

MOD5270

Ethernet Core Module

100 Version with RJ-45 | 200 Version with 10-pin header

DATASHEET

Key Points

- Use as a high-performance single board computer or add Ethernet connectivity to a new or existing design
- Customize with a development kit and begin writing application code immediately!
- Industrial temperature range (-40°C to 85°C)

Device Connectivity

- 10/100Mbps Ethernet
- 3 UARTs, I²C, and SPI
- SD/MMC flash card ready
- 47 digital I/Os
- 16-bit address bus and 32-bit data bus with 3 chip selects

Performance and memory

- 32-bit 147.5 MHz Processor
- 8MB SDRAM and 512KB Flash

Companion development kit

The following is available with the development kit:

- Customize any aspect of operation including web pages, data filtering, or custom network applications
- Development software: NB Eclipse IDE, Graphical debugger, deployment tools, and examples
- Communication software: TCP/IP stack, HTTP web server, FTP, E-mail, and flash file system
- System software: uC/OS RTOS, ANSI C/C++ compiler and linker

The following optional software modules are not included with kit and are sold separately:

- Embedded SSL & SSH Security Suite (Module License Version)
- SNMP

Specifications

Processor and Memory

32-bit Freescale ColdFire 5270 running at 147.5MHz with 8MB SDRAM, 512KB Flash, and 64Kb SRAM.

Network Interface

10/100 BaseT with RJ-45 connector (100 Version)

10-pin header (200 Version)

Data I/O Interface (J1 and J2)

- Up to 3 UARTs
- Up to 47 digital I/O
- Up to 3 external timer in and up to 4 timer outputs
- Up to 4 external IRQs
- I²C interface
- SPI interface
- SD/MMC flash card ready
- 16-bit address bus and 32-bit data bus with 3 chip selects

Flash Card Support

FAT32 support for SD Cards up to 8GB (requires exclusive use of SPI signals). Card types include SD/MMC (up to 2GB) and SDHC.

Serial Configurations

The UARTs can be configured in the following way:

- 3 TTL ports
- Add external level shifter for RS-232
- Add external level shifter for RS-422/485 (up to three ports)

Note: UART 0/1/2 also provides RTS/CTS hardware handshaking signals.

LEDs

Link and Speed (100 Version only, on RJ-45)

Physical Characteristics

Dimensions (inches): 2.60" x 2.00"

Weight: 1 oz.

Mounting Holes: 2 x 0.125" dia.

Power

DC Input Voltage: 3.3V @ 380mA typical

Environmental Operating Temperature

-40° to 85° C

RoHS Compliance

The Restriction of Hazardous Substances guidelines ensure that electronics are manufactured with fewer environment harming materials.

Part Numbers

MOD5270 Ethernet Core Module (100 Version, with RJ-45)

Part Number: MOD5270-100IR

MOD5270 Ethernet Core Module (200 Version, with 10-pin header)

Part Number: MOD5270-200IR

MOD5270 LC Development Kit

Part Number: NNDK-MOD5270LC-KIT

Kit includes all the hardware and software you need to customize the included platform hardware. See NetBurner Store product page for package contents. Note: Includes the MOD-DEV-70 development board.

MOD5270 Development Kit

Part Number: NNDK-MOD5270-KIT

Kit includes all the hardware and software you need to customize the included platform hardware. See NetBurner Store product page for package contents. Note: Includes the MOD-DEV-100 development board.

Embedded SSL & SSH Security Suite (Module License Version)

Part Number: NBLIC-SSL-MODULE

Only required if you are using a development kit.

SNMP V1 (Module License Version)

Part Number: NBLIC-SNMP

Available as an option if you are using a development kit.

Pinout and Signal Description

The 200 version board has a 10-pin header instead of an RJ-45 jack. This header enables you to relocate the jack to another location or to add a different jack with power over ethernet (PoE) capabilities to your module. Table 1 provides descriptions of pin function of the 10-pin header.

Refer to the application note, "Adding an External Ethernet RJ-45 Connector and PCB Layout Guidelines for NetBurner -200 Version Modules", for details and examples.

Table 1: Pinout and Signal Descriptions for JP2 Header ⁽¹⁾

Pin	Signal	Description
1	TX-	Transmit -
2	TX+	Transmit +
3	TXCT ¹	Transmit Data Center Tap
4	RX+	Receive +
5	RX-	Receive -
6	RXCT ¹	Receive Data Center Tap
7	GND	Ground
8	N/C	Not Connected
9	LED	LED control sink, link/activity
10	LED	LED control sink, speed

Note:

1. Ethernet magnetics center tap voltage provided by NetBurner device

The module has two dual in-line 50 pin headers which enable you to connect to one of our standard NetBurner Carrier Boards, or a board you create on your own. Table 2-3 provides descriptions of pin function of the module header.

25	H3	D27			Data Bus - Data 27	3.3VDC

Note:

- Active low signals, such as \overline{RESET} , are indicated with an overbar
- The TIP signal is the logical AND of *CS1, *CS2 and *CS3. TIP can be used to control an external data bus buffer for the data bus signals. An example circuit design can be found on the Module Development Board schematic. An external data bus buffer is recommended for any designs that use data bus signals D16 - D31.
- The CLKOUT signal is 1/2 the system frequency of 147.456 MHz.
- This is the LSB (Least-significant bit). This bit is unused for 16-bit ports
- This is the MSB (Most-significant bit)
- Each UART can be clocked from an internal or external source. For external clocks, each UARTn, can be clocked by the corresponding DTn_IN input pin.
- If using I²C, pull-up resistors must be added to SDA/SCL.
- The Mod5270 provides QSPI chip selects QSPI_CS0, QSPI_CS1 & QSPI_CS3.
- 32-bit mode only
