

Non-Magnetic Trimmer Summary

Increasing magnetic resonance applications caused Voltronics to launch an active engineering effort in this field years ago, one that continues today. Due to the severe non-magnetism requirements in these industries, we use only materials that exhibit no measurable magnetism. Commercial brass and plating materials are not acceptable. Our strict traceability and testing regimes ensure this essential parameter.

Most of our trimmers are internally sealed so that they withstand immersion in flux and solvents without leaking. Most of our non-magnetic trimmers can be offered in cryogenic format to be used and tuned at temperatures as low as 4K. Many of our selection of trimmers have been developed for specific customer needs.

Voltronics have developed a unique test setup to allow for Q and RF Voltage breakdown measurement at MRI operational frequencies. This has allowed for development of improved parts designed specifically to meet the stringent requirements of the application.

NMNT Series - Non-Magnetic PTFE Trimmer Capacitors

4kV to 10kV

Voltronics NMNT series of PTFE trimmers are designed for applications requiring greater capacitance and voltage ratings than the popular smaller trimmers but without the large size and expense of vacuum capacitors.

The NMNT Line offers:

- High voltage
- Non-rotating piston, long life and no tuning noise
- Extremely stable under shock and vibration
- Screw head does not move in and out

Proven RF performance and power handling these high performance trimmer capacitors are utilized in MRI body coils, NMR equipment and RF power transfer applications.
