

## Description

The Atmel® ATSAMB11-MR210CA is an ultra-low power Bluetooth® SMART (BLE 4.1) module with Integrated MCU, Transceiver, Modem, MAC, PA, TR Switch, and Power Management Unit (PMU). It is a standalone Cortex®-M0 applications processor with embedded Flash memory and BLE connectivity.

The qualified Bluetooth Smart protocol stack is stored in dedicated ROM, the firmware includes L2CAP service layer protocols, Security Manager, Attribute protocol (ATT), Generic Attribute Profile (GATT), and the Generic Access Profile (GAP). Additionally, application profiles such as Proximity, Thermometer, Heart Rate, Blood Pressure, and many others are supported and included in the protocol stack.

The module contains all circuitry required including a ceramic high gain antenna, 26MHz crystal, and PMU circuitry. The customer simply needs to place the module on the customer PCB design, provide power and a 32kHz Real Time Clock or crystal. All References to ATSAMB11-MR210CA, refer to the ATSAMB11-MR510CA as well.

## Features

- Complies with Bluetooth V4.1, ETSI EN 300 328 and EN 300 440 Class 2, FCC CFR47 Part 15, and ARIB STD-T66
- Bluetooth Certification
  - QD ID Controller (see declaration [D028678](#))
  - QD ID Host (see declaration [D028679](#))
- 2.4GHz transceiver and Modem
  - -95dBm/-93dBm programmable receiver sensitivity
  - -20 to +3.5dBm programmable TX output power
  - Integrated T/R switch
  - Incorporated antenna
- ARM® Cortex®-M0 32-bit processor
  - Single wire Debug (SWD) interface
  - Four-channel DMA controller
  - Brown-out detector and Power On Reset
  - Watch Dog Timer
- Memory
  - 128KB embedded RAM (96KB available for application)
  - 128KB embedded ROM
  - 256KB stacked Flash memory
- Hardware Security Accelerators
  - AES-128

- SHA-256
- Peripherals
  - 23 digital and three wakeup GPIO with 96k $\Omega$  Internal Pullup resistors, four Mixed Signal GPIO
  - 2x SPI (Master/Slave)
  - 2x I<sup>2</sup>C (Master/Slave)
  - 2x UART
  - 1x SPI Flash
  - 3-axis quadrature decoder
  - 4x Pulse Width Modulation (PWM), three General Purpose Timers, and one Wake up Timer
  - Four channel 11-bit ADC
- Clock
  - Integrated 26MHz oscillator
  - 26MHz crystal oscillator
  - Fully integrated sleep oscillator
- Ultra-low power
  - Less than 1.1 $\mu$ A sleep current (8K RAM retention and RTC running)
  - 3.2mA peak TX current (0dBm, 3.6V)
  - 5.0mA peak RX current (3.6V, -95dBm sensitivity)
- Integrated Power management
  - 2.3 - 4.2V input range for PMU
  - 2.3 - 3.6V input range for I/O (limited by Flash memory)
  - Fully integrated Buck DC-DC converter

## 1 Ordering Information

Ordering code	Package	Description
ATATSAMB11-MR210CA	22 x 15mm	Chip Antenna
ATATSAMB11-MR510CA	22 x 15mm	Chip Antenna

The ATATSAMB11-MR510CA module is identical to ATATSAMB11-MR210CA regarding the module footprint and functionality. The ATATSAMB11-MR510CA also includes the capability of hardware encryption.

## 2 Package Information

Table 2-1. ATATSAMB11-MR210/MR510 Module Information <sup>(1)</sup>

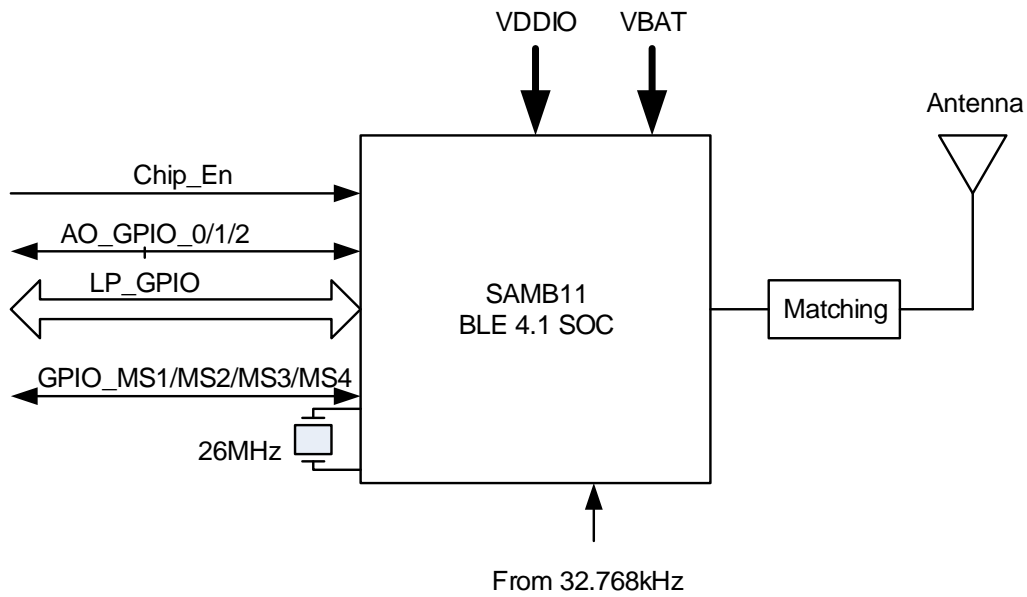

Parameter	Value	Units	Tolerance
Package Size	22.88 X 15.36	mm	
Pad Count	40		
Total Thickness	~2.1	mm	
Pad Pitch	0.9002		
Pad Width	0.500		
Exposed Pad size	4.4 x 4.4		

Note: 1. For details, see Package Drawing in Section 4.3.

### 3 Block Diagram

The following image shows the block diagram of the ATSAMB11-MR210CA/MR510 module.

Figure 3-1. Block Diagram

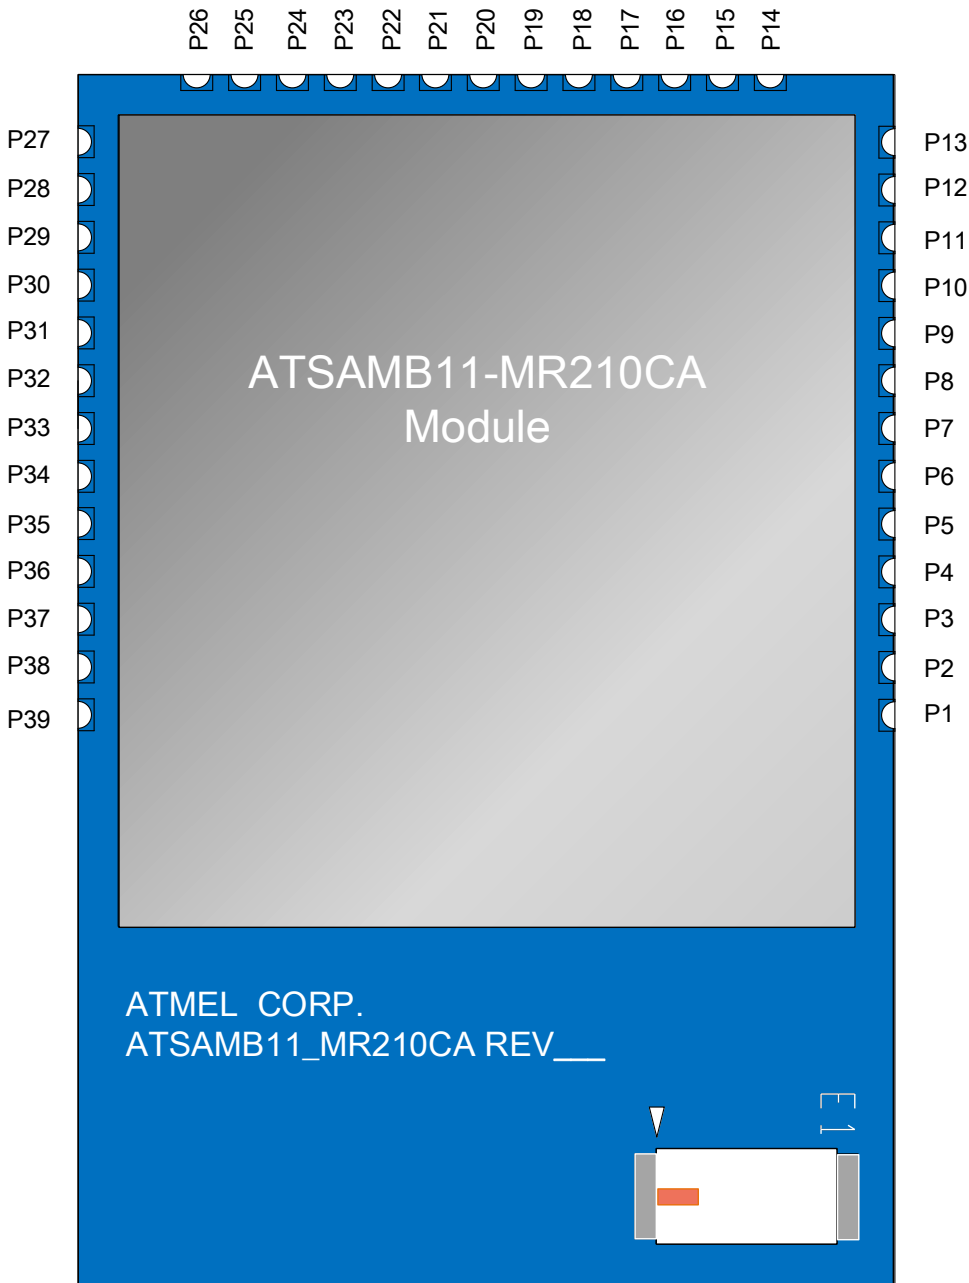

## 4 Pin Out Information

### 4.1 Pin Assignment

The following image shows the module top view and pin numbering.

Figure 4-1. ATSAMB11-MR210 Pin Assignments

## 4.2 Pin Description

Table 4-1. Pin Description

#	Name	Type	Description	Notes
1	Ground	Power	Ground Pin. Connect to PCB ground	
2	LP_GPIO_0	I/O	Used for Single Wire Debug Clock	Debug interface pin. Connect to a header or test point.
3	LP_GPIO_1	I/O	Used for Single Wire Debug Data	Debug interface pin. Connect to a header or test point.
4	VBAT	Power	Power Supply Pin for the on chip Power Management Unit (PMU). Connect to a 2.35V – 4.3V power supply.	
5	LP_GPIO_2	I/O	General Purpose I/O	Default function is Host UART RXD
6	LP_GPIO_3	I/O	General Purpose I/O	Default function is Host UART TXD
7	LP_GPIO_4	I/O	General Purpose I/O	Default function is Host UART CTS
8	LP_GPIO_22	I/O	General Purpose I/O	
9	LP_GPIO_23	I/O	General Purpose I/O	
10	LP_GPIO_5	I/O	General Purpose I/O	Default function is Host UART RTS
11	LP_GPIO_6	I/O	General Purpose I/O	Default function is Debug UART RXD
12	LP_GPIO_7	I/O	General Purpose I/O	Default function is Debug UART TXD
13	LP_GPIO_8	I/O	General Purpose I/O	Default function is I2C_SDA
14	Ground	Power	Ground Pin. Connect to PCB ground.	
15	LP_GPIO_9	I/O	General Purpose I/O	Default function is I2C_SCL
16	LP_GPIO_10	I/O	General Purpose I/O	Default function is SPI_SCK
17	LP_GPIO_11	I/O	General Purpose I/O	Default function is SPI_MOSI
18	LP_GPIO_12	I/O	General Purpose I/O	Default function is SPI_SSN
19	LP_GPIO_13	I/O	General Purpose I/O	Default function is SPI_MISO
20	GPIO_MS1	I/O	Mixed Signal I/O	Configurable to be a GPIO or ADC input
21	GPIO_MS2	I/O	Mixed Signal I/O	Configurable to be a GPIO or ADC input
22	Chip_En	Control	Chip Enable. A high level turns on the On Chip PMU and enables operation of the device. Low disables the device and turns off the PMU.	Control this pin with a host GPIO. If not used, tie to VDDIO.
23	GPIO_MS3	I/O	Mixed Signal I/O	Configurable to be a GPIO or ADC input
24	GPIO_MS4	I/O	Mixed Signal I/O	Configurable to be a GPIO or ADC input
25	RTC_CLKP		Positive Pin for Real Time Clock Crystal	Connect to a 32kHz Crystal
26	Ground	Power	Ground Pin. Connect to PCB ground.	
27	RTC_CLKN		Negative Pin for Real Time Clock Crystal	Connect to a 32kHz Crystal
28	AO_GPIO_0	I/O	Always on GPIO_0. Can be used to wake up the device from sleep. Can also be used as a general purpose I/O.	
29	AO_GPIO_1	I/O	Always on GPIO_0. Can be used to wake up the device from sleep. Can also be used as a general purpose I/O.	

#	Name	Type	Description	Notes
30	AO_GPIO_2	I/O	Always on GPIO_0. Can be used to wake up the device from sleep. Can also be used as a general purpose I/O.	
31	LP_GPIO_14	I/O	General Purpose I/O	Default function is Debug I2C_SDA
32	VDDIO	Power	Power Supply Pin for the I/O pins. Connect to a 2.3V – 3.6V power supply.	I/O supply can be less than or equal to VBAT
33	LP_GPIO_15	I/O	General Purpose I/O	Default function is Debug I2C_SCL
34	LP_GPIO_16	I/O	General Purpose I/O	
35	LP_GPIO_17	I/O	General Purpose I/O	
36	LP_GPIO_18	I/O	General Purpose I/O	
37	LP_GPIO_19	I/O	General Purpose I/O	
38	LP_GPIO_20	I/O	General Purpose I/O	
39	Ground	Power	Ground Pin. Connect to PCB ground.	
40	Paddle	Power	Center Ground Paddle	Connect to inner PCB ground plane with an array of vias

### 4.3 Module Outline Drawing

The following figure shows the bottom view of the module and the module dimensions. All dimensions are in millimeters.

Figure 4-2. ATSAM B11-MR210CA Module Dimensions (millimeters)

Figure 4-3. ATSAM B11-MR210CA Customer PCB Footprint

## 5 Electrical Specifications

### 5.1 Absolute Maximum Ratings

The values listed in this section are ratings that can be peaked by the device, but not sustained without causing irreparable damage to the device.

**Table 5-1. ATSAMB11-MR210CA Absolute Maximum Ratings**

Symbol	Characteristic	Min.	Max.	Unit
VDDIO	I/O Supply Voltage	-0.3	4.2	V
VBAT	Battery Supply Voltage	-0.3	5.0	
V <sub>IN</sub> <sup>(1)</sup>	Digital Input Voltage	-0.3	VDDIO	
V <sub>AIN</sub> <sup>(2)</sup>	Analog Input Voltage	-0.3	1.5	
V <sub>ESDHBM</sub> <sup>(3)</sup>	ESD Human Body Model	-1000, -2000(see notes below)	+1000, +2000(see notes below)	
T <sub>A</sub>	Storage Temperature	-65	150	°C
	Junction Temperature		125	

- Note:
- V<sub>IN</sub> corresponds to all the digital pins.
  - V<sub>AIN</sub> corresponds to the following analog pins: RFIO.
  - For V<sub>ESDHBM</sub>, each pin is classified as Class 1, or Class 2, or both:
    - The Class 1 pins include all the pins (both analog and digital)
    - The Class 2 pins include all digital pins only
    - V<sub>ESDHBM</sub> is ±1kV for Class1 pins. V<sub>ESDHBM</sub> is ±2kV for Class2 pins

### 5.2 Recommended Operating Conditions

**Table 5-2. ATSAMB11-MR210CA Recommended Operating Conditions**

Symbol	Characteristic	Min.	Typ.	Max.	Units
VDDIO	I/O Supply Voltage Low Range	2.3	3.3	3.6	V
VBAT	Battery Supply Voltage <sup>(1)</sup>	2.3	3.6	4.3	
	Operating Temperature	-40		85	°C

- Note:
- VBAT supply must be greater than or equal to VDDIO.

### 5.3 Restrictions for the Power States

When VDDIO is off (either disconnected or at ground potential), a voltage must not be applied to the device pins. This is because each pin contains an ESD diode from the pin to the VDDIO supply. This diode will turn on when a voltage higher than one diode-drop is supplied to the pin. This, in turn, will try to power up the part through the VDDIO supply.

If a voltage must be applied to the signal pads while the chip is in a low power state, the VDDIO supply must be on.

Similarly, to prevent the pin-to-ground diode from turning on, do not apply a voltage that is more than 0.3V below ground to any pin.

## 5.4 Power-up Sequence

The power-up/down sequence for ATSAMB1-MR210A is shown in [Figure 5-1](#). The timing parameters are provided in [Table 5-3](#).

**Figure 5-1. Power-up Sequence**

**Table 5-3. Power-Up Sequence Timing**

Parameter	Min.	Max.	Units	Description	Notes
$t_{BIO}$	0		ms	VBAT rise to VDDIO rise	VBAT and VDDIO can rise simultaneously or can be tied together
$t_{IOCE}$	0			VDDIO rise to CHIP_EN rise	CHIP_EN must not rise before VDDIO. CHIP_EN must be driven high or low, not left floating

## 5.5 RTC Pins

Module pins 25 and 27 (RTC\_CLKP and RTC\_CLKN, respectively) are used for a 32.768kHz crystal. To be compliant with the BLE specifications for connection events, the frequency accuracy of this clock has to be within  $\pm 500$ ppm. Because of the high accuracy of the 32.768kHz crystal oscillator clock ( $\pm 25$ ppm), the power consumption can be minimized by leaving radio circuits in low power sleep mode for as long as possible until they need to wake up for the next connection timed event.

The block diagram in [Figure 5-2\(a\)](#) shows how the internal low-frequency Crystal Oscillator (XO) is connected to the external crystal.

Typically, the crystal should be chosen to have a load capacitance of 7pF to minimize the oscillator current. The ATSAMB11-MR210CA device has switchable on chip capacitance that can be used to adjust the total load the crystal sees to meet its load capacitance specification. Refer to the ATSAMB11-2100A datasheet for more information.

Alternatively, if an external 32.768kHz clock is available, it can be used to drive the RTC\_CLKP pin instead of using a crystal. The XO has 5.625F internal capacitance on the RTC\_CLKP pin. To bypass the crystal oscillator an external signal capable of driving 5.625pF can be applied to the RTC\_CLK\_P terminal as shown in [Figure 5-2\(b\)](#). This signal must be 1.2V maximum. RTC\_CLK\_N must be left unconnected when driving an external source into RTC\_CLK\_P.

Figure 5-2. ATSAMB11-MR210CA XO Connections to Low-Frequency Crystal Oscillator

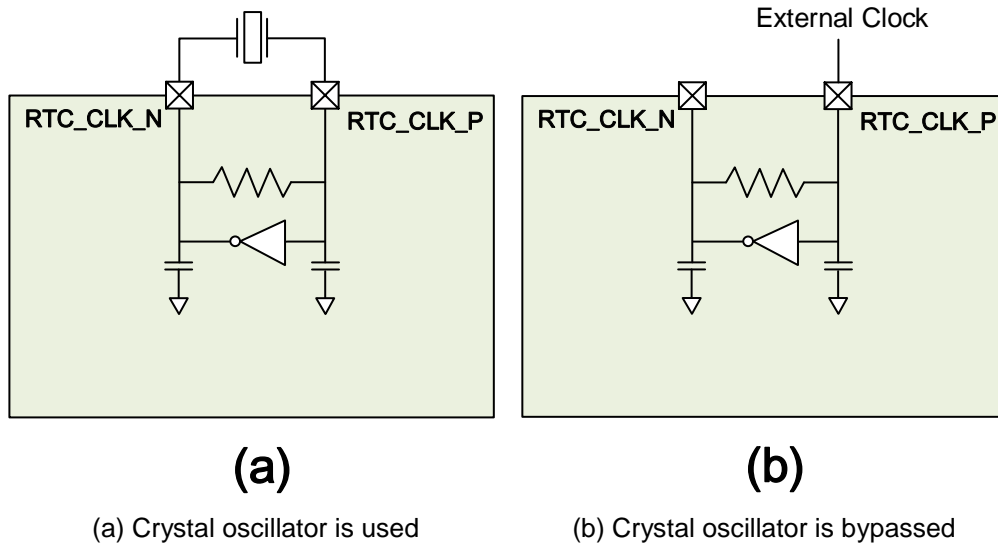

Table 5-4. ATSAMB11-MR210CA 32.768kHz External Clock Specification

Parameter	Min.	Typ.	Max.	Unit.	Comments
Oscillation frequency		32.768		kHz	Must be able to drive 6pF load @ desired frequency
VinH	0.7		1.2	V	High level input voltage
VinL	0		0.2	V	Low level input voltage
Stability – Temperature	-500		+500	ppm	

## 6 Characteristics

### 6.1 Device States

Table 6-1. ATSAMB11-MR210CA Device States

Device State	CHIP_EN	VDDIO	I <sub>VBAT</sub> (typical)	I <sub>VDDIO</sub> (typical)	Remark
Power_Down	GND	On	<0.05μA	<0.05μA	Chip Enable Off
Ultra Low Power	On	On	1.25μA	0.1μA	With 8KB retention memory, BLE Timer and RTC enabled
BLE_On_Receive@-94dBm	On	On	4.5mA	12μA	VBAT = 3.6V
BLE_On_Transmit, 0dBm output power	On	On	3.0mA	12μA	VBAT = 3.6V
BLE_On_Transmit, 3.5 dBm output power	On	On	4.0mA	12μA	VBAT = 3.6V

## 6.2 Receiver Performance

Table 6-2. ATSAMB11-MR210CA Receiver Performance

Parameter	Unit	Min.	Typ. <sup>(1)</sup>	Max.
Frequency	MHz	2,402	-	2,480
Sensitivity with on-chip DC/DC	dBm	-94.5	-95	
Maximum Receive Signal Level	dBm		5	
CCI	dB		13	
ACI (N±1)	dB		0	
N+2 Blocker (Image)	dB		-20	
N-2 Blocker	dB		-38	
N+3 Blocker (Adj. Image)	dB		-35	
N-3 Blocker	dB		-43	
N±4 or greater	dB		-45	
Intermod (N+3, N+6)	dBm		-33	
OOB (2GHz<f<2.399GHz)	dBm	-15		
OOB (f<2GHz)	dBm	-10		
RX peak current draw <sup>(2)</sup>			4.00 <sup>(2)</sup>	

- Notes: 1. Expected values for production silicon.  
 2. At -93dBm sensitivity setting. Add 0.2mA at 3.6V for best sensitivity setting.

All measurements performed at 3.6V VBAT and 25°C, with tests following Bluetooth V4.1 standard tests.

## 6.3 Transmitter Performance

Table 6-3. ATSAMB11-MR210CA Transmitter Performance

Parameter	Unit	Min.	Typ.	Max.
Frequency	MHz	2,402		2,480
Output Power Range	dBm	-20		3.5
In-band Spurious (N±2)	dBm		-40	
In-band Spurious (N±3)	dBm		-50	
2 <sup>nd</sup> Harmonic Pout	dBm	-41		
Frequency Dev	kHz		±250	

All measurements performed at 3.6V VBAT and 25°C, with tests following Bluetooth V4.1 standard tests.

Average advertising current for connectable beacon with a full payload (37-byte packet) is targeted to be 9.7µA. The average advertising current is based on automatic advertising from the ROM with RTC 32kHz, BLE sleep timers, and 8KB memory retention. IDRAM1 and IDRAM2 are OFF. External Peripherals and debug clocks are turned OFF. VBAT is set to 3.6V. This advertising current will be enabled in a future SDK release. For current SDK based advertising current, see errata Chapter 12.

## 7 Application Schematic

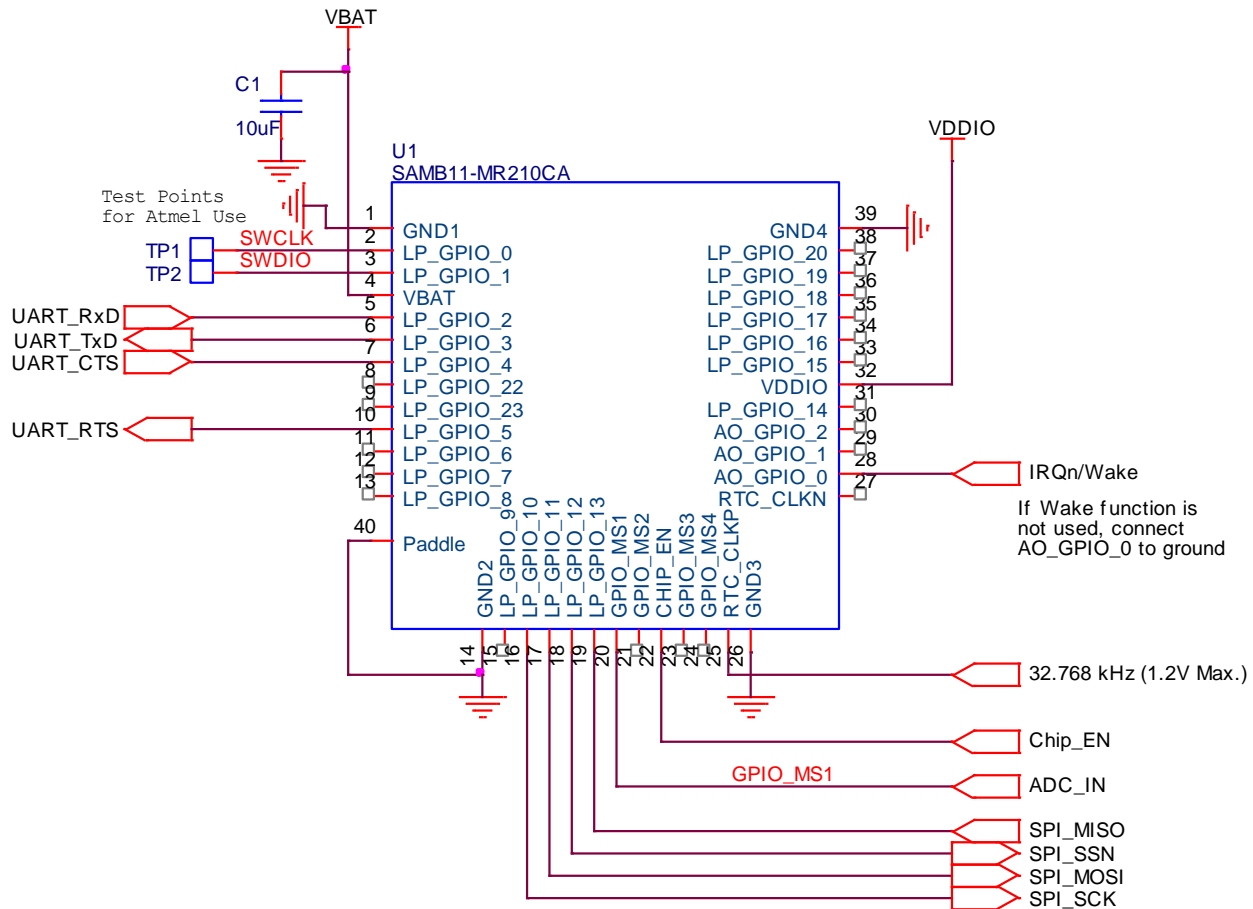

The ATSAMB11-MR210/MR510CA modules are fully self-contained. To use the module, just provide VBAT and VDDIO supplies. Figure 7-1 and Figure 7-2 shows a typical design using the ATSAMB11-MR210/MR510CA modules. The schematic shows several host interfaces: UART, I<sup>2</sup>C, and SPI as well as an input to the ADC on the GPIO\_MS1 pin. A user can choose the interface(s) required for their application. If a 32.768kHz Real Time Clock is not available in the system, a 32.768kHz crystal can be used. Section 7.2 shows a design using a crystal for the Real Time Clock. The crystal should be specified with a load capacitance,  $C_L=7\text{pF}$  and a total frequency error of 200ppm. Table 7-1 shows the BOM for the application schematics.

Note: The UART RTS and UART CTS are used for hardware flow control; they MUST be connected to the host MCU UART and enabled for the UART interface to be functional.

Module design information such as module schematics can be obtained under an NDA from Atmel.

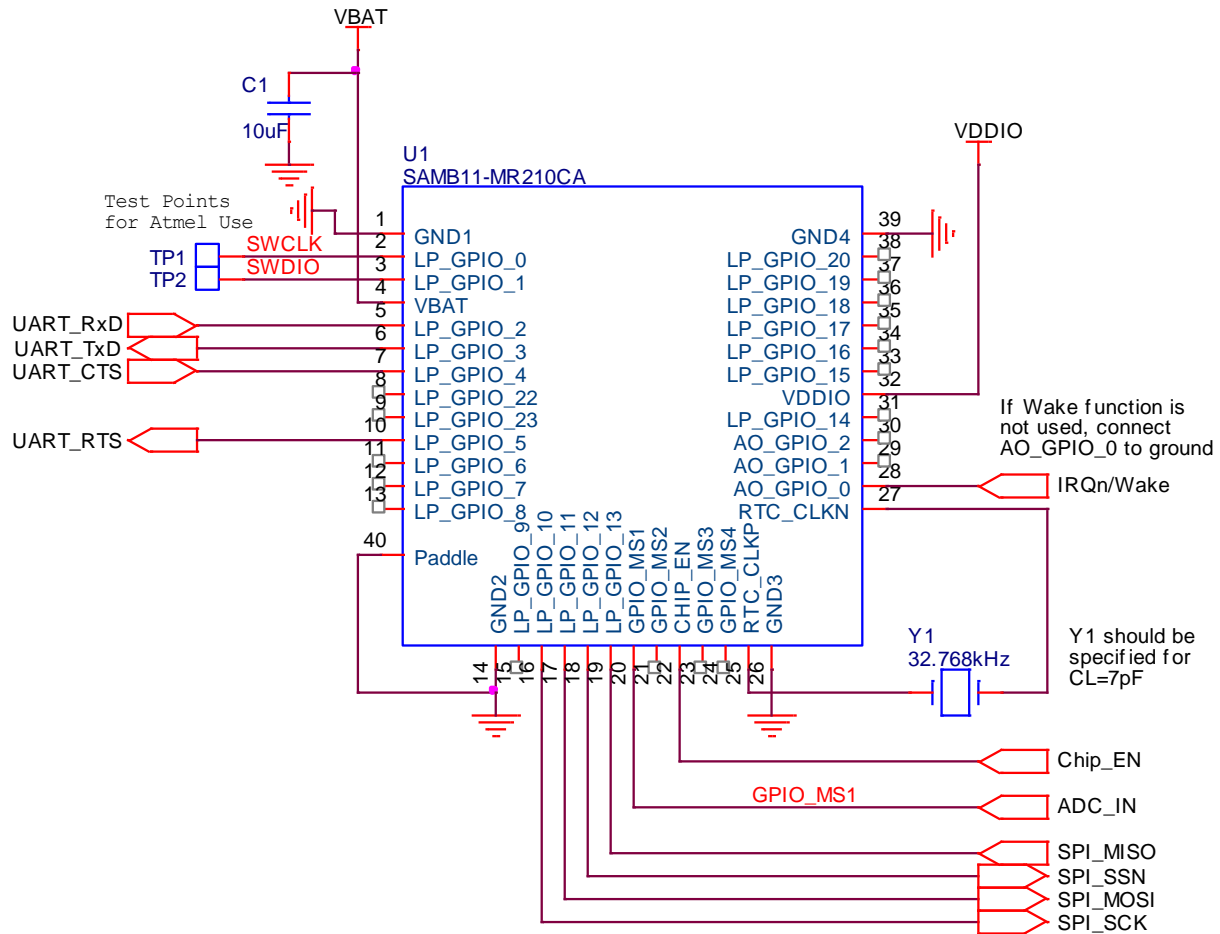

### 7.1 Application Schematic

Figure 7-1. Application Schematic

## 7.2 Applications Schematic with 32.768kHz Crystal

Figure 7-2. Application Schematic with 32.768kHz Crystal

## 7.3 Application Schematic BOM

Table 7-1. Application Schematic BOM

Item	Qty.	Ref.	Value	Description	Manufacturer	Part #
1	1	C1	10 $\mu$ F	CAP,CER,10 $\mu$ F,20%,X5R,0603,6.3V	Panasonic	ECI-1VB01106M
2	2	TP1, TP2		Test point		
3	1	U1	ATSAMB11-MR210CA	Module, BLE, ATSAMB11	Atmel	ATSAMB11-MR210CA
4	1	Y1	32.768kHz	XTAL, 32.768kHz, $\pm$ 20ppm, -40 to +85°C, CL=7pF, 2 lead, SM	ECS	ECS-.327-7-34B-TR

## 8 Placement and Routing Guidelines

It is critical to follow the recommendations listed below to achieve the best RF performance:

1. The board should have a solid ground plane. The center ground pad of the device must be soldered to the ground plane by using a 3 x 3 grid of vias (see [Figure 4-2](#)). Each ground pin of the ATSAMB11-MR210CA should have a ground via placed either in the pad or right next to the pad going down to the ground plane.
2. When the module is placed on the customer PCB design, a provision for the antenna must be made. There should be nothing under the portion of the module, which contains the antenna. This means the antenna should not be placed directly on top of the customer PCB as shown in [Figure 8-1\(a\)](#). This can be accomplished by, for example, placing the module at the edge of the board such that the module edge with the antenna extends beyond the customer PCB edge by 6.5mm as shown in [Figure 8-1 \(b\)](#). Alternatively, a cutout in the customer PCB can be provided under the antenna. The cutout should be at least 22mm x 6.5mm (see [Figure 8-1 \(c\)](#) and [Figure 8-2](#)). If the cutout method is used, the SAMB11-MR210CA should be centered in the cutout. The SAMB11-MR210CA must have ground vias spaced 2.5mm apart that should be placed all around the perimeter of the cutout. No large components should be placed near the antenna.
3. Keep away from antenna, as far as possible, large metal objects to avoid electromagnetic field blocking
4. Do not enclose the antenna within a metal shield
5. Keep any components that may radiate noise or signals within the 2.4GHz – 2.5GHz frequency band far away from the antenna or better yet, shield the components that are generating the noise. Any noise radiated from the customer PCB in this frequency band will degrade the sensitivity of the SAMB11-MR210CA module.

**Figure 8-1. SAMB11-MR210CA Placement Reference**

Figure 8-2. No PCB/GND Cut Out Area

## 8.1 Power and Ground

Dedicate one layer as a ground plane. Make sure that this ground plane does not get broken up by routes. Power can route on all layers except the ground layer. Power supply routes should be heavy copper fill planes to ensure the lowest possible inductance. The power pins of the module should have a via directly to the power plane as close to the pin as possible. Decoupling capacitors should have a via right next to the capacitor pin and this via should go directly down to the power plane – that is to say, the capacitor should not route to the power plane through a long trace. The ground side of the decoupling capacitor should have a via right next to the pad which goes directly down to the ground plane. Each decoupling capacitor should have its own via directly to the ground plane and directly to the power plane right next to the pad. The decoupling capacitors should be placed as close to the pin that it is filtering as possible.

## 8.2 Interferers

One of the biggest problems with RF receivers is poor performance due to interferers on the board radiating noise into the antenna or coupling into the RF traces going to input LNA. Care must be taken to make sure that there is no noisy circuitry placed anywhere near the antenna or the RF traces. All noise generating circuits should also be shielded so they do not radiate noise that is picked up by the antenna. Also, make sure that no traces route underneath the RF portion of the SAMB11-MR210CA. Also, make sure that no traces route underneath any of the RF traces from the antenna to the SAMB11-MR210CA input. This applies to all layers. Even if there is a ground plane on a layer between the RF route and another signal, the ground return current will flow on the ground plane and be coupled into the RF traces.

## 9 Reflow Profile Information

This section provides guidelines for reflow processes in getting the Atmel module soldered to the customer's design.

### 9.1 Storage Conditions

#### 9.1.1 Moisture Barrier Bag Before Opened

A moisture barrier bag must be stored in a temperature of less than 30°C with humidity under 85% RH.

The calculated shelf life for the dry-packed product shall be 12 months from the date the bag is sealed.

#### 9.1.2 Moisture Barrier Bag Open

Humidity indicator cards must be blue, <30%.

### 9.2 Stencil Design

The recommended stencil is laser-cut, stainless-steel type with a thickness of 100µm to 130µm and approximately a 1:1 ratio of stencil opening to pad dimension. To improve paste release, a positive taper with bottom opening 25µm larger than the top can be utilized. Local manufacturing experience may find other combinations of stencil thickness and aperture size to get good results.

### 9.3 Baking Conditions

This module is rated at MSL level 3. After sealed bag is opened, no baking is required within 168 hours so long as the devices are held at ≤30°C/60% RH or stored at <10% RH.

The module will require baking before mounting if:

- The sealed bag has been open for >168 hours
- Humidity Indicator Card reads >10%
- SIPs need to be baked for 8 hours at 125°C

### 9.4 Soldering and Reflow Condition

#### 9.4.1 Reflow Oven

It is strongly recommended that a reflow oven equipped with more heating zones and Nitrogen atmosphere be used for lead-free assembly. Nitrogen atmosphere has shown to improve the wet-ability and reduce temperature gradient across the board. It can also enhance the appearance of the solder joints by reducing the effects of oxidation.

The following items should also be observed in the reflow process:

1. Some recommended pastes include:
  - NC-SMQ® 230 flux and Indalloy® 241 solder paste made up of 95.5 Sn/3.8 Ag/0.7 Cu
  - SENJU N705-GRN3360-K2-V Type 3, no clean paste.
2. Allowable reflow soldering iterations:
  - Three times based on the following reflow soldering profile (as shown in [Figure 9-1](#)).
3. Temperature profile:
  - Reflow soldering shall be done according to the following temperature profile (as shown in [Figure 9-1](#)).
  - Peak temperature: 250°C.

Figure 9-1. Solder Reflow Profile

## 9.5 Module Assembly Considerations

The ATSAMB11-MR210 and ATSAMB11-MR510 modules are assembled with an EMI Shield to ensure compliance with EMI emission and immunity rules. The EMI shield is made of a tin-plated steel (SPTE) and is not hermetically sealed. Solutions like IPA and similar solvents can be used to clean the ATSAMB11-MR210 or ATSAMB11-MR510. However, cleaning solutions, which contain acid, should never be used on the module.

The ATSAMB11-MR210 and ATSAMB11-MR510 modules are manufactured without any conformal coating applied. It is the customer's responsibility if a conformal coating is specified and applied to the ATSAMB11-MR210 or ATSAMB11-MR510 module.

## 10 Reference Documentation and Support

### 10.1 Reference Documents

Atmel offers a set of collateral documentation to ease integration and device ramp. The following table list documents available on Atmel website or integrated into development tools.

**Table 10-1. Reference Documents**

Title	Content
Datasheet	This document
ATSAMB11 SOC Datasheet	Data sheet for the ATSAMB11 SOC contained on this module.
Ultra Low Power BLE 4.1 SoC - Hardware Design Guidelines	ATSAMB11 hardware design guide with references for placement and routing, external RTC, restrictions on power states, type of information.
ATBTLC1000 BluSDK Release Package	This package contains the software development kit and all the necessary documentation including getting started guides for interacting with different hardware devices, device drivers and API call references.

For a complete listing of development support tools and documentation, visit <http://www.atmel.com/>, or contact the nearest Atmel field representative.

# 11 Certifications

## 11.1 Agency Compliance

The ATATSAMB11-MR210CA has been tested and certified to meet the compliance for the following agencies:

- Bluetooth 4.1 – The ATSAMB11-MR210 utilizes the ATBTLC1000 Bluetooth die for Bluetooth operation. Refer to these QD ID reference numbers for Bluetooth certifications.
  - QD ID Controller (see declaration [D028678](#))
  - QD ID Host: (see declaration [D028679](#))
- FCC
  - FCC ID: [2ADHKSAMB11](#)

## 12 Errata

**Issue:** In the ATSAMB11 Datasheet, the measured advertisement current for the cases listed in [Table 6-3](#) will be higher than what is reported.

SDK5.0 does not resemble the same conditions where [Table 6-3](#) has been measured.

For example:

- The power and timing parameters in the SDK5.0 release have not been fully optimized to their final values
- IDRAM1 and IDRAM2 are always enabled/retained for ROM patches and application development
- SDK5.0 enables clocks to different peripheral blocks to allow easier application development
- Continuous access to the SWD debug interface is needed. Therefore, debug clocks cannot be turned OFF.

A small sample measurement has been performed they show the following results:

Measurement condition:

- 1-sec advertising interval
- 37 byte advertising payload
- Connectable beacon
- Advertising on 3 channels (37,38,39)
- VBAT and VDDIO are set to 3.3V

Average advertising current: 13.65 $\mu$ A

Average sleep current between beacons: 2.00 $\mu$ A

With VBAT set to 3.6V, the average advertising current under the same conditions is 12.67 $\mu$ A.

## 13 Document Revision History

Doc Rev.	Date	Comments
42498D	09/2016	<ol style="list-style-type: none"> <li>1. Revised <a href="#">Figure 4-1</a> ATSAMB11-MR210CA Pinouts.</li> <li>2. Revised <a href="#">Figure 4-2</a> POD drawing.</li> <li>3. Updated RTC drawings in <a href="#">Figure 5-2</a>.</li> <li>4. Corrected KHz to kHz.</li> <li>5. Updated VDDIO current values in <a href="#">Table 6-1</a>.</li> <li>6. Revised recommended operating conditions voltage levels in <a href="#">Table 5-2</a>.</li> <li>7. For consistency, corrected the reference name to be ATSAMB11-MR210CA.</li> <li>8. Added module placement and keep out drawings in <a href="#">Figure 8-1</a> and <a href="#">Figure 8-2</a>.</li> <li>9. Revised Maximum Ratings in <a href="#">Table 5-1</a>.</li> <li>10. Revised PPM ratings in <a href="#">Table 5-4</a>.</li> <li>11. Removed TELECOM from the certifications.</li> <li>12. Updated FCCID in section <a href="#">11.1</a>.</li> <li>13. Revised Feature numbers.</li> <li>14. Added text to Absolute Max Ratings in section <a href="#">5.1</a> to clarify.</li> <li>15. Updated the Features, Integrated Power Management section</li> <li>16. Added section <a href="#">9.5</a> for Module Assembly considerations.</li> <li>17. Revised document reference in section <a href="#">10</a>.</li> <li>18. Added clearer reflow profile picture in <a href="#">Figure 9-1</a>.</li> <li>19. Corrected Footprint drawing in <a href="#">Figure 4-3</a>.</li> <li>20. Minor edits.</li> </ol>
42498C	02/2016	<p>Some minor corrections in text and layout.</p> <ol style="list-style-type: none"> <li>1. Added text referring to ATSAMB11-MR510CA devices.</li> <li>2. Updated Module drawing in <a href="#">Figure 4-2</a>.</li> <li>3. Updated schematic information in <a href="#">Section 7</a> and added revised Application schematic figures to <a href="#">Figure 7-1</a> and <a href="#">Figure 7-2</a>.</li> <li>4. Revised Reflow Profile <a href="#">Section 8</a>.</li> </ol>
42498B	02/2016	<ol style="list-style-type: none"> <li>1. Changed pins in <a href="#">Table 4-1</a> to add UART flow control.</li> <li>2. Added UART flow control requirement in <a href="#">Chapter 7</a>.</li> <li>3. Updated Application Schematics in <a href="#">Chapter 7</a>.</li> <li>4. Added Agency certifications in <a href="#">Chapter 11</a>.</li> <li>5. Added full module drawing in <a href="#">Figure 4-2</a>.</li> <li>6. Revised <a href="#">Table 6-1</a> to remove footnote that is no longer applicable.</li> <li>7. Added application Schematic BOM in <a href="#">Table 7-1</a>.</li> <li>8. Clearer reference schematic for ATSAMB11-MR210 in <a href="#">Figure 7.1</a>.</li> <li>9. Clearer BOM for ATSAMB11-MR210 in <a href="#">Figure 7-2</a>.</li> <li>10. Added reference schematic in <a href="#">Figure 7-3</a>.</li> <li>11. Added BOM for ATSAMB11-MR510 in <a href="#">Figure 7-4</a>.</li> <li>12. Added comment to <a href="#">Table 6-3</a>.</li> <li>13. Added Errata (<a href="#">Chapter 12</a>).</li> </ol>
