

# Clocks for NXP QorIQ and Layerscape CPUs

Selecting clocks for QorIQ designs is straightforward. Once the “Qor” clocking requirements of the NXP QorIQ processors are satisfied (SYS\_CCB clock, etc.), product selection proceeds to other required clocks, such as USB or 25M for Ethernet. Then the desired data rates, frequencies and number of SERDES links are factored into the clock selection. IDT offers both integrated and building block approaches to QorIQ timing solutions as shown in the product selector tables.
