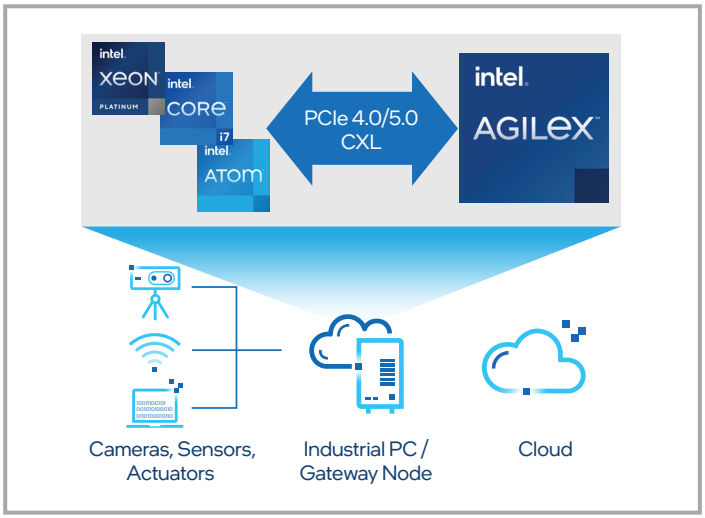
FPGA Flexibility
- High flexibility
- Short time to market

Rapid Intel eASIC Device Optimization
- Power and cost optimization

Full Custom ASIC Optimization
- Best power[1]
- Best performance[1]
- Best cost[1]

Application-Specific Tile Options
- Data converter
- Vector engine
- Custom compute

Smart, Safe, and Secure Factory Acceleration



Acceleration and Analytics
- In-line protocol acceleration
- Look-aside application acceleration

Safety and Security
- Secure boot
- Encryption
- Authentication

Customized Connectivity
- Time-sensitive networks
- Flexible I/O

	M20K memory blocks	2,844	3,792	5,900	7,110	8,500	10,900	10,464	13,272
	M20K memory size (Mb)	56	74	115	139	166	212	204	259
	MLAB memory count	9,720	12,960	19,975	24,360	32,525	37,425	39,120	45,640
	MLAB memory size (Mb)	6	8	12	15	20	23	24	28
	I/O PLL	12	12	16	16	10	16	10	16
	Variable-precision digital signal processing (DSP) blocks	1,640	2,296	3,743	4,510	1,354	6,250	1,640	8,528
	18 x 19 multipliers	3,280	4,592	7,486	9,020	2,708	12,500	3,280	17,056
	Single-precision or half-precision tera floating point operations per second (TFLOPS)	2.5 / 5.0	3.5 / 6.9	6.0 / 12.0	6.8 / 13.6	2.0 / 4.0	9.4 / 18.8	2.5 / 5.0	12.8 / 25.6
	Maximum EMIF x72	2	2	4	4	2	4	2	4
Maximum Available Device Resources	Maximum differential (RX or TX) pairs	192	288	384	384	240	384	240	384
	AIB interfaces	2	2	2	2	4	4	4	4
	Memory devices supported	DDR4, QDR IV							
	Secure data manager	AES-256/SHA-256 bitstream encryption/authentication, physically unclonable function (PUF), ECDSA 256/384 boot code authentication, side-channel attack protection							
	Hard processor system	Quad-core 64 bit Arm Cortex-A53 up to 1.50 GHz with 32 KB I/D cache, NEON coprocessor, 1 MB L2 cache, direct memory access (DMA), system memory management unit, cache coherency unit, hard memory controllers, USB 2.0x2, 1G EMAC x3, UART x2, serial peripheral interface (SPI) x4, I2C x5, general purpose timers x7, watchdog timer x4							
Tile Resources	F-Tile	PCI Express (PCIe) hard IP block (4.0 x16) or bifurcateable 2x PCIe 4.0 x8 (EP) or 4x 4.0 x4 (RP) Transceiver channel count : 16 channels at 32 Gbps (NRZ) /12 channels at 58 Gbps (PAM4) - RS & KP FEC Advanced networking support: - Bifurcateable 400 GbE hard IP block (10/25/50/100/200/400 GbE FEC/PCS/MAC) - Bifurcateable 200 Gb hard IP block (10/25/50/100/200 Gbps FEC/PCS) 300G Interlaken IEEE 1588 v2 support PMA direct							
	E-Tile	Transceiver channel count : Up to 24 channels at 28.9 Gbps (NRZ) / 12 channels at 58 Gbps (PAM4) - RS & KP FEC[1] Networking support : - 400GbE (4 x 100GbE hard IP blocks (10/25 GbE FEC/PCS/MAC)) IEEE 1588 v2 support PMA direct							
	P-Tile	PCIe hard IP block (4.0 x16) or bifurcateable 2x PCIe 4.0 x8 (EP) or 4x 4.0 x4 (RP) SR-IOV 8PF / 2kVF VirtIO support Scalable IOV							

PRODUCT LINE	AGF 006	AGF 008	AGF 012	AGF 014	AGF 019	AGF 022	AGF 023	AGF 027
F- Tile - Package Options and I/O Pins					**GPIO (LVDS) / F-Tile 32G NRZ (58G PAM4)**			
1546A (F-Tile x2) (37.5 mm x 34 mm, 0.92 mm Hex)	384(192)/ 32(24)	384(192)/ 32(24)						
2340A (F-Tile x2) (45 mm x 42 mm, 0.92 mm Hex)	576 (288)/ 32(24)	576 (288)/ 32(24)	744(372)/ 32(24)	744(372)/ 32(24)	480(240)/ 32(24)	744(372)/ 32(24)	480(240)/ 32(24)	744(372)/ 32(24)
3184C (F-Tile x4) (56 mm x 45 mm, 0.92 mm Hex)					480(240)/ 64(48)	720(360)/ 64(48)	480(240)/ 64(48)	720(360)/ 64(48)
E-Tile and P-Tile - Package Options and I/O Pins					**GPIO (LVDS) / E-Tile 28.9G NRZ (57.8G PAM4) / P-Tile 16G PCIe**			
2486A (E-Tile x1 & P-Tile x1) (55 mm x 42.5 mm, 1.0 mm Hex)			768(384)/ 16(8)/16	768(384)/ 16(8)/16				
2581A (E-Tile x1 & P-Tile x2) (50 mm x 40.5 mm, 0.92/0.94 mm Hex)[2]					480(240)/ 24(12)/32	624(312)/ 24(12)/32	480(240)/ 24(12)/32	624(312)/ 24(12)/32

Notes:
1. Only 4 instances of KP-FEC are supported when using 100GE MAC.
2. Conditional migration path from AGF 019/023 to AGF 022/027 devices.

PRODUCT LINE	AGM 032	AGM 039
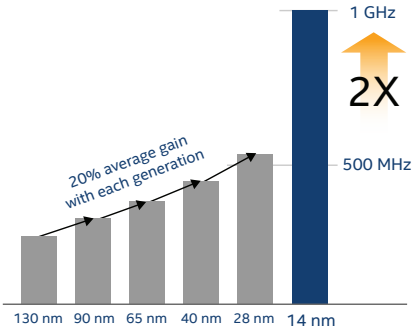
Package Options (HBM2e Packages)	GPIO (LVDS) / F-Tile 32G NRZ (58G PAM4) / High Speed transceiver 58G NRZ (116G PAM4) / R- Tile 32G PCIe (CXL) lanes	
4700A (F-Tile x3, R-Tile x1, HBM2e) (56 mm x 66 mm, 0.92 mm Hex)	768(384) / 48(36) / 8(8) / 16(16)	768(384) / 48(36) / 8(8) / 16(16)
4700B (F-Tile x4, HBM2e) (56 mm x 66 mm, 0.92 mm Hex)	768(384) / 64(48) / 8(8)	768(384) / 64(48) / 8(8)

Generation 10 FPGAs and SoCs

Intel's Generation 10 FPGAs and SoCs are optimized based on process technology and architecture to deliver the industry's highest performance and highest levels of system integration at the lowest power. Generation 10 device families include Intel Stratix 10 FPGAs and SoCs, Intel Arria 10 FPGAs and SoCs, Intel Cyclone 10 FPGAs, and Intel MAX 10 FPGAs.

Intel® Stratix® 10

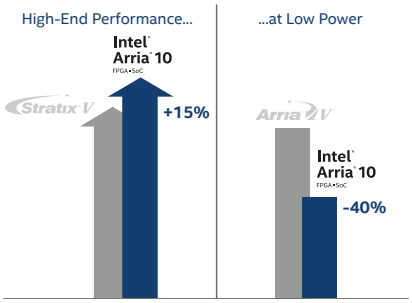
FPGA ▪ SoC



- 2X core performance with revolutionary Intel Hyperflex FPGA Architecture†
- Up to 70% power savings†
- Highest density FPGA with up to 10.2 M logic elements (LEs)
- 64 bit quad-core Arm Cortex-A53 processor system
- Up to 10 tera floating point operations per second (TFLOPS) single-precision floating-point throughput
- Built on Intel's 14 nm Tri-Gate process technology

Intel® Arria® 10

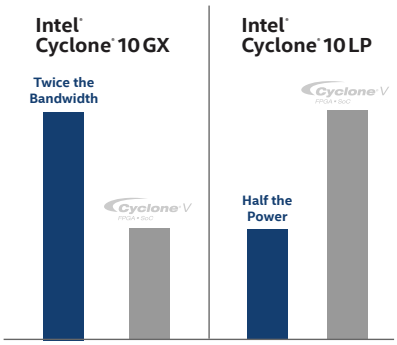
FPGA ▪ SoC



- 15% higher performance than the previous high-end devices†
- 40% lower midrange power†
- 1.5 GHz dual-core Arm Cortex-A9 processor
- IP core support, including 100G Ethernet, 150G/300G Interlaken, and PCI Express 3.0
- Built on TSMC's 20 nm process technology

Intel® Cyclone® 10

FPGA



Intel Cyclone 10 GX

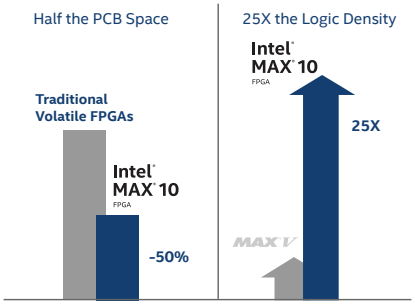
- Optimized for high-bandwidth, high-performance applications
- The industry's first low-cost FPGA with 12.5 Gbps transceiver I/O support
- High-performance 1,866 Mbps external memory interface
- 1.434 Gbps LVDS I/Os
- The industry's first low-cost FPGA with IEEE 754 compliant hard floating-point DSP blocks

Intel Cyclone 10 LP

- Optimized for cost and power-sensitive applications
- Chip-to-chip bridging
- I/O expansion
- Control applications

Intel® MAX® 10

FPGA



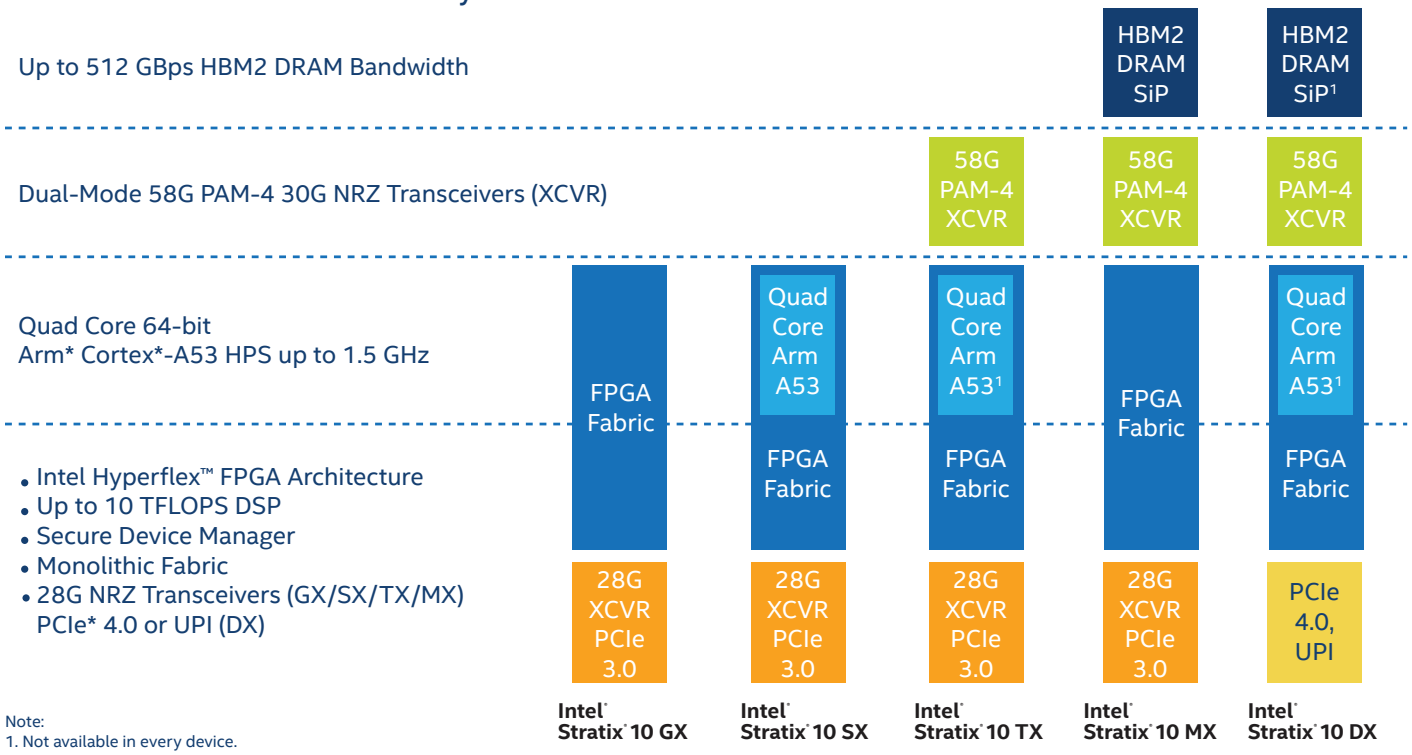
- Single-chip, dual-configuration non-volatile FPGA
- Optimal system component integration for half the PCB space of traditional volatile FPGAs
- Broad range of IP including analog-to-digital converters (ADCs), DSP, and the Nios II embedded soft processor

Intel Stratix 10 FPGA and SoC Overview

www.intel.com/stratix10

Intel FPGAs and SoCs deliver breakthrough advantages in performance, power efficiency, density, and system integration that are unmatched in the industry. Featuring the revolutionary Intel Hyperflex FPGA Architecture and built on the Intel 14 nm Tri-Gate process, Intel Stratix 10 devices deliver 2X core performance gains over previous-generation, high-performance FPGAs with up to 70% lower power†.

Intel® Stratix® 10 Device Family Variants



Note:
1. Not available in every device.

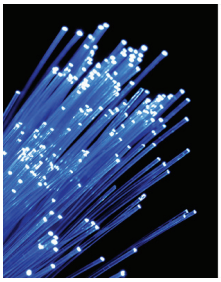
The figure above shows the core performance benchmarks achieved by early access customers using the Intel Stratix 10 Hyperflex FPGA architecture. With the 2X performance increase, customers in multiple end markets can achieve significant improvements in both throughput and area utilization, with up to 70% lower power†.

Intel Stratix 10 FPGA and SoC system integration breakthroughs include:

- Heterogeneous 3D system in package (SiP) integration
- The highest density FPGA fabric with up to 10.2 million LEs
- Up to 10 TFLOPS of IEEE 754 compliant single-precision floating-point DSP throughput
- Secure Device Manager (SDM) with the most comprehensive security capabilities
- Integrated quad-core 64 bit Arm Cortex-A53 hard processor system up to 1.5 GHz
- Dual-mode 28.9 Gbps non-return-to-zero (NRZ) and 57.8 Gbps PAM-4 transceivers
- HBM2 DRAM SiP delivering up to 512 GBps of memory bandwidth

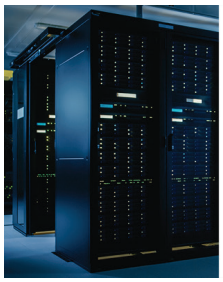
These unprecedented capabilities make Intel Stratix 10 devices uniquely positioned to address the design challenges in next-generation, high-performance systems in virtually all end markets including wireline and wireless communications, computing, storage, military, broadcast, medical, and test and measurement.

Communications



- 400G/500G/1T optical transmission
- 200G/400G bridging and aggregation
- 982 MHz remote radio head
- Mobile backhaul
- 5G wireless communications

Computing and Storage

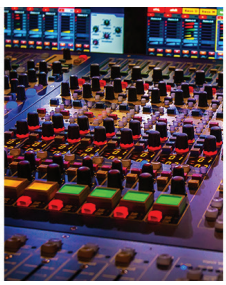


- Data center server acceleration
- High-performance computing (HPC)
- Oil and gas exploration
- Bioscience

Defense

- Next-generation radar
- Secure communications
- Avionics and guidance systems

Broadcast



- High-end broadcast studio
- High-end broadcast distribution
- Headend encoder or EdgeQAM or converged multiservice access platform (CMAP)

F4938 pin (70 mm x 74 mm, 1.0 mm pitch)												2304, 32, 1152, 48

Notes:
1. LE counts valid in comparing across Intel FPGAs, and are conservative vs. competing FPGAs.
2. Fixed point performance assumes the use of pre-adder.
3. Floating point performance is IEEE-754 compliant single-precision.
4. Quad-core Arm Cortex-A53 hard processor system only available in Intel Stratix 10 SX SoCs.
5. 1.4 Gbps LVDS maximum rate for GX 10M.
6. PCIe 3.0 x 8 support for GX 10M.
7. A subset of pins for each package are used for high-voltage 3.0 V and 2.5 V interfaces.
8. All data is preliminary and subject to change without prior notice.

392,8,192,24 Numbers indicate total GPIO count, high-voltage I/O count, LVDS pairs, and transceiver count.

Indicates pin migration path.

PRODUCT LINE	HARD PROCESSOR SYSTEM (HPS)
Processor	Quad-core 64 bit Arm Cortex-A53 MPCore processor
Maximum processor frequency	1.5 GHz[1]
Processor cache and co-processors	• L1 instruction cache (32 KB) • L1 data cache (32 KB) with error correction code (ECC) • Level 2 cache (1 MB) with ECC • Floating-point unit (FPU) single and double precision • Arm NEON media engine • Arm CoreSight debug and trace technology • System Memory Management Unit (SMMU) • Cache Coherency Unit (CCU)
Scratch pad RAM	256 KB
HPS DDR memory	DDR4 and DDR3 (Up to 64 bit with ECC)
DMA controller	8 channels
EMAC	3X 10/100/1000 Ethernet media access controller (EMAC) with integrated DMA
USB On-The-Go (OTG) controller	2X USB OTG with integrated DMA
UART controller	2X UART 16550 compatible
Serial peripheral interface (SPI) controller	4X SPI
I²C controller	5X I²C
Quad SPI flash controller	1X SIO, DIO, QIO SPI flash supported
SD/SDIO/MMC controller	1X eMMC 4.5 with DMA and CE-ATA support
NAND flash controller	• 1X ONFI 1.0 or later • 8 and 16 bit support
General-purpose timers	4X
Software-programmable general-purpose I/Os (GPIOs)	Maximum 48 GPIOs
HPS DDR Shared I/Os	3X 48 - May be assigned to HPS for HPS DDR access
Direct I/Os	48 I/Os to connect HPS peripherals directly to I/O
Watchdog timers	4X
Security	Secure device manager, Advanced Encryption Standard (AES) AES-256/SHA-256 bitstream encryption/authentication, PUF, ECDSA 256/384 boot code authentication, side-channel attack protection

Notes:
1. With overdrive feature.

3. Floating-point performance is IEEE-754 compliant single-precision.
4. Quad-core Arm Cortex-A53 hard processor system not available in Intel Stratix 10 MX devices.
5. A subset of pins for each package are used for high-voltage 3.0 V and 2.5 V interfaces.
6. All data is preliminary and subject to change without prior notice.

656,32,312,0,96 Numbers indicate total GPIO count, high-voltage I/O count, LVDS pairs, E-Tile transceiver count and H-Tile transceiver count.

Indicates pin migration path.

F2597 pin (52.5 mm x 52.5 mm, 1.0 mm pitch)		–	612,0,306,60,24	–
F2912 pin (55 mm x 55 mm, 1.0 mm pitch)		–	–	816,0,408,76,8

Notes:
1. LE counts valid in comparing across Intel FPGAs, and are conservative vs. competing FPGAs.
2. Fixed-point performance assumes the use of pre-adder.
3. Floating-point performance is IEEE-754 compliant single-precision.
4. Quad-core Arm Cortex-A53 hard processor system present in select Intel Stratix 10 DX devices.
5. All data is preliminary and subject to change without prior notice.

816,0,408,76,8 Numbers indicate total GPIO count, high-voltage I/O count, LVDS pairs, P-Tile transceiver count, E-Tile transceiver count.

PRODUCT LINE	HARD PROCESSOR SYSTEM (HPS)
Processor	Quad-core 64 bit Arm Cortex-A53 MPCore processor
Maximum processor frequency	1.5 GHz[1]
Processor cache and co-processors	• L1 instruction cache (32 KB) • L1 data cache (32 KB) with error correction code (ECC) • Level 2 cache (1 MB) with ECC • Floating-point unit (FPU) single and double precision • Arm NEON media engine • Arm CoreSight debug and trace technology • System Memory Management Unit (SMMU) • Cache Coherency Unit (CCU)
Scratch pad RAM	256 KB
HPS DDR memory	DDR4, DDR3 (Up to 64 bit with ECC)
DMA controller	8 channels
EMAC	3X 10/100/1000 Ethernet media access controller (EMAC) with integrated DMA
USB On-The-Go (OTG) controller	2X USB OTG with integrated DMA
UART controller	2X UART 16550 compatible
Serial peripheral interface (SPI) controller	4X SPI
I^2C controller	5X I^2C
Quad SPI flash controller	1X SIO, DIO, QIO SPI flash supported
SD/SDIO/MMC controller	1X eMMC 4.5 with DMA and CE-ATA support
NAND flash controller	• 1X ONFI 1.0 or later • 8 and 16 bit support
General-purpose timers	4X
Software-programmable general-purpose I/Os (GPIOs)	Maximum 48 GPIOs
HPS DDR Shared I/Os	3X 48 - May be assigned to HPS for HPS DDR access
Direct I/Os	48 I/Os to connect HPS peripherals directly to I/O
Watchdog timers	4X
Security	Secure device manager, Advanced Encryption Standard (AES) AES-256/SHA-256 bitstream encryption/authentication, PUF, ECDSA 256/384 boot code authentication, side-channel attack protection

Notes:
1. With overdrive feature.

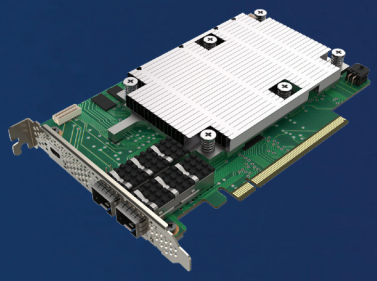
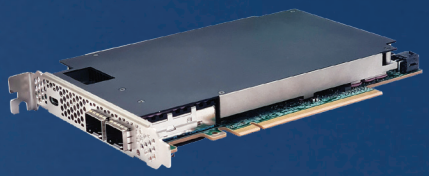
Accelerator Cards That Fit Your Performance Needs

Intel® FPGA-based acceleration solutions make it possible to move, process, and store data faster and more efficiently. Intel and partner Programmable Acceleration Cards (PACs), Infrastructure Processing Units (IPUs), and SmartNICs offer hardware programmability on production-qualified cards, which enable the quick design and deployment of workloads in networking, wireless, cloud, and data center applications.

Silicom FPGA SmartNIC N5010



Inventec FPGA IPU C5020X



Silicom FPGA IPU C5010X

Intel Arria 10 FPGA and SoC Overview

www.intel.com/arria10

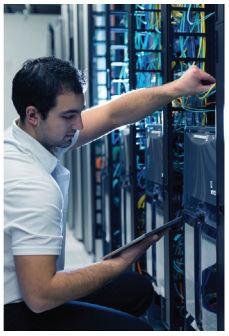
Intel Arria 10 FPGAs and SoCs deliver the highest performance at 20 nm, offering a one speed-grade performance advantage over competing devices. Intel Arria 10 FPGAs and SoCs are up to 40% lower power than previous generation FPGAs and SoCs, and feature the industry's only hard floating-point DSP blocks with speeds up to 1,500 giga floating-point operations per second (GFLOPS)†. The Intel Arria 10 FPGAs and SoCs are ideal for the following end market applications.

Wireless

Applications

- Remote radio head
- Mobile backhaul
- Active antenna
- Base station
- 4G/Long Term Evolution (LTE) macro eNB
- Wideband Code Division Multiple Access (W-CDMA)

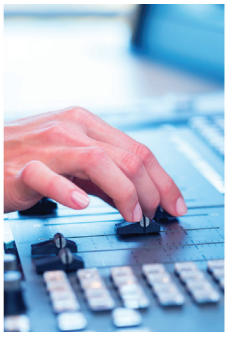
Cloud Service and Storage

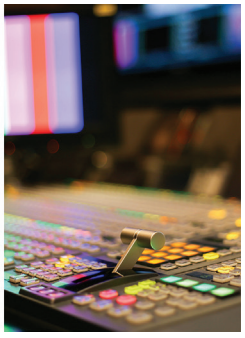


Applications

- Flash cache
- Cloud
- Server
- Financial
- Bioscience
- Oil and gas
- Data center server acceleration

Broadcast





Applications

- Switcher
- Server
- Encoder/decoder
- Capture cards
- Editing
- Monitors
- Multiviewers

Notes:
1. Fixed-point performance assumes the use of pre-adders.
2. All packages are ball grid arrays with 1.0 mm pitch, except for U19 (U484), which is 0.8 mm pitch.
3. A subset of pins for each package are used for 3.3 V and 2.5 V interfaces.
4. Each LVDS pair can be configured as either a differential input or a differential output.
5. Certain packages might not bond out all PCI Express hard IP blocks.
6. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.

192, 48, 72, 6 — Numbers indicate GPIO count, high-voltage I/O count, LVDS pairs, and transceiver count.

Indicates pin migration.

Notes:
1. Fixed-point performance assumes the use of pre-adders.
2. All packages are ball grid arrays with 1.0 mm pitch, except for U19 (U484), which is 0.8 mm pitch.
3. A subset of pins for each package are used for 3.3 V and 2.5 V interfaces.
4. Each LVDS pair can be configured as either a differential input or a differential output.
5. Certain packages might not bond out all PCI Express hard IP blocks.
6. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.

192, 48, 72, 6 Numbers indicate GPIO count, high-voltage I/O count, LVDS pairs, and transceiver count.

Indicates pin migration.

PRODUCT LINE	HARD PROCESSOR SYSTEM (HPS)
Processor	Dual-core Arm Cortex-A9 MPCore processor
Maximum processor frequency	1.2 -1.5 GHz[1]
Processor cache and co-processors	• L1 instruction cache (32 KB) • L1 data cache (32 KB) • Level 2 cache (512 KB) shared • FPU single and double precision • Arm Neon media engine • Arm CoreSight debug and trace technology • Snoop control unit (SCU) • Acceleration coherency port (ACP)
Scratch pad RAM	256 KB
HPS DDR memory	DDR4 and DDR3 (Up to 64 bit with ECC)
DMA controller	8 channels
EMAC	3X 10/100/1000 EMAC with integrated DMA
USB OTG controller	2X USB OTG with integrated DMA
UART controller	2X UART 16550 compatible
SPI controller	4X SPI
I^2C controller	5X I^2C
Quad SPI flash controller	1X SIO, DIO, QIO SPI flash supported
SD/SDIO/MMC controller	1X eMMC 4.5 with DMA and CE-ATA support
NAND flash controller	• 1X ONFI 1.0 or later • 8 and 16 bit support
General-purpose timers	7X
Software-programmable GPIOs	Maximum 54 GPIOs
Direct shared I/Os	48 I/Os to connect HPS peripherals directly to I/O
Watchdog timers	4X
Security	Secure boot, AES, and secure hash algorithm

Notes:
1. With overdrive feature.

Intel FPGA Product Catalog

Intel Cyclone 10 FPGA Overview

www.intel.com/cyclone10

Intel Cyclone 10 FPGAs deliver cost and power savings over previous generations of Intel Cyclone FPGAs. Intel Cyclone 10 GX FPGAs provide high bandwidth via 12.5G transceiver-based functions, 1.4 Gbps LVDS, and 1,866 Mbps DDR3 SDRAM, and feature a hard floating-point DSP block in a low-cost FPGA. Intel Cyclone 10 LP devices offer low static power, cost-optimized functions.

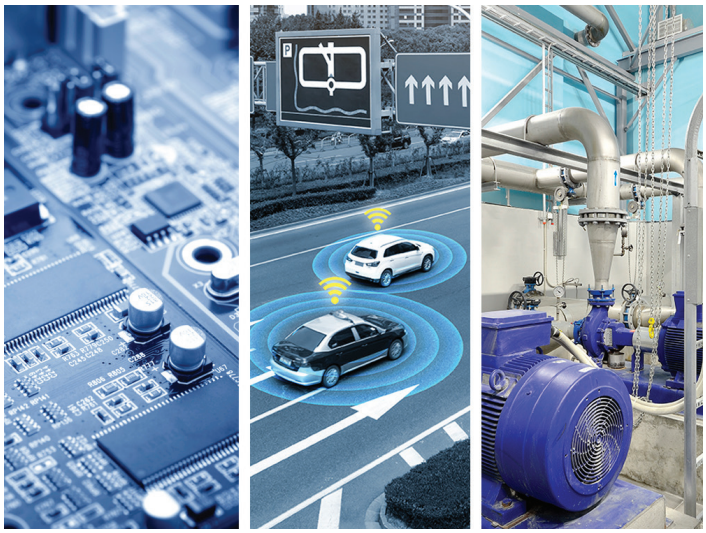
- Intel Cyclone 10 GX FPGAs are optimized for high bandwidth‡
- Intel Cyclone 10 LP FPGAs are optimized for power and cost-sensitive applications

Intel Cyclone 10 GX FPGA

- Low-cost 12.5 Gbps transceivers
- 1,866 Mbps 72 bit DDR3 SDRAM interface
- 1.4 Gbps LVDS
- The industry's first low-cost FPGA with hard floating-point blocks

GX Applications

- Embedded vision cameras
- Industrial robotics
- Machine vision
- Programmable logic controllers
- Pro-AV systems



Intel Cyclone 10 LP FPGA

- Designed for power-sensitive applications
- Simplified core power supply requirements
- High I/O count to package density ratio
- Embedded Nios II soft processor support

LP Applications

- I/O expansion
- Interfacing
- Chip-to-chip bridging
- Sensor fusion
- Industrial motor control

‡ Compared to previous generation Cyclone FPGAs, cost comparisons are based on list price. Tests measure performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. Consult other sources of information to evaluate performance as you consider your purchase. For more complete information about performance and benchmark results, visit www.intel.com/benchmarks.

3. All data is correct at the time of printing and may be subject to change without prior notice. For the latest information, please visit **www.intel.com/fpga**.

71, 22 Numbers indicate GPIO count, LVDS pairs.

Indicates pin migration path.

Intel FPGA Product Catalog

Intel MAX 10 FPGA Overview

www.intel.com/max10

Intel MAX 10 FPGAs revolutionize non-volatile integration by delivering advanced processing capabilities in a low-cost, instant-on, small form factor, programmable logic device.

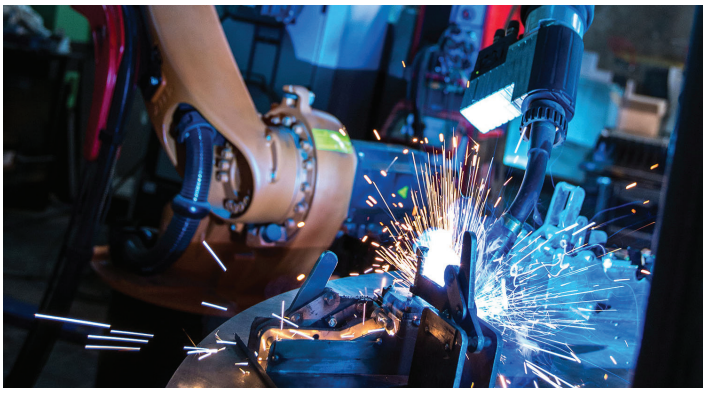
Intel MAX 10 FPGAs are built on TSMC's 55 nm flash technology, enabling instant-on configuration so you can quickly control the power-up or initialization of other components in the system. The devices also include full-featured FPGA capabilities, such as DSP, analog functionality, Nios II Gen2 embedded soft processor support, and memory controllers.

With a robust set of FPGA capabilities, Intel MAX 10 FPGAs are optimized for a wide range of high-volume, cost-sensitive applications, including:

Automotive

- Built on TSMC's 55 nm high-volume flash process tailored for the automotive industry's rigorous safety and quality requirements
- Integrated flash provides instant-on behavior for applications requiring fast boot times such as rear-view cameras in advanced driver assistance systems (ADAS) and infotainment displays
- FPGA-class signal processing acceleration for electric vehicle (EV) applications, such as motor control, battery management, and power conversion

Industrial



- Reduced footprint, increased design security and reliability, and lower system cost
- Accurate environmental condition sensing and efficient real-time controls for motor control, I/O modules, and Internet of Things (IoT) applications
- Single-chip support for multiple industrial Ethernet protocols and machine-to-machine (M2M) communication

Communications

- Analog functionality for sensing board environment allows integration of power-up sequencing and system-monitoring circuitry in a single device
- High I/O count and software-based system management using the Nios II soft processor enable board management integration in an advanced, reliable, single-chip system controller

Notes:
1. Additional user flash may be available, depending on configuration options.
2. The number of PLLs available is dependent on the package option.
3. Availability of the ADC or TSD varies by package type. Smaller pin-count packages do not have access to the ADC hard IP.
4. SRAM only.
5. SRAM, DDR3 SDRAM, DDR2 SDRAM, or LPDDR2.
6. "D" = Dual power supply (1.2 V/2.5 V), "S" = Single power supply (3.3 V or 3.0 V).
7. V81 package does not support analog feature set. 10M08 V81 F devices support dual image with RSU.
8. "Easy PCB" utilizes 0.8 mm PCB design rules.
9. Some LVDS channels at bottom bank can be configured as TX or RX, refer to the Intel MAX 10 High-Speed LVDS I/O User Guide for details.
10. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.

C, 27, 3/7 — Indicates feature set options, GPIO count, and LVDS transmitter or receiver count. Feature set options: C = Compact (single image), F = Flash (dual image with RSU), A = Analog (analog features block). Each has added premiums.

Indicates pin migration.

Intel eASIC Devices Overview

www.intel.com/easic

Intel eASIC devices are structured ASICs, an intermediary technology between FPGAs and standard-cell ASICs, that provide lower unit cost and lower power compared to FPGAs. These devices provide faster time to market and lower non-recurring engineering cost compared to standard-cell ASICs. The new Intel eASIC N5X devices, previously codenamed Diamond Mesa, include a hard processor system and secure device managers that are compatible with Intel FPGAs to extend Intel's logic portfolio offerings.

Intel eASIC N5X Devices

- 16 nm process
- Up to 80M equivalent ASIC gates
- 250 Mb of true dual port memory
- 32.44 Gbps high-speed transceivers
- Quad-core Arm Cortex-A53 hard processor system

Intel eASIC N3XS Devices

- 28 nm process
- Up to 52 million equivalent ASIC gates
- 124 Mb of true dual port memory
- 28 Gbps high-speed transceivers

Intel eASIC N3X Devices

- 28 nm
- Up to 5 million equivalent logic gates
- Up to 15.049 Kb of true dual port memory
- Up to 18 12.5 Gbps high-speed transceivers

Notes:
1. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.
2. 3.3 V compliant, requires a 3.0 V power supply.
3. Hybrid package (flip chip) FBGA: 33 x 33 (mm) 1.0-mm pitch.
4. Hybrid package (flip chip) FBGA: 45 x 45 (mm) 1.0-mm pitch.
5. 360, 90, 12 Numbers indicate GPIO count, LVDS count, and transceiver count.
6. Pin migration (same V_{cc}, GND, ISP, and input pins). User I/O pins may be less than labeled for pin migration.
7. Stratix series devices are offered for commercial and industrial temperatures and RoHS-compliant packages. Stratix IV GT devices are only offered for industrial temperatures (0 ˚C to 100 ˚C).

Notes:
1. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.
2. 1.15 V operation.
3. The PLL count includes general-purpose fractional PLLs and transceiver fractional PLLs.
4. For Arria V GZ devices, the I/O voltage of 3.3 V compliant, requires a 3.0 V power supply.
5. One pair of 10 Gbps transceiver channels can be configured as three 6 Gbps transceiver channels.
6. With 16 and 32 bit ECC support.
7. These memory interfaces are not available as Intel FPGA IP.
8. This memory interface is only available for Arria V GZ devices.

336 / 9,0 — For Arria V GX and GT devices, values on top indicate available user I/O pins and values at the bottom indicate the 6.5536 Gbps and 10.3125 Gbps transceiver count. One pair of 10 Gbps transceiver channels can be configured as three 6 Gbps transceiver channels. For Arria V GZ devices, values on top indicate available user I/O pins and values at the bottom indicate the 12.5 Gbps transceiver count.

250, 208 / 12+0 — Values on top indicate available FPGA user I/O pins and HPS I/O pins; values at the bottom indicate the 6.5536 Gbps plus 10.3125 Gbps transceiver count.

Pin migration (same V_{cc}, GND, ISP, and input pins). User I/O pins may be less than labeled for pin migration.

Pin migration is only possible if you use up to 320 I/O pins, up to nine 6.5536 Gbps transceiver count (for Arria V GX devices), and up to four 10.3125 Gbps transceiver count (for Arria V GT devices).

F896 pin (31 mm, 1.0 mm pitch)				480 –	480 –				480 9	480 12			480 9	480 12
F1152 pin (35 mm, 1.0 mm pitch)										560 12				560 12

Notes:
1. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.
2. The PLL count includes general-purpose fractional PLLs and transceiver fractional PLLs.
3. Automotive grade Cyclone V GT FPGAs include a 5 Gbps transceiver.
4. Transceiver counts shown are for ≤ 5 Gbps. The 6 Gbps channel count support depends on package and channel usage. Refer to Cyclone V Device Handbook Volume 2: Transceivers for guidelines.
5. Only one PCIe hard IP block supported in M301, M484, and U324 packages.
6. Includes 16 and 32 bit error correction code ECC support.

129
4 Values on top indicate available user I/O pins; values at the bottom indicate the 3.125 Gbps, 5 Gbps, or 6.144 Gbps transceiver count.

Pin migration (same V_{cc}, GND, ISP, and input pins). User I/O pins may be less than labeled for pin migration.

For FPGAs: Pin migration is only possible if you use only up to 175 GPIOs.

Notes:
1. All data is correct at the time of printing, and may be subject to change without prior notice. For the latest information, please visit www.intel.com/fpga.
2. Typical equivalent macrocells.
3. Unused LEs can be converted to memory. The total number of available LE RAM bits depends on the memory mode, depth, and width configurations of the instantiated memory.
4. An external resistor must be used for 5.0 V tolerance.
5. For temperature grades of specific packages (commercial, industrial, or extended temperatures), refer to Intel's online selector guide.
6. Thin quad flat pack (TQFP).

54 Number indicates available user I/O pins.

Pin migration (same Vcc, GND, ISP, and input pins). User I/Os may be less than labeled for pin migration.

Configuration Devices

View device ordering codes on page 57.

www.intel.com/fpgaconfiguration

The following information is an overview of our configuration devices. To determine the right configuration device for your FPGA, refer to the device datasheets and pinout files available on the Documentation: Configuration Devices page.

Intel FPGA serial configuration devices store the configuration file for our SRAM-based FPGAs. We designed our serial configuration devices to minimize board space while providing a dedicated FPGA configuration solution. Serial configuration devices are recommended for new designs. For information on additional configuration devices supporting older products, refer to the device datasheets and pinout files, available on the Documentation: Configuration Devices page.

EPCQ-A SERIAL CONFIGURATION DEVICES FOR 28 NM AND PRIOR FPGAs (3.0–3.3 V)

	SOIC	
	8 pin 4.9 x 6.0 (mm)	16 pin 10.3 x 10.3 (mm)
EPCQ4A	4	
EPCQ16A	16	
EPCQ32A	32	
EPCQ64A		64
EPCQ128A		128

Notes:

512 Number indicates memory size in megabits (Mb).

Vertical migration (same V_{cc}, GND, ISP, and input pins).

Transceiver Technology

www.intel.com/transceiverprotocols

Intel FPGAs with integrated transceivers offer a range of data rates to suit all applications from 600 Mbps to 30 Gbps non-return-to-zero (NRZ) and up to 58 Gbps PAM4 Gbps.

For a list of supported transceiver protocols, visit **www.intel.com/transceiverprotocols**.

To learn more about Intel transceivers, visit the Transceivers page.

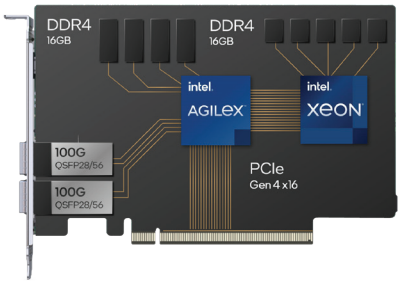
Intel FPGA Acceleration Card Solutions

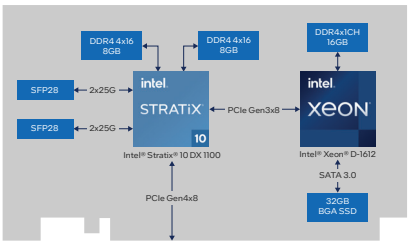
Accelerate your data center, cloud, and network infrastructure with a portfolio of Intel and partner infrastructure processing units (IPUs), SmartNICS, and PACs. These acceleration solutions are enabled by Intel's latest FPGA technology, designed, and qualified for large volume deployments. Existing Intel® PAC platforms such as the Intel FPGA PAC N3000 are supported by the Intel® Acceleration Stack for Intel® Xeon® CPU with FPGAs. New Intel, third-party, or proprietary cards such as the Silicom FPGA SmartNIC N5010 Series or Intel FPGA SmartNIC N6000-PL Platform are supported by next-generation platform software—the Intel® Open FPGA Stack (Intel® OFS). Intel's wide portfolio of platforms, cards, and software solutions enables your workloads to be efficiently developed, scaled, and deployed.

Intel® FPGA SmartNIC and IPU Platforms

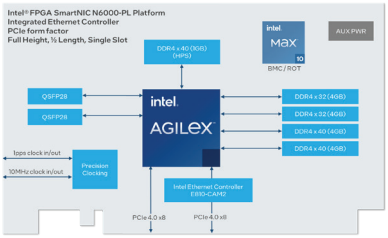
Intel is licensing FPGA SmartNIC and IPU platform designs to ODM partners. Acceleration Development Platforms (ADPs) are available through Intel and production-ready solutions are available through partners.



Intel® FPGA IPU C6000X-PL Platform is an Intel® Agilex™ FPGA-based platform for high-performance cloud acceleration. It offers 2x100 GbE network interfaces and accelerates cloud infrastructure workloads such as Open vSwitch (OvS), Non-Volatile Memory Express over Fabrics (NVMe-oF), and Remote Direct Memory Access (RDMA) over Converged Ethernet v2. Leverage FPGA programmability through Intel OFS with Infrastructure Programmer Development Kit (IPDK), Data Plane Development Kit (DPDK), or Storage Performance Development Kit (SPDK).



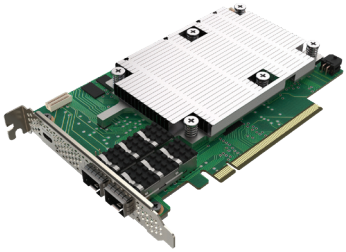
Intel® FPGA IPU C5000X-PL Platform is an Intel Stratix 10 FPGA and Intel Xeon processor-based cloud infrastructure acceleration platform with 2x25GbE network interfaces. Production-ready solutions are available through Silicom and Inventec.



Intel® FPGA SmartNIC N6000-PL Platform is an Intel Agilex FPGA and Intel® Ethernet Controller E810-based SmartNIC platform with 2x100GbE network interfaces. Production-ready solutions are available through Silicom and Winston NeWeb Corporation (WNC).

Partner FPGA SmartNIC and IPU Products

Silicom FPGA SmartNIC N5010 is the first hardware programmable 4x100 GbE FPGA SmartNIC enabling next-generation IA-based servers to meet the performance needs of the 4/5G Core User Plane Function/ Access Gateway Function. Its re-programmability can support Virtual Broadband Network Gateway, Virtualized Evolved Packet Core, Internet Protocol Security, vFirewall, Segment Routing Version, and Vector Packet Processing workload capability.



Based on the Intel FPGA IPU C5000X-PL Platform

Silicom FPGA IPU C5010X and Inventec FPGA IPU C5020X adapters are Intel® Xeon® D processor, SoC + FPGA cards offering a hardware programmable data path with 50G connectivity. With these IPUs, cloud service providers can improve server core utilization by offloading vSwitch and storage using IA-optimized DPDK and SPDK.

Based on the Intel FPGA SmartNIC N6000-PL Platform

Intel® FPGA SmartNIC N6010/N6011 and WNC FPGA SmartNIC WSN6050 series are high-performance Intel Agilex FPGA-based SmartNICs. These platforms provide 2x100 GbE connectivity for acceleration of communication workloads such as 4G/5G Virtualized Radio Access Network (vRAN), Virtual Network Functions (VNFs), and Professional Media over Managed IP Networks.

Product descriptions and datasheets for partner SmartNIC and IPU Acceleration Platforms can be found in the Intel® Solution Marketplace or the Silicom, Inventec, and WNC websites, and are not located in this catalog.

Intel SmartNICs and Programmable Acceleration Cards

Intel is discontinuing these cards in 2022. For more information, please see the official Product Discontinuance Notification PDN 2211 or contact your local Intel sales representative for more information.

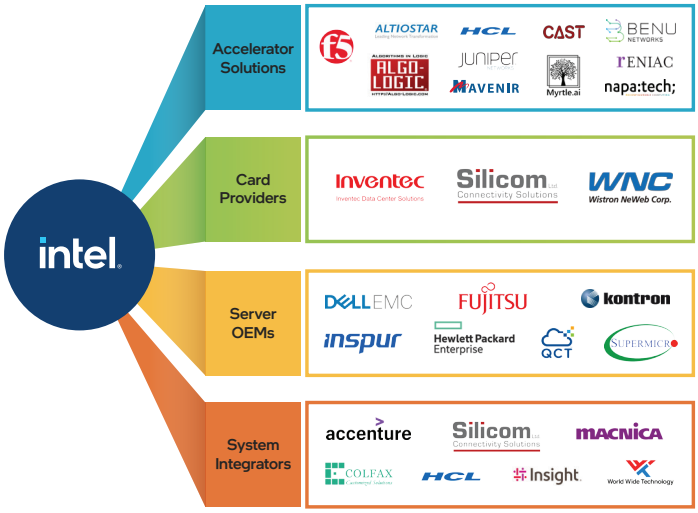
Intel® FPGA PAC N3000 accelerates network traffic for up to 100 Gbps to support low-latency, high-bandwidth 5G applications. This SmartNIC allows you to create custom-tailored solutions for core network workloads and vRAN to achieve faster time to market with the support of industry-standard orchestration and open source tools.

Intel® PAC with Intel® Arria® 10 GX FPGA provides FPGA acceleration in a low-power, low-profile form factor and inline acceleration for speeds of up to 40 Gbps. Its performance and versatility allow you to implement various solutions in data center and enterprise application acceleration.

Intel® FPGA PAC D5005 offers a high-density Intel Stratix 10 FPGA with a high-speed interface up to 100 Gbps for both look aside and inline acceleration of various data center and enterprise application – data analytics, AI, packet monitoring, and more.

Accelerated Workload Solutions with Intel Partners

Intel has engaged with leading providers of virtual appliances and accelerator functions best suited for FPGA acceleration. These partners build pre-designed accelerator functions that integrate seamlessly into common libraries, software frameworks, and your custom software application to minimize development investment and accelerate time to market. Our partners specialize in applications from 5G, network functions virtualization (NFV), data center, and more. All you need to do is select a card, identify a workload you want to accelerate, and let our partners take the effort out of your design. As a result, you get complete solutions and design services to minimize your development investment and accelerate your time to market.



Partners listed in the figure are examples and not all partners are represented.

Platform Software

Intel® OFS is the latest platform software enabling the customization and acceleration of Intel, third-party, or proprietary cards and platforms. Intel OFS is a scalable, source-accessible hardware and software infrastructure delivered via git repositories currently being used by Intel and select third-party platforms featuring our Intel Stratix 10 FPGA, Intel Agilex FPGA, and future Intel FPGA families. Intel OFS provides an efficient path for custom FPGA-based platform development by providing the FPGA, networking, memory, standard interfaces, board management, libraries, and more. The provided reference shell and source code can be modified to develop a unique acceleration platform or leveraged as-is for expedited development.

Why Choose Intel FPGAs for Acceleration Applications?

Ease of Deployment

Find validated and qualified Intel® FPGA Programmable Acceleration Cards (Intel® FPGA PACs) through several leading original equipment manufacturers (OEMs).

Standardization

Help eliminate complexity and enable application portability by leveraging the standard hardware and software interfaces provided by the Intel platform or card software.

Wide-range of Solutions

Discover what FPGAs can do for your business with the broad portfolio of acceleration solutions from technology experts.

Customization

Create customer platform or card solutions using source-accessible Intel® OFS hardware and software code.

Faster Time to Deployment

Experience faster time to deployment with native support for Intel OFS by leading open-source software distribution vendors.

Portability

Achieve greater design portability through industry-standard interface support and reusable OFS Standard APIs.

Intel Open FPGA Stack

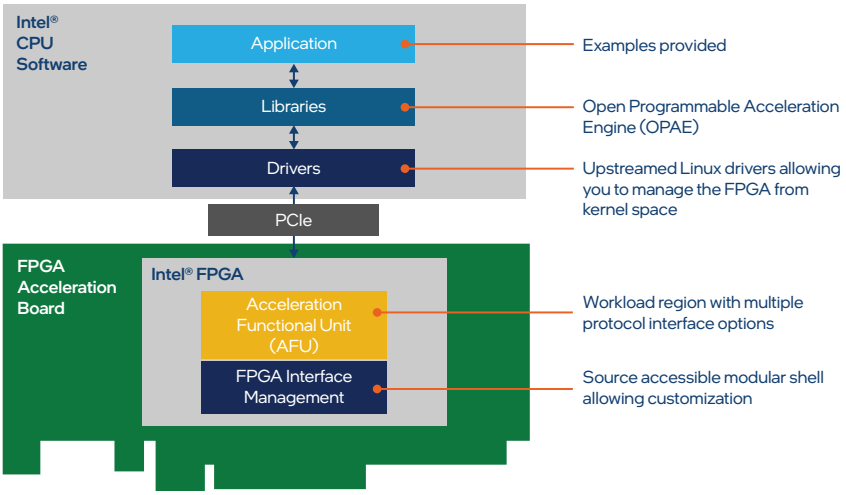
Intel Open FPGA Stack (Intel OFS) is a scalable, source-accessible hardware and software infrastructure delivered through git repositories that enables you to customize your own unique acceleration platform or card solutions. Intel OFS provides open access to a source-accessible infrastructure, developed using an open-source methodology, with standard interfaces and APIs. Intel OFS code is developed and validated using the Intel FPGA PAC D5005 and the Intel N6000 Acceleration Development Platform (ADP) as hardware reference platforms for the Intel Stratix 10 and Intel Agilex FPGA. Users are encouraged to leverage these reference platforms for initial code bring-up before modifying and porting to custom hardware.

Intel OFS provides multiple benefits to hardware, software, and application design engineers:

INTEL® OFS FEATURE	BOARD DEVELOPER	SOFTWARE DEVELOPER	APPLICATION DEVELOPER
Inherit an ecosystem of Intel® Open FPGA Stack-based boards, workloads, and OS distributors	✓	✓	✓
Accelerate software development by leveraging software drivers upstreamed to the Linux kernel and Open Programmable Acceleration Engine (OPAE) software and libraries		✓	✓
Accelerate workload development with industry-standard Arm AMBA AXI and Avalon compliant bus interfaces, workload examples, and simulation	✓		✓
Accelerate your verification and validation with automated build scripts, a United Verification Methodology (UVM) environment, and a suite of unit test cases	✓		
Customize your FPGA design (FIM) with modular and composable source code	✓		

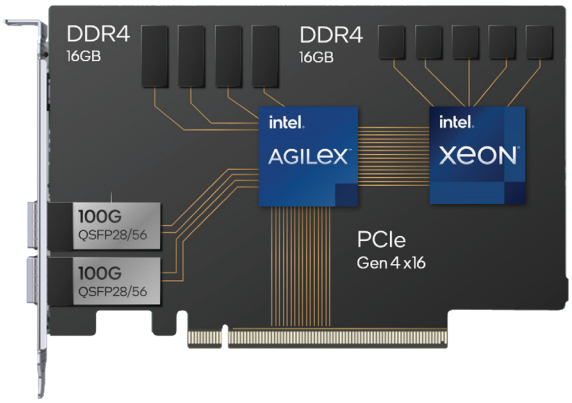
Get Started Today with Intel OFS

Contact your local Intel sales representative or complete our questionnaire on www.intel.com/ofs to request access to the Intel OFS source code and documentation on GitHub. For more information on the hardware and software architecture, check out the Intel OFS Product Brief.



Intel FPGA IPU C6000X-PL

The Intel FPGA IPU C6000X-PL is a high-performance Intel Agilex FPGA-based IPU platform providing networking and storage acceleration for cloud and communication service providers. The C6000X-PL offers 2x100GbE network interface and accelerates cloud workloads such as Open vSwitch, NVMe over Fabrics, and RDMA over Converged Ethernet, and has hardware crypto blocks to enhance security. It offers FPGA re-programmability through IPDK, DPDK, SPDK, and Intel OFS.



Targeted Workloads

- Open vSwitch (OvS)
- NVMe-oF
- RDMA over Converged Ethernet v2 (RoCEv2)
- Packet processing
- Cryptographic acceleration
- Security

Hardware

Intel Agilex F-Series FPGA
- 2,300K logic elements
- 222 Mb on-chip memory
- 3,200 DSP blocks

Onboard memory
- 16 GB DDR4 (to FPGA and processor)

Interfaces
- PCIe 4.0 x16
- 8 core Intel Xeon D processor
- 2X QSFP with up to 2x100 GbE configuration

Form factor
- ¾ length, full height; single slot

Board management
- Intel Cyclone 10 LP FPGA Board Management Controller (BMC)
  - Temperature and voltage readout Platform Level Data Model (PLDM)
- Full security implementation using Intel MAX 10 FPGA as RoT
- Remote update capabilities for FPGA flash memory and BMC

Power management
- Intelligent system power management with real-time telemetry and health monitoring

Software

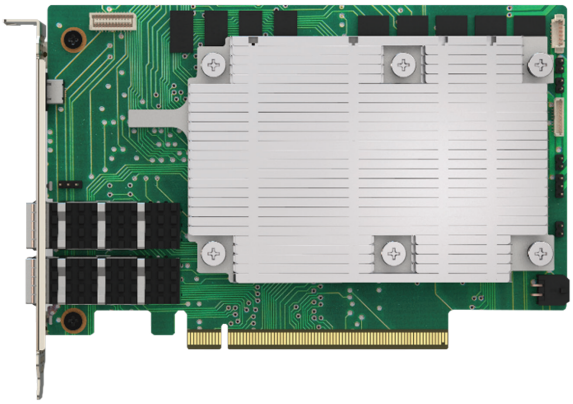
- IPDK
- DPDK
- SPDK
- OPAE
- Intel OFS
- FPGA Interface Manager

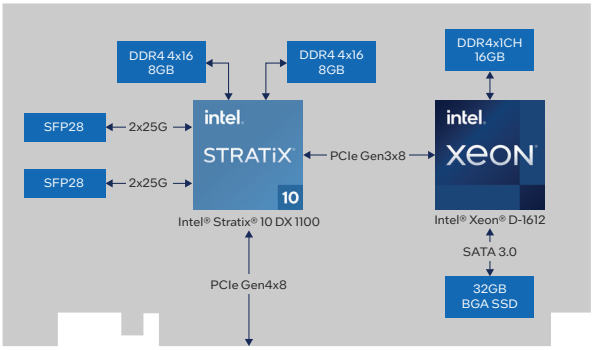
Ordering Information

Contact an Intel sales representative for ordering information.

Intel FPGA IPU C5000X-PL

The Intel FPGA IPU C5000X-PL Platform is a high-performance, Intel Xeon D processor and Intel Stratix 10 FPGA-based, cloud infrastructure accelerator. It supports up to 50G network connectivity and accelerates cloud and telco cloud infrastructure workloads such as Open vSwitch, NVMe over Fabrics, and RDMA over Converged Ethernet v2. Cloud service providers can take advantage of a large software ecosystem including software tools such as Virtio-net and DPDK or SPDK. Workloads can be optimized in bare metal, virtualized cloud, and bare metal virtualization deployments. The development platform is available from Intel, and production ready partner solutions are available from Silicom and Inventec.





Targeted Workloads

- Open vSwitch
- NVMe-oF
- RDMA over Converged Ethernet v2 (RoCEv2)
- Security

Hardware

Intel Stratix 10 DX FPGA
- 1,325K logic elements
- 114 Mb on-chip memory
- 5,184 DSP blocks

Onboard memory
- 20 GB DDR4
- 1.25 Gb flash

Interfaces
- PCIe 3.0 x8 or 4.0 x8
- 4-8 core Intel Xeon D processor
- Up to 2x25 GbE configuration

Form factor/thermal/power
- ½ length, full height
- 75 W for key applications

Board management
- Full security implementation using BMC as RoT
- Remote update capabilities for FPGA flash memory and BMC

Power management
- Intelligent system power management with real-time telemetry and system health monitoring

Software

- DPDK/BBDev
- SPDK
- OPAE

Design Entry Tools

- Intel Quartus Prime Pro Edition Software

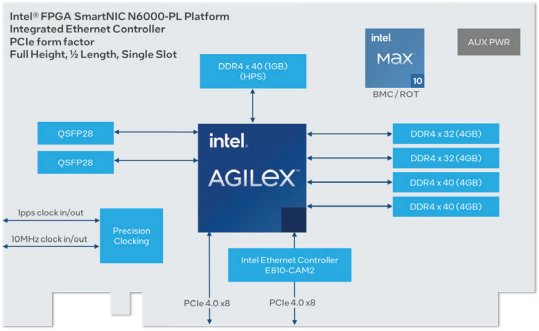
Intel FPGA SmartNIC N6000-PL Platform

The Intel FPGA SmartNIC N6000-PL Platform is the next-generation FPGA SmartNIC for network acceleration. This high-performance FPGA-based SmartNIC supports hardware programmable acceleration of communication workloads such as 4G/5G vRAN, Virtual Cell Site Router (vCSR), 5G User Plane Function (UPF), SMPTE ST2110 Professional Media over Managed IP Networks, and more. It boasts higher performance, TCO optimization, and scalability compared to previous generations of Intel vRAN and O-RAN Acceleration Cards, including the Intel FPGA PAC N3000. It incorporates an Intel Agilex F-Series FPGA, 2x 100GbE connectivity, a quad-core Arm Cortex-A53 processor, and compatibility with next generation platform software—the Intel OFS. This development platform is available from Intel, along with production ready partner solutions available from Silicom and WNC.



Targeted Workloads

- vRAN/Open RAN (O-RAN)
- 5G UPF
- vCSR
- SMPTE ST2110 Professional Media over Managed IP Networks

Hardware

Intel Agilex F-Series FPGA

- High-performance F-Series, multi-gigabit SERDES transceivers up to 58 Gbps
- 1,437K logic elements
- 190 Mb on-chip memory
- 4,510 DSP blocks

Onboard memory

- 16 GB DDR4 to FPGA
- 1 GB DDR4 to HPS

Interfaces

- PCIe 4.0 bifurcated x8/x8 (N6000)
- PCIe 4.0 x16 (N6001)
- Intel® Ethernet Controller E810
- 2X QSFP with up to 2x100 GbE support (2x1x100G, 2x2x50G, 2x4x25G, 2x4x10G)
- Supports SyncE, CPRI, eCPRI
- Front panel SMA for IEEE1588 1pps/10 MHz and master clocking
- O-RAN LLS-C1, -C2, -C3 support

Form factor/thermal/power

- FHHL, single slot; passively cooled
- N6000 < 100W, N6001 < 75W
- NEBS Class 1 compliance support

Board management

- Intel MAX 10 FPGA BMC
- Full security implementation using Intel MAX 10 FPGA as RoT
- Remote update capabilities for FPGA flash memory and BMC
- Full card BMC solution host communication via SMBus and PCIe VDM

Power management

- Intelligent system power management with real-time telemetry and system health monitoring

Software

- DPDK/BBDev
- FlexRAN
- OPAE
- Intel OFS

Design Entry Tools

- Intel Quartus Prime Pro Edition Software

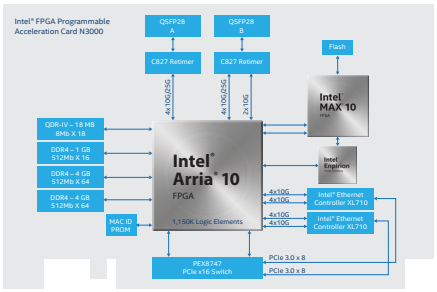
Intel FPGA Programmable Acceleration Card N3000

Note: Intel is discontinuing the Intel FPGA PAC N3000. Please read the Product Discontinuance Notification PDN2211 for more information or reach out to your local Intel Sales Representative with any questions.

Intel FPGA Programmable Acceleration Card (Intel FPGA PAC) N3000 is a highly customizable card, which enables high-throughput, lower latency, and high-bandwidth applications. It allows the optimization of data plane performance to achieve lower costs while maintaining a high degree of flexibility. End-to-end industry-standard and open-source tool support allow you to quickly adapt to evolving workloads and industry standards. Intel is accelerating 5G and NFV adoption for ecosystem partners, such as telecommunications equipment manufacturers (TEMs), virtual network functions (VNF) vendors, system integrators, and telecommunications companies to bring scalable and high-performance solutions to market. This product includes a variant that is designed to be Network Equipment Building System (NEBS)-friendly and features a Root-of-Trust device that helps protect systems from FPGA hosted security exploits.



Targeted Workloads

- Fronthaul Gateway (FHGW)
- Open Virtual Switch (OvS)
- Contrail, tungsten fabric
- Segment routing for IPv6 (SRv6) VPP
- vRAN
- Distributed Denial of Service (DDoS), Virtual Firewall (vFW),and Virtual Broadband Network Gateway (vBNG) for H-QoS, classification, policing, scheduling, and shaping
- vEPC, 4G/5G UPF
- IPSec

Hardware

Intel Arria 10 GT FPGA

- High-performance, multi-gigabit SERDES transceivers up to 25.78 Gbps
- 1,150K logic elements
- 65.7 Mb on-chip memory
- 3,036 DSP blocks

Onboard Memory

- 9 GB DDR4
- 144 Mb QDR-IV

Interfaces

- PCIe 3.0 x16
- Dual Intel Ethernet Converged Network Adapter (Intel Ethernet CNA) XL710
- 2X QSFP with 10 Gbps and 25 Gbps support (up to 100GbE configuration)

Form Factor

- 1/2 length, full height; single slot

Board Management

- Intel MAX 10 FPGA BMC
  - Temperature and voltage readout
  - PLDM
- Remote update capabilities for FPGA flash memory and BMC

Power Management

- Intel Enpirion Power Solutions: Intelligent system power management with real-time telemetry and system health monitoring.

Software

- DPDK
- OPAE
- Acceleration Stack for Intel Xeon CPU with FPGAs
- FPGA Interface Manager

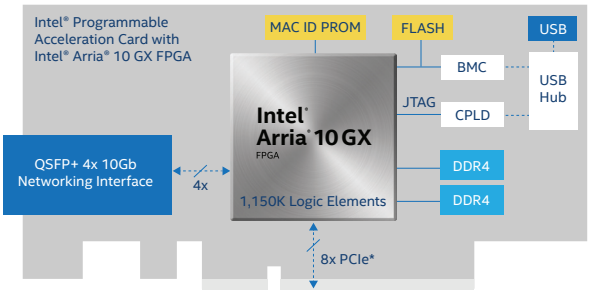
Design Entry Tools

- Intel Quartus Prime Pro Edition Software
- Intel FPGA SDK for OpenCL

Intel Programmable Acceleration Card with Intel Arria 10 GX FPGA

Note: Intel is discontinuing the Intel FPGA PAC N3000. Please read the Product Discontinuance Notification PDN2211 for more information or reach out to your local Intel Sales Representative with any questions.

This PCIe-based FPGA acceleration card for data centers offers both inline and lookaside acceleration. It provides the performance and versatility of FPGA acceleration and is one of several cards or platforms supported by the Acceleration Stack for Intel Xeon CPUs with FPGAs. This acceleration stack provides a common developer interface for both application and accelerator function developers, and includes drivers, APIs, and an FPGA interface manager. Together with acceleration libraries and development tools, the acceleration stack saves developer time and enables code re-use across multiple Intel FPGA cards or platforms. The card can be deployed in a variety of servers with its small form factor, low-power dissipation, and passive heat sink.



Targeted Workloads

- Big data analytics
- Artificial intelligence
- Image transcoding
- Financial technology (FinTech)
- Packet Monitoring & Cyber security
- High-performance computing (HPC), such as genomics and oil and gas

Hardware

Intel Arria 10 GX FPGA
- High-performance, multi-gigabit serializer/deserializer (SERDES) transceivers up to 15 Gbps
- 1,150K logic elements available
- 65.7 Mb of on-chip memory
- 3,036 DSP blocks

Onboard Memory
- 8 GB DDR4 memory (4 GB x 2 banks)
- 1 Gb (128 MB) flash

Interfaces
- 3.0 x8 3.0 electrical, x16 mechanical
- USB 2.0 interface for debug and programming of FPGA and flash memory
- 1X QSFP+ with 4X 10GbE or 40GbE support

Form Factor
- ½ length, standard height; single slot with half height option
- 66 W thermal design power (TDP)

Board Management
- Temperature and voltage readout
- Platform Level Data Model (PLDM)

Software

- Acceleration Stack for Intel Xeon CPU with FPGAs
- FPGA Interface Manager
- OPAE

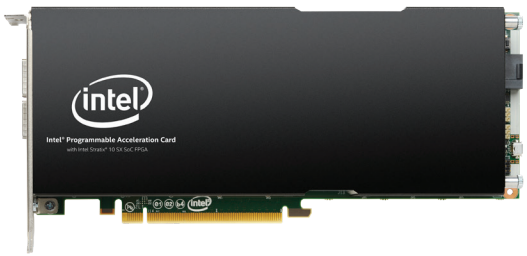
Design Entry Tools

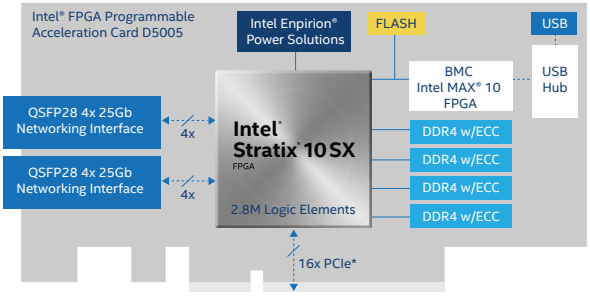
- Intel Quartus Prime Pro Edition Software
- Acceleration Stack for Intel Xeon CPU with FPGAs
- Intel FPGA SDK for OpenCL

Intel FPGA Programmable Acceleration Card D5005

Note: Intel is discontinuing the Intel FPGA PAC N3000. Please read the Product Discontinuance Notification PDN2211 for more information or reach out to your local Intel Sales Representative with any questions.

This high-performance FPGA acceleration card for data centers offers both inline and lookaside acceleration. Expanding upon the Intel PAC portfolio, it offers inline high-speed interfaces up to 100 Gbps. The Intel FPGA PAC D5005 additional processing capability makes it ideal for FinTech and streaming analytics applications. It provides the performance and versatility of FPGA acceleration and is one of several cards or platforms supported by the Acceleration Stack for intel Xeon CPU with FPGAs. This acceleration stack provides a common developer interface for both application and accelerator function developers, and includes drivers, APIs, and an FPGA interface manager. Together with acceleration libraries and development tools, the acceleration stack saves developer time and enables code re-use across multiple Intel FPGA cards or platforms.





Targeted Workloads

- FinTech
- Artificial intelligence
- Streaming analytics
- Video transcoding
- Genomics
- Packet Monitoring & Cyber security
- High-performance computing (HPC), such as genomics and oil and gas

Hardware

Intel Stratix 10 SX FPGA
- High-performance, multigigabit SERDES transceivers up to 26.3 Gbps
- 2,800K logic elements and 244 Mb on-chip memory
- 11,520 DSP blocks

Onboard Memory
- 32 GB DDR4 memory with error correction code
- 2 GB QSPI flash memory

Interfaces
- PCIe 3.0 x16
- USB 2.0 interface for debug and programming of FPGA and flash memory
- 2X QSFP+ with up to 100 Gbps support

Form Factor
- 3/4 length, full height; dual slot
- 215 W TDP

Board Management
- Intel MAX 10 FPGA BMC
  - Temperature and voltage readout
  - PLDM
  - Intelligent Platform Management Interface (IPMI 2.0)
- Remote Update capabilities for FPGA flash memory and BMC

Power Management
- Intel Enpirion Power Solutions: Intelligent system power management with real-time telemetry and system health monitoring.

Software

- Acceleration Stack for Intel Xeon CPU with FPGAs
- FPGA Interface Manager
- OPAE

Design Entry Tools

- Intel Quartus Prime Pro Edition Software
- Intel FPGA SDK for OpenCL

Accelerated Workload Solutions

Intel's broad ecosystem enables leading providers to offer a variety of accelerator functions best suited for FPGA acceleration. A number of these providers have complete solutions enabled for Intel FPGA-based PACs, IPUs, and SmartNICs, ranging from NFV, network security and monitoring, data analytics, AI, and more.

VNF and NFV Infrastructure Acceleration Workloads

- Open vSwitch (OvS)
- Contrail CN2 Contrail Classic
- Segment Routing Version (SRv6)
- Virtual Application Delivery Controller (vADC)
- Applications Access Gateway
- Network Slicing
- L4 Server Load Balancing Acceleration

Notes:
1. The only Arria II FPGA supported is the EP2AGX45 device.
2. The Intel Cyclone 10 GX device support is available for free in the Pro Edition software.
3. Available for Cyclone V and Stratix V devices only and requires a partial reconfiguration license.
4. For language support, refer to the **Verilog and SystemVerilog Synthesis Support** section of the Intel Quartus Prime Standard Edition User Guide.
5. Requires an additional license.
6. Integrated in the Intel Quartus Prime Software and available as a stand-alone tool. Only supports Intel Agilex and Intel Stratix 10 devices.

ADDITIONAL DEVELOPMENT TOOLS

TOOLS	DESCRIPTION
Intel FPGA SDK for OpenCL	• No additional licenses are required. • Supported with the Intel Quartus Prime Pro/Standard Edition Software. • The software installation file includes the Intel Quartus Prime Pro/Standard Edition Software and the OpenCL software.
Intel HLS Compiler	• No additional license required. • Now available as a separate download. • Supported with the Intel Quartus Prime Pro Edition Software.
DSP Builder for Intel FPGAs	• Additional licenses are required. • DSP Builder for Intel FPGAs (Advanced Blockset only) is supported with the Intel Quartus Prime Pro Edition Software for Intel Agilex, Intel Stratix 10, Intel Arria 10, and Intel Cyclone 10 GX devices.
Nios II Embedded Design Suite	• No additional licenses are required. • Supported with all editions of the Intel Quartus Prime Software. • Includes Nios II software development tools and libraries.
Intel SoC FPGA Embedded Development Suite (SoC EDS)	• Requires additional licenses for Arm* Development Studio for Intel® SoC FPGA (Arm* DS for Intel® SoC FPGA). • The SoC EDS Standard Edition is supported with the Intel Quartus Prime Lite/Standard Edition Software and the SoC EDS Pro Edition is supported with the Intel Quartus Prime Pro Edition Software.

INTEL QUARTUS PRIME DESIGN SOFTWARE FEATURES SUMMARY

Interface Planner	Enables you to quickly create your I/O design using real time legality checks.
Pin planner	Eases the process of assigning and managing pin assignments for high-density and high-pin-count designs.
Platform Designer	Accelerates system development by integrating IP functions and subsystems (collection of IP functions) using a hierarchical approach and a high-performance interconnect based on a network-on-a-chip architecture.
Off-the-shelf IP cores	Lets you construct your system-level design using IP cores from Intel and from Intel's third-party IP partners.
Synthesis	Provides expanded language support for System Verilog and VHDL 2008.
Scripting support	Supports command-line operation and Tcl scripting.
Incremental optimization	Offers a faster methodology to converge to design sign-off. The traditional fitter stage is divided into finer stages for more control over the design flow.
Partial reconfiguration	Creates a physical region on the FPGA that can be reconfigured to execute different functions. Synthesize, place, route, close timing, and generate configuration bitstreams for the functions implemented in the region.
Block-based design flows	Provides flexibility of reusing timing-closed modules or design blocks across projects and teams.
Intel Hyperflex FPGA Architecture	Provides increased core performance and power efficiency for Intel Stratix 10 devices.
Physical synthesis	Uses post placement and routing delay knowledge of a design to improve performance.
Design space explorer (DSE)	Increases performance by automatically iterating through combinations of Intel Quartus Prime Software settings to find optimal results.
Extensive cross-probing	Provides support for cross-probing between verification tools and design source files.
Optimization advisors	Provides design-specific advice to improve performance, resource usage, and power consumption.
Chip planner	Reduces verification time while maintaining timing closure by enabling small, post-placement and routing design changes to be implemented in minutes.
Timing Analyzer	Provides native Synopsys Design Constraint (SDC) support and allows you to create, manage, and analyze complex timing constraints and quickly perform advanced timing verification.
Signal Tap logic analyzer	Supports the most channels, fastest clock speeds, largest sample depths, and most advanced triggering capabilities available in an embedded logic analyzer.
System Console	Enables you to easily debug your FPGA in real time using read and write transactions. It also enables you to quickly create a GUI to help monitor and send data into your FPGA.
Power Analyzer	Enables you to analyze and optimize both dynamic and static power consumption accurately.
Design Assistant	A design rules checking tool that allows you to get to design closure faster by reducing the number of iterations needed and by enabling faster iterations with targeted guidance provided by the tool at various stages of compilation.
Fractal synthesis	Enables the Intel Quartus Prime Software to efficiently pack arithmetic operations in the FPGA's logic resources resulting in significantly improved performance.
EDA partners	Offers EDA software support for synthesis, functional and timing simulation, static timing analysis, board-level simulation, signal integrity analysis, and formal verification. To see a complete list of partners, visit www.intel.com/fpgaedapartners.

Getting Started Steps

Step 1: Download the free Intel Quartus Prime Lite Edition Software
www.intel.com/quartus

Step 2: Get oriented with the Intel Quartus Prime Software interactive tutorial.
After installation, open the interactive tutorial on the welcome screen.

Step 3: Sign up for training
www.intel.com/fpgatraining

Purchase the Intel Quartus Prime Software and increase your productivity today.

INTEL QUARTUS PRIME SOFTWARE
Intel Quartus Prime Software (Standard and Pro Edition) and Questa*-Intel® FPGA Edition software are bundled together into one single ordering part number effective October 15, 2021.
SW-ONE-QUARTUS Price: $3,645
The purchase can be applied for Fixed or Floating or Renewal licenses. Refer to the following product advisories for more information: • ADV 2127 Single Ordering Part Number for Intel Quartus Prime Software

QUESTA-INTEL FPGA EDITION SOFTWARE	QUESTA-INTEL FPGA STARTER EDITION SOFTWARE
SW-QUESTA-PLUS	SW-QUESTA
$1,995	Free
Questa-Intel FPGA Edition software is available for $1,995	Questa-Intel FPGA Starter Edition is available for free, but requires a license that can be generated at the Self-Service Licensing Center. It is 40% the performance of the Questa-Intel FPGA Edition software.
Refer to the following product advisories for more information: • ADV 2122 Replacement of ModelSim*-Intel® FPGA Edition Software	

DSP Builder for Intel FPGAs

www.intel.com/dspbuilder

The DSP Builder for Intel FPGAs is a DSP development tool that allows push-button HDL generation of DSP algorithms directly from the MathWorks Simulink environment. This tool adds additional libraries alongside existing Simulink libraries with the DSP Builder for Intel FPGAs (Advanced Blockset) and DSP Builder for Intel FPGAs (Standard Blockset). Intel recommends using the DSP Builder for Intel FPGAs (Advanced Blockset) for new designs. The DSP Builder for Intel FPGAs (Standard Blockset) is not recommended for new designs except as a wrapper for the DSP Builder for Intel FPGAs (Advanced Blockset).

DSP BUILDER FOR INTEL FPGAs FEATURES

The DSP Builder for Intel FPGAs (Advanced Blockset) offers the following features:

- Arithmetic logic unit (ALU) folding to build custom ALU processor architectures from a flat data-rate design
- High-level synthesis optimizations, auto-pipeline insertion and balancing, and targeted hardware mapping
- High-performance fixed- and floating-point DSP with vector processing
- Auto memory mapping
- Single system clock datapath
- Flexible 'white-box' fast Fourier transform (FFT) toolkit with an open hierarchy of libraries and blocks for users to build custom FFTs

Generate resource utilization tables for all designs without the Intel Quartus Prime Software compile.

Automatically generate projects or scripts for the Intel Quartus Prime Software, the Questa*-Intel FPGA software, Timing Analyzer, and Platform Designer.

FEATURES	DSP BUILDER FOR INTEL FPGAS (STANDARD BLOCKSET)	DSP BUILDER FOR INTEL FPGAS (ADVANCED BLOCKSET)
High-level optimization		✓
Auto pipeline insertion		✓
Floating-point blocks		✓
Resource sharing		✓
IP-level blocks	✓	✓
Low-level blocks	✓	✓
System integration	✓	✓
Hardware co-simulation	✓	✓

Purchase the DSP Builder for Intel FPGAs to meet high-performance DSP design needs today.

PRICING	OPERATING SYSTEM
$1,995 Primary $1,995 Renewal Subscription for one year	Windows/ Linux

Getting Started with the DSP Builder for Intel FPGAs

Step 1: Download the Intel Quartus Prime Pro or Standard Edition Software (www.intel.com/quartus):
- Pro Edition to target the latest Intel Agilex, Intel Stratix 10, Intel Arria 10, and Intel Cyclone 10 GX devices.
- Standard Edition to target Intel Arria 10, Intel Cyclone 10 LP, Intel MAX 10, Stratix V, and Cyclone V devices.

Step 2: Purchase additional DSP Builder for Intel FPGAs and MATLAB software licenses:
- DSP Builder for Intel FPGAs software license
- MATLAB software license

Step 3: Follow the following required order of installation:
a. Intel Quartus Prime Software
b. MathWorks MATLAB software
c. DSP Builder for Intel FPGAs

Step 4: To view the DSP Builder for Intel FPGAs version history and software requirements, visit the DSP Builder for Intel FPGAs Version History and Software Requirements web page.

Step 5 : To learn how to add your DSP Builder for Intel FPGAs license to your MATLAB installation, refer to the Installing and Licensing DSP Builder for Intel FPGAs web page.

Intel FPGA SDK for OpenCL

www.intel.com/opencl

Intel FPGA SDK for OpenCL[1] allows you to accelerate applications on FPGAs by abstracting away the complexities of FPGA design. Software programmers can write hardware-accelerated kernel functions in OpenCL that is an ANSI C-based language with additional OpenCL constructs to extract parallelism and program heterogeneous platforms. FPGAs are the accelerator of choice for heterogeneous systems, providing low latency, performance, and power efficiency versus GPUs and CPUs.

INTEL FPGA SDK FOR OPENCL SOFTWARE FEATURES SUMMARY	
Offline Compiler	• GCC-based model compiler of OpenCL kernel code
OpenCL Utility	• Diagnostics for board installation • Flash or program FPGA image • Install board drivers (typically PCI Express)
Intel Code Builder for OpenCL API	• Edit, build, and debug OpenCL kernels • Collect runtime performance • View generated reports
Operating System	• Microsoft Windows 10 • Red Hat Enterprise Linux 6 • Read Hat Enterprise Linux 7 • SUSE SLE 12 • Ubuntu 14.04 LTS • Ubuntu 16.04 LTS • Ubuntu 18.04 LTS
Memory Requirements	• Computer equipped with at least 32 GB RAM

OpenCL™ and the OpenCL logo are trademarks of Apple Inc. used by permission by Khronos.

Notes:
1. Product is based on a published Khronos Specification, and has passed the Khronos Conformance Testing Process. Current conformance status can be found at www.khronos.org/conformance.

Getting Started with the Intel FPGA SDK for OpenCL

Step 1: Download the Intel Quartus Prime Pro Edition Software to target the latest Intel Agilex, Intel Stratix 10, Intel Arria 10, and Intel Cyclone 10 devices.

Note: The software installation file includes the OpenCL software and Intel Quartus Prime Pro Edition Software. The Intel Quartus Prime Software requires a license purchase but no additional licenses are required for the Intel FPGA SDK for OpenCL.

Step 2: Download the Intel Board Support Package (BSP) that is needed to run your OpenCL application. You can also purchase a partner provided BSP, or create a custom BSP.

Step 3: For more information, read the Intel FPGA SDK for OpenCL Getting Started Guide.

Embedded Software and Tools for Intel SoC FPGA

www.intel.com/soceds

The Intel SoC FPGA Embedded Development Suite (SoC EDS) is a comprehensive tool suite for embedded software development on Intel SoC FPGAs. It comprises development tools, utility programs, and design examples to jump-start firmware and application software development. The SoC EDS is available in Standard and Pro Editions. The Standard Edition includes extensive support for 28 nm SoC FPGA families, whereas the Pro Edition is optimized to support the advanced features in the next-generation SoC FPGA families. In addition, the SoC EDS works in conjunction with the Arm Development Studio for Intel SoC FPGA (Arm DS for Intel SoC FPGA). This toolkit enables embedded developers to code, build, debug, and optimize in a single Eclipse-based IDE. The Arm DS for Intel SoC FPGA licenses are available in two options: a 30-day evaluation license and a paid Arm DS for Intel SoC FPGA license. The Arm DS for Intel SoC FPGA license is included at no cost with Intel SoC FPGA Development Kits.

More Information

For the latest on OS support for Intel SoCs, visit www.intel.com/socecosystem

Nios® V Processor

The Nios® V processor is the next-generation soft processor for Intel FPGAs based on the open-source industry standard RISC-V instruction set architecture (ISA). This processor is available in the Intel Quartus Prime Pro Edition Software starting with version 21.3. The first core in the Nios V processor series is the Nios V/m microcontroller. Additional cores in future releases will be the Nios V/g general-purpose processor, an application-class processor, and a Linux-capable processor. You can use the Nios V processor together with the Arm processor in Intel SoCs to create effective multi-processor systems.

With the Nios V processor you can:

- Lower overall system cost and complexity by integrating external processors into the FPGA.
- Target the Intel Agilex, Intel Stratix 10, Intel Arria 10, Intel Cyclone 10 devices, or the FPGA portion of the Intel Agilex, Intel Stratix 10, and Intel Arria 10 SoC. Support on Intel Quartus software standard devices coming soon.
- Leverage the community-maintained ecosystem to get your designs to market faster by choosing from the most up-to-date and modern toolchains, debuggers, and real-time operating system (RTOS) for your software development
- Take advantage of the free license for the Nios V/m microcontroller core to get started today

Hardware development

- Intel Quartus Prime Pro Edition Software
- Platform Designer
- Signal Tap logic analyzer
- System Console for low-level debugging of Platform Designer systems

Software development

- Initial development is supported using the open-source ecosystem starting with Intel Quartus Prime Pro Edition Software v21.3
- Unified debugger for homogeneous and heterogeneous debug capabilities

Licensing

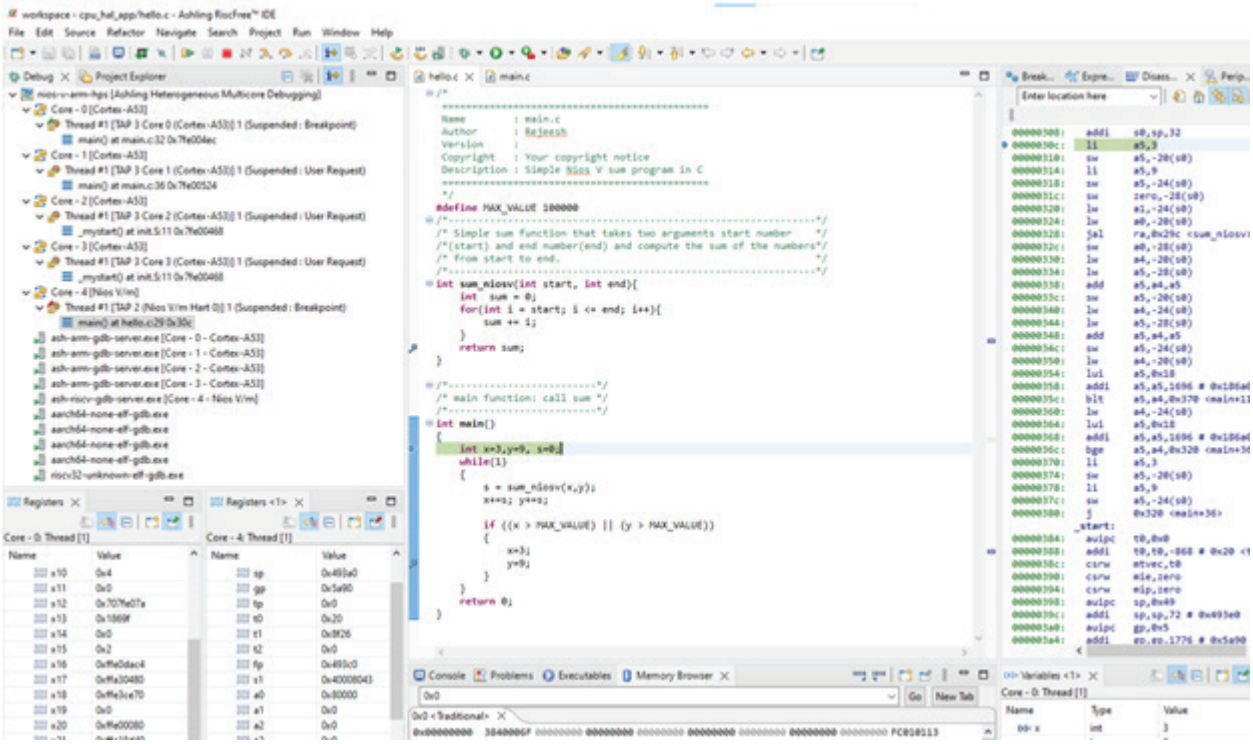
A license is required for Nios V processors. The Nios V/m embedded processor license is available at no cost in the Self-Service Licensing Center.

Getting started

To learn more about the Nios V processor, visit www.intel.com/content/www/us/en/products/details/fpga/nios-processor/v.html.

RiscFree* IDE for Intel® FPGAs

The RiscFree* IDE for Intel® FPGAs is developed by Ashling for Intel® FPGAs. This integrated development environment (IDE) provides software development and debug support for Nios V processors that are based on the RISC-V ISA. It includes the full toolchain, IDE, compiler, and debugger.



What you get with RiscFree* IDE with Intel Quartus Prime Software v22.2

- Single-shot free stand-alone installer that works out-of-the-box or integrated with the Intel Quartus Prime Software
- Initial support for Intel Agilex, Intel Stratix 10, Intel Arria 10, and Intel Cyclone 10 GX devices
- Project Manager and Build Manager including Make and CMake support with rapid import, build, and debug of Intel Quartus software-created applications
- Targeted Nios V GCC compiler toolchain fully integrated into the RiscFree* IDE with support for newlib and picolibc runtime libraries using the Nios V Hardware Abstraction Layer (HAL) application programming interface (API) for hardware access
- Runtime debug with support for the Intel® FPGA Download Cable II
- Homogeneous and heterogeneous simultaneous multi-core debug support for Nios V and Arm processor cores
- Register visualization for Arm processor cores

Hardware Development Tools

- Intel Quartus Prime Pro Edition Software
- Platform Designer
- Signal Tap logic analyzer
- System Console for low-level debugging of Platform Designer systems

Get Started

The RiscFree* IDE for Intel® FPGAs can be downloaded at www.intel.com as a stand-alone installer or as part of the Intel Quartus Prime Pro Edition Software download. To learn more about the Nios V processor and the RiscFree* IDE for Intel® FPGAs, visit www.intel.com/niosv.

Nios® II Processor

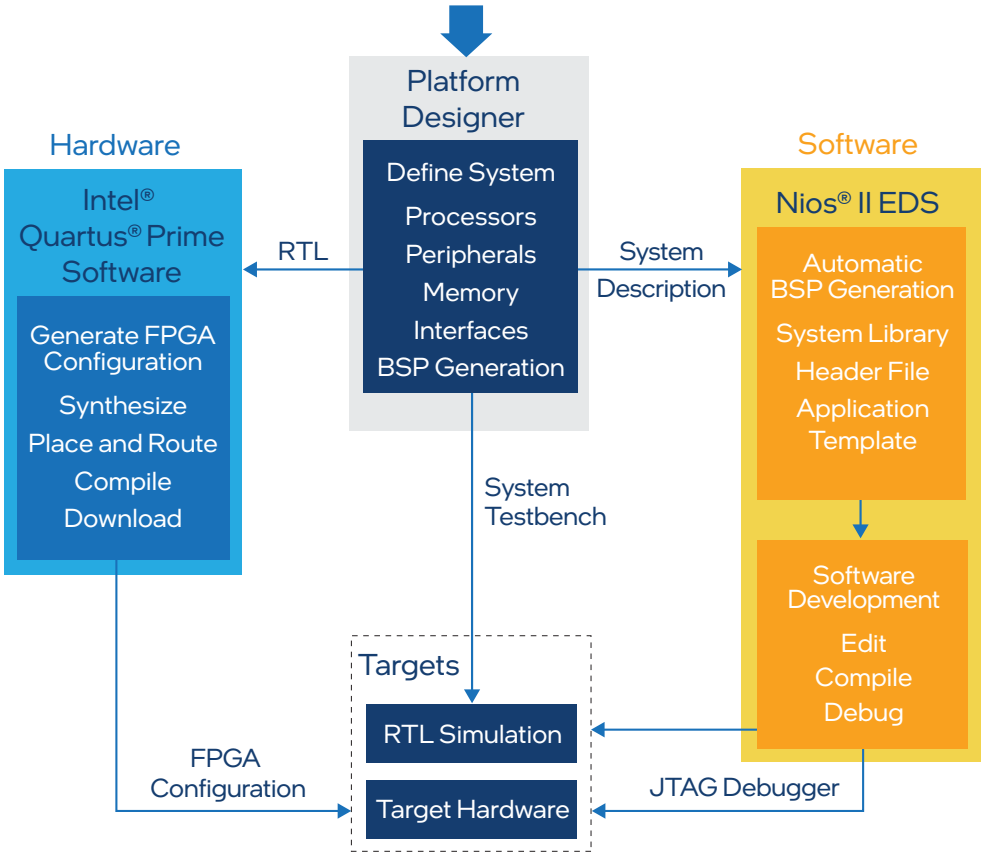
In any Intel FPGA, the Nios® II processor offers a custom system solution that has the flexibility of software and the performance of hardware. Through its innovative design, the Nios II processor leverages the logic resources of the device to provide unprecedented hard and soft real-time capabilities.

You can also use the Nios II processor together with the Arm processor in Intel SoCs to create effective multi-processor systems.

With the Nios II processor you can:

- Lower overall system cost and complexity by integrating external processors into the FPGA.
- Scale performance with multiple processors, custom instructions (hardware acceleration of a software function), or co-processor modules (hardware accelerator next to the soft processor).
- Target the Intel Agilex, Intel Stratix, Intel Arria, Intel Cyclone, or Intel MAX 10 FPGA, or the FPGA portion of the Intel Agilex, Intel Stratix 10, Intel Arria 10, Arria V, or Cyclone V SoC.
- Eliminate the risk of processor and ASSP device obsolescence.
- Take advantage of the free Nios II economy core, and the free Nios II Embedded Design Suite (EDS), to get started today.

Nios II Processor Development Flow



Nios II Processor Embedded Design Suite

The Nios II processor, the world's most versatile processor according to Gartner Research, is the most widely used soft processor in the FPGA industry. This soft processor delivers unprecedented flexibility for your cost-sensitive, real-time, safety-critical (DO-254), and applications processing needs. All Intel FPGA families support the Nios II processor.

NIOS II EDS CONTENTS
Nios II Software Build Tools for Eclipse (Nios II SBT for Eclipse) for software development · Based on Eclipse IDE · New project wizards · Software templates · Source navigator and editor
Compiler for C and C++ (GNU)
Software Debugger/Profiler
Flash Programmer
Embedded Software · Hardware Abstraction Layer (HAL) · MicroC/OS-II RTOS (full evaluation version) · Newlib ANSI-C standard library · Simple file system
Other Intel Command-Line Tools and Utilities
Design Examples

Hardware Development Tools

- Intel Quartus Prime Standard and Pro Edition Software
- Platform Designer
- Signal Tap logic analyzer plug-in for the Nios II processor
- System Console for low-level debugging of Platform Designer systems

Licensing

Getting started with the Nios II processor is now easier than ever. Not only is the Nios II EDS free, but the Nios II economy core IP is also free.

Licenses for the Nios II fast core IP are available stand-alone (IP-NIOS) or as part of the Embedded IP Suite (IPS-EMBEDDED). The Embedded IP Suite is a value bundle that contains licenses for the Nios II processor IP core, DDR1/2/3 Memory Controller IP cores, Triple-Speed Ethernet MAC IP core and 16550 - compatible UART IP core. These licenses support both Nios II Classic and Gen2 processors. These royalty-free licenses never expire and allow you to target your processor design to any Intel FPGA.

Nios II EDS: What You Get for Free!

The Nios II Embedded Design Suite (EDS) provides all the tools and software you need to develop code for the Nios II processor.
With the Nios II EDS you can:

- **Develop software with Nios II SBT for Eclipse:** Based on industry-standard Eclipse, the Nios II SBT is an integrated development environment for editing, compiling, debugging software code, and flash programming.
- **Manage board support packages (BSPs):** The Nios II EDS makes managing your BSP easier than ever. The Nios II EDS automatically adds device drivers for Intel FPGA-provided IP to your BSP, and the BSP Editor provides full control over your build options.
- **Evaluate a RTOS:** The Nios II EDS contains an evaluation version of the popular Micrium MicroC/OS-II RTOS. Product licenses can be purchased directly from Micrium.

Join the Nios II Processor Community!

Be one of many Nios II processor developers who visit the Intel FPGA Wiki, Intel FPGA Community, and the Rocketboards.org website. Intel FPGA Wiki and the Rocketboards.org website have hundreds of design examples and design tips from Nios II processor developers all over the world. Join ongoing discussions on the Nios II processor section of the Intel FPGA Community to learn more about Linux, hardware, and software development for the Nios II processor.

SUMMARY OF SOFT PROCESSORS

CATEGORY	PROCESSOR	VENDOR	DESCRIPTION
Performance-optimized processing	Nios V microcontroller core	Intel	Based on RISC-V: RV32IA. Nios V processors give you the ultimate flexibility to achieve the exact performance required for your embedded design, without overpaying for high clock frequency, power-hungry off-the-shelf processors. Due to architectural improvements, the Nios V processor has performance benefits over the Nios II processor.
Power- and cost-optimized processing	Nios II economy core	Intel	With unique, real-time hardware features such as custom instructions, ability to use FPGA hardware to accelerate a function, vectored interrupt controller, and tightly coupled memory, as well as support for industry-leading RTOSs, the Nios II processor meets both your hard and soft real-time requirements, and offers a versatile solution for real-time processing.
Real-time processing	Nios II fast core[1]	Intel	
Applications processing	Nios II fast core	Intel	A simple configuration option adds a memory management unit to the Nios II fast processor core to support embedded Linux. Both open-source and commercially supported versions of Linux for Nios II processors are available.
Safety-critical processing	Nios II SC	HCELL	Certify your design for DO-254 compliance by using the Nios II Safety Critical core along with the DO-254 compliance design services offered by HCELL.
Lockstep Solution	Nios II Lockstep dual core	Intel	Provides high diagnostic coverage, self-checking and advanced diagnostic features in full compliance with functional safety standards IEC 61508 and ISO 26262.
Safety qualification kit (Qkit)	Nios II fast, standard and economy cores	Validas AG	Enables software designers to qualify the use of Nios II Toolchain in their safety application, fulfilling the requirements of IEC 61508 up to SIL 4 and ISO 26262 up to ASIL D.

Notes:

1. With the Nios II Gen2 product the standard core is not available as a pre-configured option, however the Gen2 fast core can be configured in the Platform Designer to have the same feature set as the standard core.
2. Starting with Nios II EDS v19.1, the Nios II EDS requires the Eclipse IDE component to be manually installed. Details on installing Eclipse IDE can be found in the Nios II Software Developer Handbook.

Getting Started

To learn more about Intel's portfolio of customizable processors and how you can get started, visit www.intel.com/niosii.

Customizable Processor Portfolio Overview

PERFORMANCE AND FEATURE SET SUMMARY OF KEY PROCESSORS SUPPORTED ON INTEL FPGAS

Design Store

fpgacloud.intel.com/devstore

The Design Store contains Intel and partner FPGA design examples to assist you in designing with Intel FPGAs and associated development tools. Design examples can be filtered by device family, development kit, Intel Quartus software versions, and IP for easy search. These design examples showcase a wide range of interface IP, core function IP, configuration, embedded, and end applications. New content is continuously added and updated for all product families.

Check out the Design Store now: fpgacloud.intel.com/devstore

Intel FPGA and Partner Development Kits

www.intel.com/fpgaboards

Intel FPGA development kits provide a complete, high-quality design environment for engineers. These kits help simplify the design process and reduce time to market. Development kits include software, reference designs, cables, and programming hardware. Intel FPGA and partner development kits are listed below. For more details about these development kits or other older development kits that are available, check out our online development kits page at www.intel.com/fpgaboards.

PRODUCT AND VENDOR NAME	DESCRIPTION
INTEL AGILEX FPGA KITS	
Intel Agilex F-Series FPGA Development Kit **Intel**	This kit allows you to design and develop your Intel Agilex F-Series FPGA design, and includes all hardware and software needed to take advantage of the performance and capabilities of the Intel Agilex F-Series FPGA with E-Tile and P-Tile. This PCIe form factor board can be used to develop and test PCI Express 4.0 designs, and external memory subsystems consisting of DDR4 and QDR IV memories. The kit also includes two QSFPDD connectors supporting both optical and electrical interfaces.
INTEL STRATIX 10 FPGA KITS	
Intel Stratix 10 GX FPGA Development Kit **Intel**	This kit provides a complete design environment including all hardware and software needed to take advantage of the performance and capabilities of the Intel Stratix 10 GX FPGA. This kit can be used to develop and test PCI Express 3.0 designs, memory subsystem consisting of DDR4, DDR3, QDR IV, and RLDRAM III memories, and develop modular and scalable designs using FPGA mezzanine card (FMC) connectors.
Intel Stratix 10 GX Transceiver Signal Integrity Development Kit **Intel**	This kit provides a complete design environment including all hardware and software needed to take advantage of the performance and capabilities of the Intel Stratix 10 GX FPGA. This kit can be used to evaluate transceiver channel performance, generate and verify pseudo-random binary sequence (PRBS), and dynamically change the channel's differential output voltage (VoD), pre-emphasis, and equalization settings.
Intel Stratix 10 SX SoC Development Kit **Intel**	The kit offers a quick and simple approach for developing custom Arm processor-based SoC designs. It offers memory options, such as HiLo DDR4 and DDR4 SODIMM. There are also two FMC+ low-pin-count connectors and two quad small form factor pluggable (QSFP) connectors for transceiver channel performance. More notably, the kit offers two HPS peripheral daughtercards to expand the capabilities.
Intel Stratix 10 TX Signal Integrity Development Kit **Intel**	This kit offers a complete design environment for developing on the Intel Stratix 10 TX FPGA. It can evaluate E-Tile transceiver channel performance up to 58 Gbps PAM4 and 30 Gbps NRZ. The board has different QSFP-DD, FMC+, MXP, and SMA connectors for networking applications. It can also be used for jitter analysis and to verify physical medium attachment (PMA) compliance for 10/25/50G/100G/200G/400G Ethernet and other major standards.
Intel Stratix 10 MX FPGA Development Kit **Intel**	This kit can be used to test and develop designs using the Intel Stratix 10 MX FPGA, which features High-Bandwidth Memory (HBM). PCIe 3.0 designs can be developed as the board contains a PCIe end point connector and a PCIe root port connector. The board also contains a DIMM socket and HiLO connector for expanded memory capability.
S10VG4 **BittWare Inc.**	This PCI Express card is based on the Intel Stratix 10 FPGA and is ideal for high-density data center applications. BittWare's Viper platform offers support for large FPGA loads, up to 32 GB of DDR4 SDRAM, and 4x100 Gbps Ethernet. The card is enabled for high-speed networking with four front panel QSFP+ cages, each supporting 40/100GbE or four 10/25GbE channels. Serial expansion is available through two UltraPort SlimSAS connectors. A 1GbE interface, a pulse-per-second (PPS) input, and a USB interface are available for debug and support. The board's flexible memory configuration includes four DIMM sites that support DDR4 SDRAM and QDR.
Nallatech 520 **Nallatech**	This is a PCI Express accelerator card based on the Intel Stratix 10 FPGA designed to address a range of compute-intensive and latency-critical applications including machine learning, gene sequencing, oil and gas, and real-time network analytics. This introduces the ground-breaking single precision floating-point performance of up to 10 TFLOPS per device.

PRODUCT AND VENDOR NAME	DESCRIPTION
INTEL MAX 10 FPGA KITS	
Intel MAX 10 FPGA Nios II Embedded Evaluation Kit (NEEK) **Terasic**	This kit is a full featured embedded evaluation kit based on the Intel MAX 10 device family. The kit delivers an integrated platform that includes hardware, design tools, IP, and reference designs for developing a wide range of applications. This kit allows developers to rapidly customize their processor and IP to suit their specific needs, rather than constraining their software around the fixed feature set of the processor. The kit features a capacitive LCD multimedia color touch panel, which natively supports multi-touch gestures. An eight megapixel digital image sensor, ambient light sensor, and three-axis accelerometer make up this rich feature set, along with a variety of interfaces connecting the kit to the outside for Internet of Things (IoT) applications across markets.
Intel MAX 10 FPGA Development Kit **Intel**	This kit offers a comprehensive general-purpose development platform for many markets and applications, such as industrial and automotive. This fully featured development kit includes a 10M50DAF484C6G device, DDR3 memory, 2X 1 GbE, high-speed mezzanine card (HSMC) connector, quad serial peripheral interface, 16 bit digital-to-analog converter (DAC), flash memory, and 2X Digilent Pmod Compatible headers.
Intel MAX 10 FPGA Evaluation Kit **Intel**	The 10M08 evaluation board provides a cost-effective entry point to Intel MAX 10 FPGA design. The card comes complete with an Arduino header socket, which lets you connect a wide variety of daughtercards. Other features include an Intel MAX 10 10M08SAE144C8G device, Arduino shield expansion, access to 80 I/O through-holes, and a prototyping area.
DECA Intel MAX 10 FPGA Evaluation Kit **Arrow**	DECA is a full-featured evaluation kit featuring a 10M50DAF484C6G device. The kit includes a BeagleBone-compatible header for further I/O expansion, a variety of sensors (gesture/humidity/ temperature/CMOS), MIPI CSI-2 camera interface, LEDs, push buttons, and an onboard Intel FPGA Download Cable II.
Mpression Odyssey Intel MAX 10 FPGA IoT Evaluation Kit **Macnica**	The Macnica Intel MAX 10 FPGA evaluation kit connects and controls your FPGA design via Bluetooth using the Mpression Odyssey Smartphone application. This kit also includes a10M08U169C8G device, SDRAM, Arduino shield expansion capability, and Bluetooth SMART connectivity module.
STRATIX V FPGA KITS	
Stratix V Advanced Systems Development Kit **Intel**	This kit is a complete systems design environment that includes both the hardware and software needed to begin architecture development and system design using Stratix V FPGAs. The PCI Express-based form factor utilizes a x16 edge connector, and includes high memory bandwidth to DDR3, QDR II+, and serial memory. Multiple high-speed protocols are accessible through FMC and HSMC connections. A one year license for the Intel Quartus Prime Software is available with this kit.
Stratix V GX FPGA Development Kit **Intel**	This kit provides a full-featured hardware development platform for prototyping and testing high-speed serial interfaces to a Stratix V GX FPGA. This kit includes the PCI Express x8 form factor, two HSMC connectors for expandability, and Ethernet, USB, and SDI interfaces. Memory includes one x72 DDR3 SDRAM, one RLDRAM II x18 QDR II+ SRAM, and flash memory. This kit also includes two SMA connectors for a differential transceiver output. Several programmable oscillators are available and other user interfaces include three user push buttons, one 8-position DIP switch, 16 user LEDs, an LCD display, and power and temperature measurement circuitry.
Transceiver Signal Integrity Development Kit, Stratix V GX Edition **Intel**	This kit enables a thorough evaluation of transceiver signal integrity and device interoperability. Features include seven full-duplex transceiver channels with SMA connectors, two 14G backplane connectors (from Amphenol and Molex), four programmable clock oscillators, four user push buttons, one 8-position DIP switch, eight user LEDs, a 7-segment LCD display, power and temperature measurement circuitry, and Ethernet, an embedded Intel FPGA Download Cable, and JTAG interfaces.
Transceiver Signal Integrity Development Kit, Stratix V GT Edition **Intel**	The Stratix V GT Transceiver Signal Integrity Development Kit provides a platform for electrical compliance testing and interoperability analysis. The accessibility to multiple channels allows for real-world analysis as implemented in the system with transceiver channels available through SMA and popular backplane connectors. This development kit can be used for evaluation of transceiver link performance up to 25.7 Gbps, generation and checking pseudo-random binary sequence (PRBS) patterns via an easy-to-use GUI that does not require the Intel Quartus Prime Software, access advanced equalization to fine-tune link settings for optimal bit error ratio (BER), jitter analysis, and verifying physical media attachment (PMA) interoperability with Stratix V GT FPGAs for targeted protocols, such as CEI-25/28G, CEI-11G, PCI Express 3.0, 10GBASE-KR, 10 Gigabit Ethernet, XAUI, CEI-6G, Serial RapidIO, HD-SDI, and others. You can use the built-in high speed backplane connectors to evaluate custom backplane performance and evaluate link BER.
100G Development Kit, Stratix V GX Edition **Intel**	This kit enables a thorough evaluation of 100G designs. It supports 10G/40G line interfaces through optical modules, and applications requiring external memory interfaces through one x18 QDR II and six x32 DDR3 memory banks. With this kit, you can evaluate transceiver performance up to 12.5 Gbps, and verify PMA compliance to standards, such as 10G/40G/100G Ethernet, Interlaken, CEI-6G/11G, Serial RapidIO, PCI Express (1.0, 2.0, and 3.0), and other major standards. This kit can also validate interoperability between optical modules, such as SFP, SFP+, QSFP, and CFP.
DSP Development Kit, Stratix V Edition **Intel**	The DSP Development Kit, Stratix V Edition provides a complete design environment that includes all the hardware and software you need to begin developing DSP intensive FPGA designs immediately. The development kit is RoHS-compliant. You can use this development kit to develop and test PCI Express designs at data rates up to 3.0, develop and test memory subsystems for DDR3 SDRAM or QDR II SRAM memories, and use the HSMC connectors to interface to one of over 35 different HSMCs provided by Intel partners, supporting protocols such as Serial RapidIO, 10 Gbps Ethernet, SONET, CPRI, OBSAI, and others.

PRODUCT AND VENDOR NAME	DESCRIPTION
INTEL ARRIA 10 FPGA KITS	
Intel Arria 10 FPGA Development Kit **Intel**	This kit provides a complete design environment including hardware and software for prototyping and testing high-speed serial interfaces to an Intel Arria 10 GX FPGA. This kit includes the PCI Express x8 form factor, two FMC connectors for expandability, Ethernet, USB, and SDIs. The board includes one HiLo connector for plugging in DRAM and SRAM daughtercards. Supported daughtercard formats include DDR4 x72 SDRAM, DDR3 x72 SDRAM, RLDRAM 3 x36, and QDR IV x36 SRAM. The board includes SMA connectors for transceiver output, clock output, and clock input. Several programmable oscillators are available and other user interfaces include user push buttons, dual in-line package (DIP) switches, bi-color user LEDs, an LCD display, power, and temperature measurement circuitry. This development kit comes with a one-year license for the Intel Quartus Prime Software.
Intel Arria 10 FPGA Signal Integrity Kit **Intel**	This kit enables a thorough evaluation of transceiver signal integrity and device interoperability. Features include six full-duplex transceiver channels with 2.4 mm SMA connectors, four full-duplex transceiver channels to Amphenol Xcede+ backplane connector, four full-duplex transceiver channels to C form factor pluggable (CFP2) optical interface, four full-duplex transceiver channel to QSFP+ optical interface, one transceiver channel to SFP+ optical interface, and ten full-duplex transceiver channels to Samtec BullsEye high-density connector. This board also includes several programmable clock oscillators, user push buttons, DIP switches, user LEDs, a 7-segment LCD display, power and temperature measurement circuitry, Ethernet, an embedded Intel FPGA Download Cable II, and JTAG interfaces. This development kit comes with a one-year license for the Intel Quartus Prime Software.
Intel Arria 10 SoC Development Kit **Intel**	This kit offers a quick and simple approach for developing custom Arm processor-based SoC designs. The Intel Arria 10 SoCs offers full software compatibility with previous generation SoCs, a broad ecosystem of Arm software and tools, and an enhanced FPGA and DSP hardware design flow. This kit includes an Intel Arria 10 10AS066N3F40I2SG SoC, PCI Express 3.0 protocol support, a dual FMC expansion headers, two 10/100/1000 SGMII Ethernet ports, one 10/100/1000 RGMII Ethernet port, two 10GbE small form factor pluggable (SFP) cages, two 1GB DDR4 HPS HiLo memory card, DDR4 SDRAM, NAND, quad SPI, SD/MICRO boot flash cards, character LCD, display port, and SDI port.
Attila Instant-Development Kit Intel Arria 10 FPGA FMC IDK **REFLEX**	This kit provides out-of-the-box experience, combining compact hardware platform and an efficient intuitive software environment. This kit is designed for high-performance serial transceiver applications using Intel Arria 10 GX 1150 KLEs. Hardware, software design tools, IP, and pre-verified reference designs included. Its unique installation and GUI allows an immediate start, and its reference designs enable fast turn-around designs, shortening and securing the developments.
Alaric Instant-Development Kit Intel Arria 10 SoC FMC IDK **REFLEX**	This kit provides out-of-the-box experience, combining compact hardware platform and an efficient intuitive software environment. This kit is designed for high-performance serial transceiver applications using an Intel Arria 10 SoC with 660 KLEs and an Arm dual-core Cortex-A9 MPCore. Its unique installation and GUI allows an immediate start, and its reference designs enable fast turn-around designs, shortening and securing the developments.
Nallatech 510T **Nallatech**	Nallatech 510T is an FPGA co-processor that is designed to deliver ultimate performance per watt for compute-intensive data center applications. The 510T is a GPU-sized 16-lane PCI Express 3.0 card featuring two of Intel's new floating-point enabled Intel Arria 10 FPGAs delivering up to 16 times the performance of the previous generation†. Applications can achieve a total sustained performance of up to 3 TFLOPS.
INTEL CYCLONE 10 FPGA KITS	
Intel Cyclone 10 LP Evaluation Kit **Intel**	This kit provides an easy-to-use platform for evaluating Intel Cyclone 10 LP FPGA technology and Intel Enpirion regulators. This evaluation board enables you to develop designs for Intel Cyclone 10 LP FPGAs via Arduino UNO R3 shields, Digilent Pmod Compatible cards, GPIOs, or Ethernet connector. This kit also measures key Intel Cyclone 10 LP FPGA power supplies and reuse the kit's PCB schematic as a model for your design.
Intel Cyclone 10 GX FPGA Development Kit **Intel**	This kit is an ideal starting point for developing applications, such as embedded vision, factory automation, and surveillance. With this development kit, you can develop Intel Cyclone 10 GX FPGA-based designs with expansion through PCIe 2.0, USB 3.1, SFP+, and RJ-45.

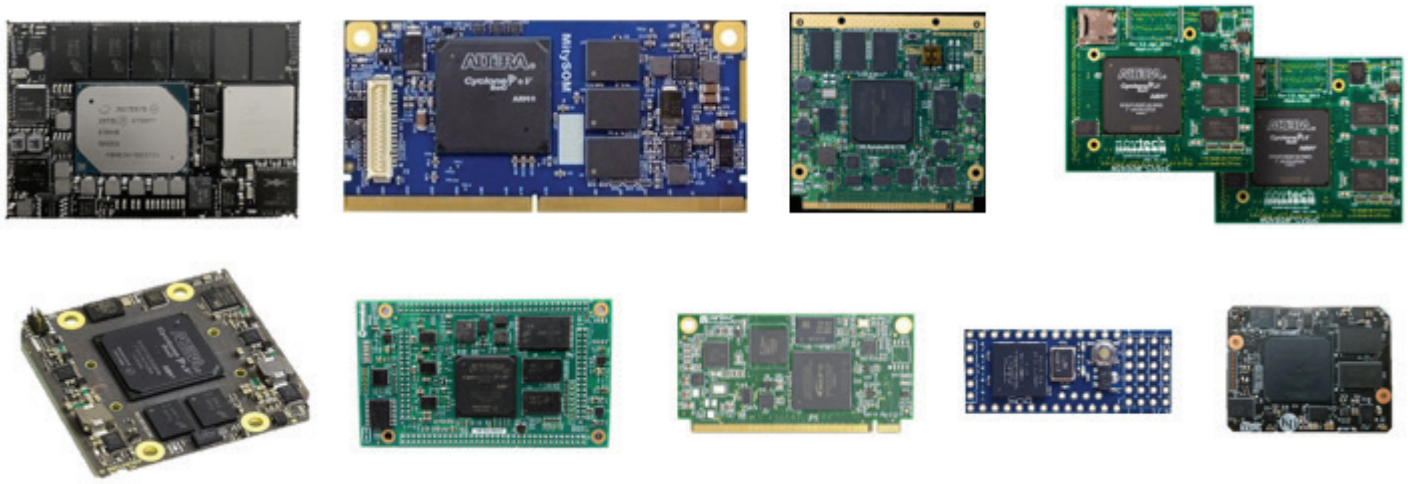
PRODUCT AND VENDOR NAME	DESCRIPTION
ARRIA V FPGA AND SoC KITS	
Arria V GX Starter Kit, Arria V GX Edition **Intel**	This kit provides a low-cost platform for developing transceiver I/O-based Arria V GX FPGA designs. This kit includes the PCI Express x8 form factor, one HSMC connector, a 32 bit DDR3 SDRAM device, one-channel high-speed transceiver input and output connected to SMAs, HDMI output, SDI input and output, 16x2 LCD display, and flash memory.
Arria V SoC Development Kit and SoC Embedded Design Suite **Intel**	The Arria V SoC Development Kit offers a quick and simple approach to develop custom Arm processor-based SoC designs. Intel's midrange, transceiver-based Arria V FPGA fabric provides the highest bandwidth with the lowest total power for midrange applications such as remote radio units, 10G/40G line cards, medical imaging, broadcast studio equipment, and the acceleration of image- and video-processing applications. This development kit includes the SoC Embedded Design Suite software development tools. The development board has PCI Express 2.0 x4 lanes (endpoint or rootport), two FMC expansion headers, dual Ethernet PHYs, and various DRAM and flash memories.
CYCLONE V FPGA AND SoC KITS	
Cyclone V E FPGA Development Kits **Intel**	The Cyclone V E Development Kit offers a comprehensive general-purpose development platform for many markets and applications, including industrial, networking, military, and medical applications. The kit features an Intel Cyclone V device and a multitude of onboard resources including multiple banks of DDR3 and LPDDR2 memory, LCD character display, LEDs, user switches, USB, and RJ-45 connectors. The Cyclone V E FPGA Development Kit gives industrial equipment designers greater flexibility in implementing real-time Ethernet communications with industrial Ethernet IP cores.
Cyclone V GT FPGA Development Kit **Intel**	This kit can be used to prototype Cyclone V GT FPGA or Cyclone V GX FPGA applications. It offers a quick and simple way to develop low-cost and low-power system-level designs and achieve rapid results. This kit supports a myriad of functionalities, such as FPGA prototyping, FPGA power measurement, transceiver I/O performance up to 5 Gbps, PCI Express 2.0 x4 (at 5 Gbps per lane), endpoint or rootport support.
Cyclone V SoC Development Kit **Intel**	The Cyclone V SoC Development Kit offers a quick and simple approach to develop custom Arm processor-based SoC designs accompanied by Intel's low-power, low-cost Cyclone V FPGA fabric. This kit supports a wide range of functions, such as processor and FPGA prototyping and power measurement, industrial networking protocols, motor control applications, acceleration of image- and video-processing applications, PCI Express x4 lane with ~1,000 MBps transfer rate (endpoint or rootport).
Cyclone V GX Starter Kit **Terasic Technologies**	The Cyclone V GX Starter Kit offers a robust hardware design platform based on Cyclone V GX FPGA. This kit is optimized for the lowest cost and power requirement for transceiver applications with industry-leading programmable logic for ultimate design flexibility. The Cyclone V Starter Kit development board includes hardware, such as Arduino Header, onboard Intel FPGA Download Cable circuit, audio and video capabilities, and an onboard HSMC connector with high-speed transceivers that allows for an even greater array of hardware setups.
DE0-Nano-SoC Kit **Terasic Technologies**	The DE0-Nano-SoC Kit combines a robust, Cyclone V SoC-based development board and interactive reference designs into a powerful development platform. This low-cost kit is an interactive, web-based guided tour that lets you quickly learn the basics of SoC development and provides an excellent platform on which to develop your own design. The board includes a Gigabit Ethernet port, USB 2.0 OTG port, SD card flash, 1 GB DDR3 SDRAM, an Arduino header, two 40-pin expansion headers, onboard Intel FPGA Download Cable circuit, 8-channel A/D converter, accelerometer, and much more.
MAX V CPLD KITS	
MAX V CPLD Development Kit **Intel**	This low-cost platform will help you quickly begin developing low-cost, low-power CPLD designs. Use this kit as a stand-alone board or combined with a wide variety of daughtercards that are available from third parties. With this platform, you can develop designs for the 5M570Z CPLD and build upon example designs provided.
STRATIX IV FPGA KITS	
100G Development Kit, Stratix IV GT Edition **Intel**	This kit enables a thorough evaluation of 100G designs. It supports 10G/40G line interfaces through optical modules, and applications requiring external memory interfaces through four x18 QDR II and four x32 DDR3 memory banks. With this kit, you can evaluate transceiver performance up to 11.3 Gbps, verify PMA compliance to standards, such as 10G/40G/100G Ethernet, Interlaken, CEI-6G/11G, Serial RapidIO, PCI Express (1.0, 2.0, and 3.0), and other major standards. This kit can also validate interoperability between optical modules, such as SFP, SFP+, QSFP, and CFP.

PRODUCT AND VENDOR NAME	DESCRIPTION
CYCLONE IV FPGA KITS	
Cyclone IV GX FPGA Development Kit **Intel**	This kit provides a comprehensive design environment that allows you to quickly develop low-cost and low-power FPGA system-level designs. This kit includes the PCI Express short card form factor, two HSMC connectors, and a 10/100/1000 Mbps Ethernet interface. Onboard memory includes 128 MB DDR2 SDRAM, 64 MB flash, and 4 MB SSRAM. This kit also includes SMA connectors, and 50 MHz, 100 MHz, and 125 MHz clock oscillators, as well as user interfaces including push buttons, LEDs, and a 7-segment LCD display.
DEO-Nano Development Board **Terasic Technologies**	The DE0-Nano Development Board is a compact-sized FPGA development platform suited for prototyping circuit designs such as robots and "portable" projects. The board is designed to be used in the simplest possible implementation targeting the Cyclone IV device up to 22,320 LEs. This kit allows you to extend designs beyond the DE0-Nano board with two external general-purpose I/O (GPIO) headers and allows you to handle larger data storage and frame buffering with onboard memory devices including SDRAM and EEPROM. This kit is lightweight, reconfigurable, and suitable for mobile designs without excessive hardware. This kit provides enhanced user peripheral with LEDs and push buttons and three power scheme options including a USB Mini-AB port, 2-pin external power header, and two DC 5-V pins.
Industrial Networking Kit **Terasic Technologies**	The Industrial Networking Kit (INK) offers a comprehensive development platform for industrial automation and applications. The kit consists of the DE2-115 board featuring the Cyclone IV device and dual 10/100/1000-Mbps Ethernet, 128 MB SDRAM, 8 MB flash memory, 2 MB SRAM, HSMC and GPIO connectors, USB 2.0, an SD card slot, switches and buttons, LEDs, 16x2 display, audio and video, and VGA-out. The kit also includes an Industrial Communications Board (ICB-HSMC) that supports RS-485, RS-232, CAN, and additional I/O expansion.
DE2-115 Development and Education Board **Terasic Technologies**	This board is part of the DE2 educational development board series and features the Cyclone IV E EP4CE115 FPGA. The DE2-115 offers an optimal balance of low cost, low power, and a rich supply of logic, memory and DSP capabilities, as well as interfaces to support mainstream protocols including GbE. A HSMC connector is provided to support additional functionality and connectivity via HSMC daughtercards and cables.
MAX II CPLD Kits	
MAX II/MAX IIZ Development Kit **System Level Solutions**	This board provides a hardware platform for designing and developing simple and low-end systems based on MAX II or MAX IIZ devices. The board features a MAX II or MAX IIZ EPM240T100Cx or EPM240ZM100Cx device with 240 LEs and 8,192 bits of user flash memory (UFM). The board also supports vertical migration into EPM570T100Cx devices with 570 LEs and 8,192 bits of UFM.

Intel FPGA-Based SoM Partner Ecosystem

www.intel.com/fpgasoms

System on modules (SoMs) provide a compact, pre-configured solution with FPGA, memory, and software which is perfect for prototyping, proof-of-concept, and initial system development and production. SoMs enable you to focus on development of your IP, algorithms, and human/mechanical interfaces rather than spending time on the fundamentals of the processor and electrical system and software bring-up. In many cases, SoMs can also make sense for full system production.



Customer Benefits

- Faster time to market by off-loading complex board design
- Production-ready hardware for immediate deployment
- Versatile product design and application fit from various partners
- Minimize component supplier management

Target Application

- General embedded applications
- Industrial PC, factory automation, and control applications
- Machine vision, surveillance camera, and retail applications
- Networking and security applications
- Test and measurement equipment

Exor International	Titanium	microSOM us02	Cyclone® V SoC (SE)	Dual-core Arm Cortex-A9 MPCore processor	25K/110K LEs	Industrial, 5G, AI	48x35
		GigaSOM gS01	Intel® Cyclone® 10 GX + Intel Atom® E39xx	Intel Atom x5-E3930 / x5-E3940 / x7-E3950	220K LEs		
Mantaro / HITEK systems	Titanium	Agilex HPC SOM	Intel® Agilex™	Quad-core 64-bit Arm Cortex-A53	1,437K LEs	HPC	174x138
		Agilex eSOM	Intel Agilex	Quad-core 64-bit Arm Cortex-A53	1,437K LE	Embedded Designs, Edge Appliances	120 x 120
Reflex CES	Titanium	COMXpress Stratix® 10 SoC	Intel® Stratix® 10 SX	Quad-core 64-bit Arm Cortex-A53	2,753K LEs	HPC, Video & Vision	125x95
		Achilles Arria® 10 SoM	Intel® Arria® 10 SoC	Dual-core Arm Cortex-A9 MPCore processor	270K/660K LEs	Industrial, Video & Vision, Radar Systems	85x95
Terasic	Titanium	Apollo Agilex SoM	Intel Agilex	Quad-core 64-bit Arm Cortex-A53	1,437K LEs	AI Edge, HPC	145x133
		Apollo S10 SoM	Intel Stratix 10 SX	Quad-core 64-bit Arm Cortex-A53	2,753K LEs	General purpose	151x185
		TSoM	Cyclone VSoC (SE)	Dual-core Arm Cortex-A9 MPCore processor	110K LE	General purpose	50 x 70

Partner	Partner Tier	SoM Product Name	Intel Device	Processor	FPGA Logic Elements	Target Application	Size (mm)
Alorium Technology	Gold	Sno	Intel® MAX® 10		16K LEs	MCU replace	18x43
		Evo M51	Intel MAX 10	Atmel SAMD51 32-bit Arm Cortex-M4 processor	25K LEs	Motor Control	23x56
Critical Link	Gold	MitySOM-A10S	Intel Arria 10 SoC	Dual-core Arm Cortex-A9 MPCore processor	270K LEs	General purpose	82x39
		MitySOM-5CSX	Cyclone V SoC (SX)		Up to 110K LEs		
Enclustra	Gold	Mercury+ AA1	Intel Arria 10 SoC	Dual-core Arm Cortex-A9 MPCore processor	270K/480K LEs	Industrial	TBD
		Mercury SA1	Cyclone V SoC (SX)		110K LEs		56x54
		Mercury+ SA2	Cyclone V SoC (ST)		110K LEs		74x54
		Mars MA3	Cyclone V SoC (SX)		110K LE		68x30
		Mercury CA1	Cyclone® IV		75K/115K LEs	General purpose	56x54
GEB Enterprise	Gold	PICO SOM CARD MAX10	Intel MAX 10		Up to 50K LEs	Industrial	TBD
iWave System Technologies	Gold	iW-Rainbow-G24M	Intel Arria 10 SoC / GX	Dual-core Arm Cortex-A9 MPCore processor	660K LEs / 1150K LEs	ASIC prototyping, General Purpose	95x75
		iW-RainboW-G17M	Cyclone V SoC (SX)		Up to 110K LEs		70x70
Kondo Electronics	Gold	KEIm-08	Intel MAX 10		8K LEs	MCU replacement	70x35
		KEIm-25	Intel MAX 10		25K LEs	General purpose	
		KEIm-CVSoC	Cyclone V SoC (SX)	Dual-core Arm Cortex-A9 MPCore processor	85K LEs	Video & Vision, AI, Industrial	
MRA Digital	Gold	C5SOC-SOM-PROCESSOR	Cyclone V SoC (SX)	Dual-core Arm Cortex-A9 MPCore processor	110K LEs	Video & Vision, Industrial	66x56
		MAX 10-SOM-50	Intel MAX 10		50K LE	General purpose	64x66
NDR	Gold	N-EMB-100/110	Cyclone V SoC (SX)	Dual-core Arm Cortex-A9 MPCore processor	110K LEs	Industrial networking	TBD
		N-EMB-120	Intel MAX 10		50K LEs	Industrial networking	TBD
Novtech	Gold	NOVSOM CVL	Cyclone V SoC (SE)	Dual-core Arm Cortex-A9 MPCore processor	Up to 110K LEs	General purpose	68x35
		NOVSOM CV	Cyclone V SoC (SE, SX, ST)		Up to 110K LEs		73x64
Falcon Nano	Gold	MAX 10-System on Module 256 pin	Intel MAX 10		8K LE	Industrial IoT	81x81
Aries	Member	MAX	Intel Arria 10 SoC	Dual-core Arm Cortex-A9 MPCore processor	480K/660K LEs	General purpose	60x110
		MCXL	Intel Cyclone 10 LP		16K/40K/ 55K LEs		37x90
		MCV	Cyclone V SoC (SE, SX)	Dual-core Arm Cortex-A9 MPCore processor	25K/40K/85K/ 110K LEs		74x42
		MCVS (SMARC2.0)	Cyclone V SoC (SE, SX)	Dual-core Arm Cortex-A9 MPCore processor	25K/40K/85K/ 110K LE		82x50
		MX10	Intel MAX 10		4K/8K/16K/ 50KLE		70x35
		SpiderSOM	Intel MAX 10		2K/8K LEs		70x35
Macnica	Distributor	Borax SOM	Cyclone V SoC (SE)	Dual-core Arm Cortex-A9 MPCore processor	Up to 110K LEs	General purpose	95x55

Intel Partner Alliance Program

www.intel.com/partneralliance

The Intel® Partner Alliance is a program designed to enhance the value, relevance, and the experience we deliver to our partners. The unification of former Intel partner programs such as the Design Solutions Network and the FPGA Partner Program, to name a few, will allow Intel and its partners to continue driving the industry to innovate solutions with powerful technology. These investments will help enable disruption and accelerate new market opportunities in an increasingly data-centric world. From leading-edge technologies to sophisticated sales enablement and powerful partner networking, the Intel Partner Alliance will connect partners to a world of innovation.

Join the Intel Partner Alliance

Visit the Intel® Solutions Marketplace to connect with thousands of partners, opening the door to matchmaking opportunities to grow your business and innovate. Access the vast catalog of Intel Solutions Marketplace offerings and Partner Directory – the fastest way to find products, solutions, and Intel Partner Alliance partners that meet your business needs. The Intel Solutions Marketplace is a vast resource in which to network with industry providers and discover offerings to meet their business needs.

Training Overview

www.intel.com/fpgatraining

Intel FPGA technical training offers many ways to learn. Sharpen your FPGA design skills today! All public training is free to attend.

ON-DEMAND TRAINING	LEARN FPGA DESIGN TOPICS FROM EXPERT INSTRUCTORS, ALL FOR FREE!	QUICK VIDEO
Pre-recorded presentations and demonstrations, generally 30 minutes long. Online classes are free and available at any time, from any computer with Internet access with non-restrictive firewall. You can find some of these online training courses on the Intel FPGA Technical Training YouTube Channel.	Most classes are taught in a series of two half-day sessions. The virtual classroom allows you to attend at work or from home. During class, access to a remote lab environment is provided – which means no setup is required for you to attend.	These short how-to YouTube videos teach specific skills to help solve your issues. Check out the Intel FPGA Quick Videos page or the Engineer to Engineer: How-To YouTube Channel.

Training

Instructor-Led and Virtual Classes

COURSE CATEGORY	GENERAL DESCRIPTION
High-Level Design	Accelerate algorithm performance with Open Computing Language (OpenCL) by offloading to an FPGA.
Design Languages	Attain the skills needed to design with Verilog HDL and VHDL for programmable logic.
Intel Quartus Prime Software	Acquire design entry, compilation, programming, verification, and optimization skills by learning how to use both basic and advanced features of the Intel Quartus Prime Software.
Design Optimization Techniques	Learn design techniques and Intel Quartus Prime Software features to improve design performance. Note: While the focus of this course is the Intel Stratix 10 device family, many of the techniques you will learn can be used to improve performance in other device architectures.
System Integration	Build hierarchical systems by integrating IP and custom logic.
Embedded System Design	Learn to design an Arm-based processor system in an Intel FPGA
System Design	Solve DSP and video system design challenges using Intel technology.
Connectivity Design	Build high-speed, gigabit interfaces using embedded transceivers found in leading-edge FPGA families.

† Tests measure performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. Consult other sources of information to evaluate performance as you consider your purchase. For more complete information about performance and benchmark results, visit www.intel.com/benchmarks.
