1.25G Ethernet Optical Bypass Module

Dual Ports 1.25G Base-LX

OBM-A3BA2-C01

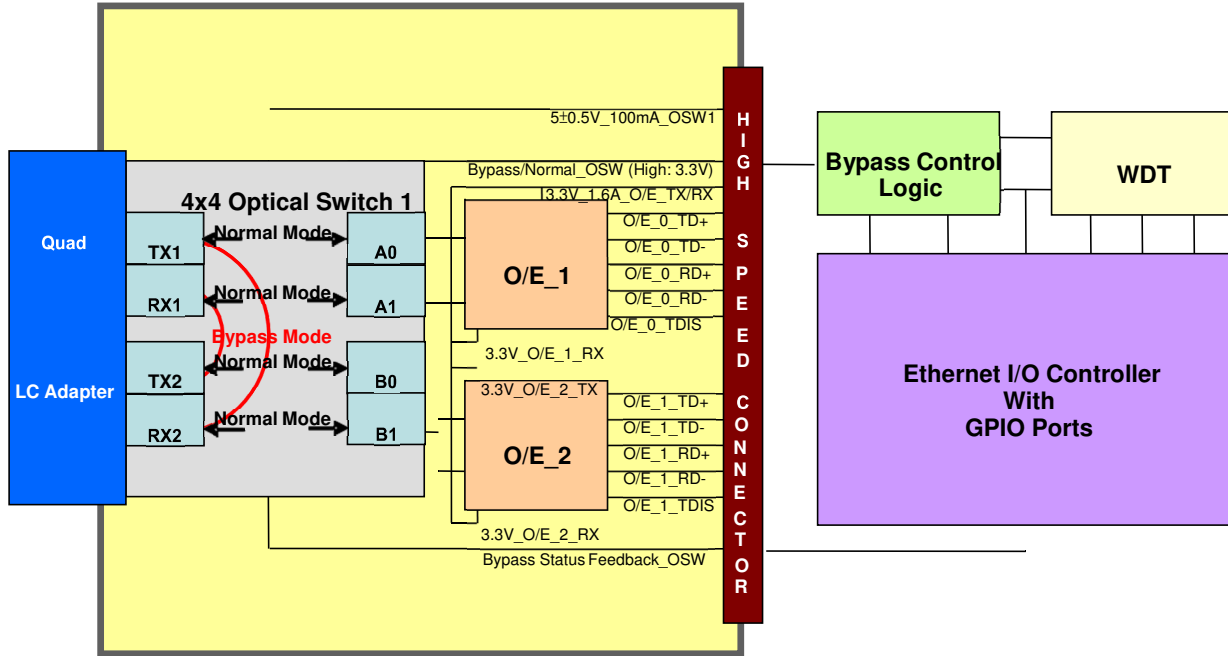

Product Overview

FormericaOE Dual Port 1.25 Gbit/s Optical Bypass Module is a compact box that contains two 1.25 G Base-LX1310nm (10KM) ports and can be integrated with I/O ports controllers to be a Network Interface Card (NIC). The FormericaOE Dual Port 1.25 Gbit/s Optical Bypass Module is targeted to inline network system that maintains network connectivity when power failure or system fails. FormericaOE Dual Port 1.25 Gbit/s Optical Bypass Module supports Normal and Bypass modes, and can be controlled to perform the Block mode. In Normal mode, the ports are independent interfaces. In Bypass mode, all packets received from one port are transmitted to the adjacent port. In Block mode, the module blocks the route. FormericaOE Dual Port 1.25 Gbit/s Optical Bypass Module can Bypass or Block its I/O ports on a host system failure, power off, or up on software request. FormericaOE Dual Port 1.25 Gbit/s Optical Bypass Module can be integrated with any brand's Controllers CPU. It is suitable for connecting with in-line equipment's for power failure or system maintenance. When the In-Line unit is not on or is in bypass mode, the relays within the Optical Bypass Module are set to bridge the optical signals directly through the optical switch, completely bypassing the In-Line equipment. If the In-Line equipment is on and operating normally, then it supplies power to the switch through a high speed connector PIN. Compact and competitive cost, this module provides excellent performance on your network.

Features

- Reliable Passive Fiber Bypass (Latching)
- Low Return Loss
- Available in 9/125µm Single mode Fiber
- PCB Mountable Type
- Fast Ethernet Standard Compliant
- Digital Diagnostic SFF-8472 Rev.10.2 Compliant
- SONET/SDH Standard Compliant
- Two Dual LC Adapter
- Class 1 Laser Product Complies with EN 60825-1
- 1.25G-BASE-LX are available
- Compliant with CE& FCC Standard
- Compact Format and ROHS Compliant

Notes:

1. TX Fault is an open collector/drain output, which should be pulled up with a 4.7K – 10K Ω resistor on the host board. Pull up voltage between 2.0V and VccT, R+0.3V. When high, output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to <0.5V.
2. TX disable is an input that is used to shut down the transmitter optical output. It is pulled up within the module with a 4.7 – 10 K Ω resistor. Its states are:
 - ◆ Low (0 – 0.8V): Transmitter on
 - ◆ (>0.8, < 2.0V): Undefined
 - ◆ High (2.0 – 3.465V): Transmitter Disabled
 - ◆ Open: Transmitter Disabled
3. Mod-Def 1,2, These are the module definition pins. They should be pulled up with a 4.7K – 10K Ω resistor on the host board. The pull-up voltage shall be VccT or VccR (see Section IV for further details). Mod-Def 0 is grounded by the module to indicate that the module is present Mod-Def 1 is the clock line of two wire serial interface for serial ID Mod-Def 2 is the data line of two wire serial interface for serial ID
4. LOS (Loss of Signal) is an open collector/drain output, which should be pulled up with a 4.7K – 10K Ω resistor. Pull up voltage between 2.0V and VccT, R+0.3V. When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.5V.
5. RD-/+ : These are the differential receiver outputs. They are AC coupled 100 Ω differential lines which should be terminated with 100 Ω (differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 350 and 850 mV differential (175 – 425 mV single ended) when properly terminated.
6. TD-/+ : These are the differential transmitter inputs. They are AC-coupled, differential lines with 100 Ω differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board. The inputs will accept differential swings of 180 – 700 mV (90 – 350 mV single-ended).
7. Latching Type - The input is used to control the optical switchmode for OSW
 - ◆ Normal mode:
 - OSW N1: > 3.75V and OSW B1/B2 < 0.5V and over 20ms.
 - ◆ Bypass mode:
 - OSW N1: < 0.5V and OSW B1/B2 >3.75V and over 20ms
8. Non-Latching Type - High =Normal Mode, Low=Bypass Mode for OSW.
9. Non-Latching Type - Pin 43, 44, 82 and 83: Ground

Notes:

1. Internally AC coupled and terminated to 100Ohm differential load.
2. Pull up to V_{cc} on Host Board.
3. Internally AC coupled, but requires a 100Ohm differential termination at or internal to Serializer/Deserializer.

Notes:

- Receiver Sensitivity is informative. Stressed receiver sensitivity shall be measured with conformance test signal for BER 1×10^{-12} .
- Vertical eye closure penalty and stressed eye jitter are the test conditions for measuring stressed receiver sensitivity. They are not the required characteristic of the receiver.

ESD

This transceiver is specified as ESD threshold 2kV for all electrical input pins, tested per MIL-STD-883, Method 3015.4 /JESD22-A114-A (HBM). However, normal ESD precautions are still required during the handling of this module. This transceiver is shipped in ESD protective packaging. It should be removed from the packaging and handled only in an ESD protected environment.

LASER Safety

This is a Class 1 Laser Product according to IEC 60825-1:1993:+A1:1997+A2:2001. This product complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated (July 26, 2001)
