Amphenol®

The Company

Amphenol Corporation is one of the largest manufacturers of interconnect products in the world. The company designs, manufactures and markets RF/microwave connectors; flat ribbon cable and interconnect systems; CATV cable and connectors; electronic connectors; and fiber-optic connectors. The primary end markets for Amphenol products are communications and information processing, including cable television, cellular telephone, data communications and instrumentation; aerospace and military electronics; automotive, rail and other transportation; and industrial applications.

Amphenol Corporation is a world leader in providing integrated interconnect solutions to the telecommunications industry. Recognized worldwide as a technology leader in the wireless market, Amphenol offers a full complement of RF coaxial products from MMCX connectors used on cellular subscriber units to low intermodulation 7/16 DIN connectors used on cellular base stations. Today, Amphenol is a major player in this global arena; a position founded on the combined strengths

of a broad product line and a leadership role in product innovation.

As the information super highway expands, the demand for interconnect solutions continues to grow into new and exciting areas. Amphenol is a leading producer of broadband coaxial cable, connectors and fiber optic interconnect components. Amphenol is uniquely capable of supplying the complete Hybrid Fiber/Coaxial (HFC) interconnect systems which form the backbone of the information super highway. As a result, every household, business, private and government institution is a potential customer and will depend on Amphenol's commitment to quality and product innovation.

In the area of computers and electronic data interchange, Amphenol continues to concentrate on the fastest growing segments; such as cable assemblies and line terminators which bring reliable, miniaturized solutions to LANS and other interactive communications networks, to high density connectors utilized in next generation global telecommunications switching systems.

Amphenol's ability to provide fully integrated solutions even extends into the arena of smart card technology, where microchips and sophisticated chip card acceptor devices are being combined for a growing number of applications from banking, to security, to medicine, to voice recognition systems.

Maintaining this position as a leader in the field of communications requires close interaction with a worldwide customer base through international management teams, distributed manufacturing, global quality assurance programs and sophisticated distribution networks. By remaining totally committed to the customer, Amphenol provides the very highest levels of quality and responsive service, anywhere in the world.

Did You Know?

UHF - Invented in the 1930's by an Amphenol engineer, E. Clark Quackenbush, for use in the radio industry.

N - Was the first coaxial connector capable of microwave performance and was invented by and named for Paul Neill of Bell Labs.

C - Invented by and named for Amphenol engineer Carl Concelman. Type C has quick connect/disconnect bayonet coupling features.

BNC - A miniature version of the Type C. The name stands for **B**ayonet **N**eill **C**oncelman.

TNC - The name stands for **T**hreaded **N**eill **C**oncelman. This series features screw threads for mating.

APC™ - Invented by Amphenol and Hewlett-Packard engineers. The name is an acronym for **A**mphenol **P**recision **C**onnectors.

Amphenol RF Division

Amphenol is the world's largest manufacturer of RF connectors with experience extending over half a century. Our complete range of RF interconnect products are used in the cellular/PCS, telecommunications, computer networking and instrumentation industries. These include Standard/ Miniature connectors (UHF, Mini-UHF, N, 50 & 75 ohm BNC, and RP-BNC, Twinaxial, DIN 1.6/5.6, TNC and RP-TNC); Subminiature connectors (SMA and RP-SMA, SMB, SMC, DIN 1.0/2.3, and size 8 contacts); MicroMate™ Microminiature connectors; DIN 7116 and corrugated cable connectors. Amphenol offers a full line of semiflex and drop cable connectors to meet the demanding requirements of HFC broadband infrastructure being developed by CATV MSOs and telephone companies worldwide.

Commitment to Customer Service

For over 60 years, leading manufacturers of communications, consumer, industrial and aerospace products have relied on Amphenol to provide total interconnect solutions.

Maintaining this high level of customer trust requires a total concern for complete customer satisfaction at all levels — from engineering, to manufacturing, to quality assurance. Since many products are custom designed to individual customer specifications, often for the harshest environments, it's critical that a teamwork approach be taken, involving the customer at all levels. It starts with the design engineers who listen closely to customer needs, combining solid analytic skills with the latest CAE and CAD tools to quickly solve problems.

Amphenol also employs multi-functional teams to ensure that all products are designed for manufacturability. Serving the needs of our customers also requires a strong worldwide manufacturing presence. That's why we operate advanced production and assembly facilities strategically located across three continents. Yet, our quality remains exceptionally uniform and internationally standardized, from raw materials testing, through design engineering, to automated manufacturing and sub-assembly, to fully documented and traceable test

procedures developed in accordance with customer specifications. Amphenol also employs Statistical Process Control and has obtained ISO 9000 Certification for all its production facilities worldwide. As a result, we offer precisely what every customer is looking for — world class quality at the lowest possible cost.

How to Use This Catalog

Frequency Range

The application frequency range may limit the connector choice. Refer to the inside front cover for the Frequency Range Chart.

Cable

The cable specified may limit the connector choice. Refer to pages viii and ix for cable/connector chart.

Impedance

For maximum impedance matching, the connector has the same impedance as the cable. Standard connector choices are 50 ohm or 75 ohm.

Coupling Style

The application will determine the coupling mechanism preference. Basic styles: 2-Stud Bayonet, Threaded, Snap-on, and Slide-on.

Performance Specifications

The application performance requirements may limit the connector choice. Criteria to consider: Voltage Rating, Dielectric Withstand Voltage, and Voltage Standing Wave Ratio (VSWR).

Reviewing The Connector Choices

Refer to the Connector Selector Guide on pages vi-vii for a quick overview of each product series

Locating The Connector Series

Refer to page i for product series listings. At the beginning of each product series is information pertaining to the connector mating face dimensions and typical characteristics regarding mechanical, material, environmental and performance of the connector design.

Connector P/N

The connector part number is located in the far right column, opposite the appropriate cable.

Cable

The cable listed in the first column is based on the mechanical size of military specified cable. Caution is advised when a commercial, RG Type size cable is being used since the cable dimensions may vary and result in a different size center conductor, dielectric, braiding and outer jacket of the cable. If the manufacturer's commercial cable P/N is not listed, contact Amphenol's customer service representative for the appropriate connector recommendation.

Specific Connector Information

Each connector listed has a plating code / Plt.; insulation code / Ins.; and cable assembly instruction / CAI. Refer to page 232 for the code charts.

Example:

D1 = TFE or equivalent

P1 = Nickel plated body, silver plated contact

Cable Assembly Instructions

If you already know the connector P/N and are looking for the assembly instructions, refer to the Connector Assembly Index on pages 240-241. The appropriate CAI code number is listed opposite the connector part number.

Design Considerations

Typically, the shorter the cable assembly, the more critical the connector insertion loss becomes.

Typically, the longer the cable assembly, the less critical the connector insertion loss becomes.

Typically, the higher the frequency, the more critical the connector insertion loss becomes.

Typically, the more critical the connector insertion loss, the more critical the matched impedance of the cable and the connector becomes.

Intermodulation (IM)

Intermodulation is a phenomena that occurs when two or more fundamental frequencies are present in an electronic circuit. Passive components must eliminate or minimize nonlinearities known to generate IM. Two sources which create nonlinearities are contact junctions and ferromagnetic materials. Small separation of contact surfaces can generate microscopic arcing. The use of nickel or steel can also generate IM due to nonlinear voltage to current ratio.

MMCX

Amphenol's MicroMate™ MMCX connector line is a family of products designed as the next generation 50 ohm microminiature surface mount coaxial interconnection system. Providing a more robust interface for greater durability, this series is ideal for high volume wireless SMT or PCMCIA applications in cellular base stations, cellular phones and personal communicators, global positioning systems (GPS) and wireless LAN (WLAN) applications.

MCX

To address the rapid implementation of the U.S. digital cellular PCN infrastructure, Global Positioning Systems (GPS) and Instrumentation and Wireless LAN Systems, Amphenol has optimized its MCX product offering to target these high growth market applications.

The growth rate of these emerging markets has fueled an increasing demand for subminiature coaxial connectors with very good electrical performance to 6 GHz.

1.0/2.3

The 1.0/2.3 series of coaxial connectors are designed for telecommunication systems requiring a subminiature 50 ohm slide on / screw on connector. These connectors comply with the requirements of DIN41626, DIN 47297 INFC 93569 INFC 93571 and CECC22230. The connectors perform DC through 10 GHz, and feature crimp cable termination for low installation cost.

SMB

SMB connectors feature quick connect/disconnect snap-on mating and are available in both 50 and 75 ohm impedance structures. For maximum space utilization, Amphenol also offers a high density 75 ohm version. This series of connectors conform to the requirements of MIL-C-39012 and the interface is in compliance with MIL-STD-348. Using highly efficient die cast molds and high speed fully-automated assembly equipment. Amphenol's SMB connector line offers a cost effective solution for digital cellular PCN, Global Positioning Systems (GPS) and wireless LAN systems needs.

SMA

Amphenol's 50 ohm SMA connectors are semi-precision subminiature connectors performing DC through 18 GHz. SMA connectors are primarily used where trends toward higher frequencies, miniaturization, and SMA connectors are built in accordance with MIL-C-39012 and CECC 22110/111, and are available for a variety of flexible and semi-rigid cables. Amphenol's line of brass SMA connectors provide a cost effective solution for applications where stainless steel construction is not required.

SMC

SMC connectors feature 10-32 threaded coupling with broadband performance with low reflection from DC-10 GHz. This series of connectors conforms to the requirements of MIL-C-39012 and the interface is in compliance with MIL-STD-348. These connectors are particularly suitable for use in high vibration environments.

BNC Twin

Amphenol's twin contact connectors are used in balanced line, high sensitivity circuits. These applications typically center on computer networks and equipment and process control devices. The BNC-twin connectors feature the same two-stud bayonet locking mechanism as standard coaxial BNC connectors where quick connect/disconnect is an advantage.

7/16

Amphenol's 7/16 connectors are designed for use in medium to high power communication systems. These connectors perform exceptionally well in multichannel cellular systems where power levels approximate 100 watts per channel. Designed for both flexible as well as corrugated cables, these connectors are used in a variety of cellular base station and broadcast communication applications. Amphenol's designs offer superior IMD characteristics and assembly onto corrugated cable has been greatly simplified.

Type N

Type N connectors are medium size threaded connectors for use DC through 11 GHz and feature a characteristic 50 ohm impedance structure. Applications for N connectors include base station equipment, broadcast and satellite communication systems as well as test and instrumentation equipment. Connector performance is per MIL-C-39012, with commercial grade versions available for the most popular configurations. Cable termination includes clamp styles and crimp styles, and connectors are available for the most widely used coaxial cables.

Twinax

Amphenol twin contact connectors are used in balance line, high sensitivity circuits. The keyed twinax style of connectors feature keyway polarization to insure system integrity and prevent signals from being mixed. These connectors have been primarily used on computer mainframe and peripherals and related network applications and are designed to terminate large size twinaxial cables.

TNC

Amphenol TNC connectors were originally developed for aircraft and missile application where extreme vibration is a factor. TNC connectors are of miniature size like the BNC connector but feature a threaded coupling nut for application requiring performance through 11 GHz. Chosen for their durability and reliability, TNC connectors are widely used in the cellular/mobile communication industry for equipment cabling and antenna interfaces.

1.6/5.6

The 1.6/5.6 is a miniature 75 ohm connector primarily designed for use in the telecommunication industry. The snap-on mating face allows for quick mating for test purposes, and it is also threaded to provide a durable condition when mated. Crimp/crimp cable terminations provide ease of assembly and low installation costs, and the small size allows for dense packing on equipment.

UHF

Amphenol UHF connectors are the original radio frequency connector interface. They are general purpose units which operate satisfactorily DC to 300 MHz. Applications include citizens band radio receivers, public address systems, and a variety of other low frequency system applications where cost is a prime consideration.

Mini-UHF

Mini-UHF connectors are a miniature version of the original UHF connector and feature a threaded coupling mechanism for reliable mating. The mini-UHF connector is designed for use in cellular mobile telephone systems where size, weight, and cost are critical. Featuring crimp cable termination for low installation costs, these connectors provide excellent RF performance in applications through 2.5 GHz.

Type F

Amphenol has developed a variety of board level F receptacles for use on high speed modems and CIU's. These connectors utilize Amphenol's unique female contact design featuring a true cylindrical coaxial contact. As a result, superior RF performance and excellent insertion / withdrawal characteristics are achieved. We also offer designs capable of handling up to 15 amps for future set-top box applications. F receptacles are available in multiple styles including SMD versions complimenting Amphenol's line of drop F connectors and adapters.

Type G

Amphenol has developed a range of high performance G receptacles for use in today's 1 GHz amplifier and fiber optic node equipment designs. Amphenol has also developed a series of 15 amp G receptacles for HFC networks. These connectors are designed to meet the 15 amp current capability required to power loop electronics in support of enhanced telephony services being implemented by CATV MSO's and telco's.

Reverse Polarity

Amphenol's reverse polarity connectors have been developed to meet the requirements of the FCC part 15.203 dictating the need for a non-standard interface to be used on connectors designed for spread spectrum wireless devices. Amphenol offers reverse polarity interfaces in the SMA, TNC and BNC connector line, allowing the user the greatest flexibility for cable and size constraints. Featuring all crimp terminations, these connectors feature performance consistent with the corresponding non-polarized product family.

RF MANUFACTURING LOCATIONS

United States (A1)

Danbury, CT

Date Founded: 1932

Products Manufactured: MMCX, MCX, 1.0/2.3, SMB, SMA, 1.6/5.6, BNC, TNC, Reverse Polarity, Type N, Twinaxial, UHF, Mini-UHF, 7/16, Quarter Wave Stubs, Type F, Type G, C, SC, HN, TXL and TWB cables, and Cable Assemblies

Plant Size: 177,000 Square Feet

ISO 9001

Mexico (B1)

Nogales, Sonora

Date Founded: 1985

Products Manufactured: BNC, TNC, UHF, Type C, SMA, SMC, Type F, TXL, and Cable Assemblies

Plant Size: 27,558 Square Feet

ISO 9002

Taiwan (B2)

Ren-Der Shiang, Tainan Hsien

Date Founded: 1982

Product Manufactured: MCX, SMA, SMB, BNC, TNC, N, UHF, Twinaxial, FME and Cable Assemblies

China (C2)

Schenzehn, China

Date Founded: 2000

Product Manufactured: MCX, SMA, SMB, BNC, TNC, N, UHF, Twinaxial, FME and Cable Assemblies

Plant Size: 110,000 Square Feet

Korea (D2)

Bucheon-City, Kyunggi-Do, Korea

Date Founded: 1988

Product Manufactured: Quarter Wave Stub, Type N, 7/16, and Cable Assemblies

Plant Size: 400 Square Meters

ISO 9001

Defining an RF Connector

Radio frequency (coaxial) connectors are specialized devices used to terminate and interconnect coaxial cables which carry high frequency signals.

Two Minute RF Connector Course

Terminology

RG-/U:

“Radio Guide/Universal”. Previously a government listing for coaxial cable, replaced by MIL, C-17. RG-/U remains the most common nomenclature for cables used in commercial applications.

UG-/U:

“Union Guide/Universal”. Previously a government listing RF connectors, replaced by M39012. UG numbers have become commercialized in the sense that the configurations they denote are manufactured widely, but generally they are no longer made to the original UG specifications. Amphenol has available both the original UGs and the new, commercial RFX parts.

M39012:

The principal military spec for RF connectors, it calls out electrical and other parameters that must be met. RFX™ connectors are not intended for use in M39012 applications.

Types and Styles:

Cable PLUGS have coupling rings and normally have a male pin center contact. They mate to jacks and receptacles.

Cable JACKS mate to plugs and normally have socket center contacts.

RECEPTACLES normally mate to plugs and are mounted on a panel or equipment chassis. Receptacles usually have socket contacts and normally are open wired (they don't terminate cable).

ADAPTERS are used to join two or more incompatible units, such as a plug to a plug, either in the same series or between series.

Subminiature

Amphenol's Microminiature family of connectors includes Micromate™ (**MMCX**) and **MCX**. The connectors were developed to satisfy the need for high density, light weight coaxial interconnects. Each series of connectors features individual characteristics that allow the design engineer flexibility in completion of a project.

with performance through 6 GHz, featuring a quick-connect/disconnect snap-on mating style. The product series includes: straight plugs for flexible cables, right angle plugs for flexible and semi-rigid cables and straight jacks for both flexible and semi-rigid cables as well as printed circuit board receptacles.

The Micromate™ (**MMCX**) family of products is a 50 ohm coaxial interconnect system with performance to 6 GHz. These connectors are designed for use in wireless data and telecommunications as well as instrumentation. The product series includes: surface mount jack, edge launch jack and plug, right angle and straight cable plugs, and inter-series cable assemblies. Currently, intermateability does not exist between suppliers of microminiature connectors, forcing OEMs into single source position. Amphenol's Micromate™ complies with Europe's specification CECC 22000 compatible with Huber + Suhner.

The **MCX** family of products is also a 50 ohm coaxial interconnect system

Amphenol's Subminiature family of connectors includes **SMA**, **SMB** and **1.0/2.3**. The compact design of these connectors permits dense connector packaging, making these connectors ideally suited to applications where subminiature connector types feature their own mating style and RF performance characteristics, allowing the design engineer wide flexibility of connector choice in the completion of a program.

interconnection requirements and provide good electrical performance from DC to 4 GHz.

Amphenol's **1.0/2.3** connectors are subminiature 50 ohm units available in push/pull types or a threaded coupling mechanism, which provide positive mating and high reliability. The compact design of the 1.0/2.3 permits dense packaging and provides good RF performance from DC to 10 GHz.

Amphenol's family of **SMA** connectors are a 50 ohm semi-precision coaxial interconnect system providing excellent performance from DC to 18 GHz. These high performance connectors are compact in size and feature outstanding mechanical durability and high reliability. Brass SMA connectors are available for commercial applications.

Amphenol's **SMB** connector line is a quick-connect/disconnect snap-on mating system, available in both 50 ohm and 75 ohm impedance. These connectors offer an economic solution to many "limited space"

Description

The MMCX series is also called Micromate™. It is Amphenol's smallest RF connector line and was developed in the 1990's.

MMCX is a micro-miniature connector series with a lock-snap mechanism allowing for 360 degrees rotation enabling flexibility in PCB layouts. MMCX connectors conform to the European CECC 22220 Spec.

The micromate family of products is a 6 GHz, 50 Ohm interconnect system. A range of connectors are available including surface mount, edge card, and cable connectors.

Features/Benefits

- Broadband performance with low reflection DC to 6 GHz. Low cost combined with high quality.
- Conforms to European CECC 22000 specifications. Provides customer with second source.
- Quick connect/disconnect snap-on mating reduces installation time.
- Available in many styles: Plugs (Straight and Right Angle) and Printed Circuit Board (Straight and Right Angle). Meets many customer application demands.

Application

- Antennas
- Base Stations
- Broadband Communications
- Cable Assemblies
- Components
- GPS
- Instrumentation
- PCMCIA Cards
- Radio Boards
- Satcom
- Telecom

Dimensions for Clearance and Mated Height

Pick and Place Automation

- Amphenol Surface Mount connectors can be assembled to printed circuit boards by state of the art pick and place equipment.
 - Connector pick-up by suction tip
 - Optional insertion tip (see illustration)

Application Notes

Amphenol SMT solder joints act as the mechanical bond to the printed circuit board and also functions as the point of electrical contact. With this in mind, the following points should be considered:

- Avoid forces from the cable of the mating connector to the surface mounted connector.
- For connecting and disconnecting of the surface mounted connector only non-axial forces should be applied. Non-compliance may cause excess torque and damage the solder connectors.

Recommended Mounting Patterns

Soldering

MicroMate (MMCX) product is compatible with the following soldering methods.

- Infrared Soldering (Max 260°C/500°F)
- Vapor Phase Soldering (215°C/419°F)
- Normal Eutectic Solder Paste (63% tin, 37% lead)
- If stenciled or screened in accordance with the mounting patterns above

Description

MCX connectors conform to the European CECC 22220 Spec and was introduced in the 1980's.

While the MCX uses identical inner contact and insulator dimensions as the SMB, the outer diameter of the plug is .140" which is 30% smaller than the SMB. This series provides designers with options where weight and physical space is limited.

MCX provides broadband capability though 6GHz with a snap-on connector design. A range of connectors are available including PC board and cable connectors.

Features/Benefits

- Broadband performance with low reflection DC to 6 GHz. Low cost combined with high quality.
- Quick connect/disconnect snap-on mating reduces installation time.
- Accommodates a wide range of miniature RG flexible coaxial cables including semi-rigid cable provides customer flexibility in their design and manufacturing with a durable connector.

Application

- Antenna
- Automotive
- Base Station
- Components
- GPS
- Head End Equipment
- Instrumentation
- PC/LAN
- Radios
- Telecom
- WLAN

Description

The 1.0/2.3 series is a European design introduced in the 1990's. The compact design of the 1.0/2.3 permits dense connector packing; they are ideally suited to applications where space limitation is a factor.

Versions are available with threaded coupling mechanisms which provide positive mating or with a unique push-pull coupling system which allows quick installation. The Amphenol push-pull process is patented and ensures positive locking.

Amphenol 1.0/2.3 coaxial connectors are 50 ohm units operating from 0-10 GHz. This series complies with DIN 41626, DIN 47297, and NFC 93-571 international specifications.

Features/Benefits

- Push-Pull coupling with patented locking mechanism allows quick installation; will not disconnect during trouble shooting like competitor's products.
- Push-pull offers safe coupling. Locking mechanism will not vibrate loose as threaded connectors are prone to do.
- Push-pull coupling mechanism eliminates cross-threading problems eliminates field problems.
- Push-pull connectors can be more densely packed saving panel space in components that are shrinking in size.

Application

- Base Stations
- Cable Assemblies
- Components (Filters)
- Datacom
- Routers
- Switching Equipment
- Telecom

Description

The SMB name derives from SubMiniature B (the second subminiature design). The SMB was developed in the 1960's.

SMB is a smaller version of the SMA with snap-on coupling.

Amphenol's SMB connectors conform to the requirements of MIL-C-39012 and their interface is in compliance with MIL-STD-348.

Available in 50 & 75 ohm impedance

SMB provides broadband capability through 4 GHz with a snap-on connector design and utilizes die cast components on non-critical areas to provide a low cost solution.

Features and Benefits

- Broadband performance with low reflection DC to 4 GHz provides low cost connector combined with high quality.
- Quick connect/disconnect snap-on mating reduces installation time.
- Availability in 50 Ohm, 75 Ohm & High Density 75 Ohm ensures customer a solution to specific applications.
- Various plating options: Nickel, Gold, Tin Lead. Also selective plating provides corrosion resistance finish as well as good solderability characteristics.
- SMB PCB slide-on plug and jack allows board to board mounting with a low insertion force. Ideal for mating a high number of connectors on a pair of PCBs.

Application

- Antennas
- Automotive (GPS)
- Base Stations
- Cable Assemblies
- Components
- Instrumentation
- PC/LAN
- Process Controls
- Radio Boards
- Surge Protection
- Telecom
- Test and Measurement
- Video Systems

50 ohm Coaxial Connectors

Specifications	36
Plugs	37
Jacks	38
Bulkhead Receptacles	39-40
PCB Receptacles	41-43

75 ohm Coaxial Connectors

Specifications	44
Plugs, Jacks	45
Receptacles, PCB	46

75 ohm High Density Coaxial Connectors

Specifications	47
Plugs	48
PCB Receptacles	49

ELECTRICAL

Impedance	50 ohms
Frequency range	0-4 GHz with low reflection; usable to 10.0 GHz.
Voltage rating for RG-188/U cables	Sea level: 335 volts 70,000 ft: 85 volts
Dielectric withstanding voltage	750 VRMS RG-196 type 1000 VRMS for RG-188 type
VSWR straight connectors rt. angle connectors	RG-196/U series 1.30 + .04 f (GHz) 1.45 + .06 f (GHz)
	RG-188/U series 1.25 + .04 f (GHz) 1.35 + .04 f (GHz)
Contact resistance	Center contact: initial, 6.0 milliohms; After environmental, 8.0 Outer contact: initial, 1.0 milliohms; After environmental, 1.5 Braid to body: initial, 1.0 milliohms; After environmental, N/A
Insulation resistance	1000 megohms min.
RF leakage	-55 dB min. @ 2 - 3 GHz
Insertion loss: straight connectors rt. angle connectors	0.30 dB @ 1.5 GHz
	0.60 dB @ 1.5 GHz

MECHANICAL

Mating	50 ohm snap-on coupling, per MIL-STD-348
Engagement forces	Initial 14 lbs. max. engagement. After 500 matings, 14 lbs. max engagement and disengagement. 2 lbs. min. disengagement.
Connector affixment to cable	Braid and jacket: hex crimp.
Cable affixment to center contact	Solder
Contact captivation	All types, except as noted
Cable retention	Equal to breaking strength of cable employed
Connector durability	500 mating and unmating cycles min.

ENVIRONMENTAL

Temperature range	-65°C to + 165°C
Thermal shock	MIL-STD-202 method 107 (test cond. B) except high temp test @ + 200°C
Vibration	MIL-STD-202 method 204, snap-on (test cond. B) (15G's)
Shock	MIL-STD-202 method 213, snap-on (test cond. B) 75 G's @ 6 milliseconds 1/2 sine.
Corrosion	MIL-STD-202 method 101 (test cond. B) 5% salt solution.

MATERIAL

Bodies	Brass per QQB-626 or zinc per ASTM B86-71, as specified, nickel (or gold) plated as listed
Center contacts	Female: beryllium copper, gold plated Male: brass or beryllium copper, gold plated
Outer contact	Nickel or gold plated as listed.
Crimp ferrules	Annealed copper alloy
Insulators	TFE

Amphenol standard 75 ohm SMB 903 series connectors are constructed in accordance with the requirements of MIL-C-39012 and their interface is in compliance with MIL-STD-348. These subminiature units feature positive lock mating as well as snap-on mating faces.

They are available in a variety of configurations and styles. This series has broadband performance with low reflection.

MATERIAL

Bodies	Brass per QQB-626, as specified, nickel (or gold) plated as listed
Center contacts	Female: beryllium copper, gold plated Male: brass or beryllium copper, gold plated
Outer contact	Nickel or gold plated as listed.
Crimp ferrules	Annealed copper alloy
Insulators	TFE

SPECIFICATIONS

ELECTRICAL

Impedance	75 ohms
Frequency range	0-4 GHz with low reflection; usable to 10.0 GHz.
Voltage rating for RG-188/U cables	Sea level: 335 volts 70,000 ft: 85 volts
Dielectric withstanding voltage	1,000 VRMS
RF high potential withstanding voltage	RG-195/U series 500 VRMS
Corona level	RG-195/U series 400 min. volts @ 70K ft.
VSWR straight connectors	RG-196/U series 1.30 + .04 f (GHz) RG-188/U series 1.25 + .04 f (GHz)
right angle connectors	RG-196/U series 1.45 + .06 f (GHz) RG-188/U series 1.35 + .04 f (GHz)
Contact resistance	Center contact: initial, 6.0 milliohms; After environmental, 8.0 Outer contact: initial, 1.0 milliohms; After environmental, 1.5 Braid to body: initial, 1.0 milliohms; After environmental, N/A
Insulation resistance:	1000 megohms min.
RF leakage	-55 dB min. @ 2 - 3 GHz
Insertion loss: straight	0.30 dB @ 1.5 GHz
right angle	0.60 dB @ 1.5 GHz

* These characteristics are typical and may not apply to all connectors.

This series is also called SMZ.

MECHANICAL

Mating	75 ohm snap-on coupling, per MIL-STD-348
Engagement forces	Initial 14 lbs. max. engagement. After 500 matings, 14 lbs. max engagement and disengagement. 2 lbs. min. disengagement.
Connector affixment to cable	Braid and jacket: hex crimp.
Cable affixment to center contact	Solder
Contact captivation	All types, except as noted
Cable retention	Equal to breaking strength of cable employed
Connector durability	500 mating and unmating cycles min.

ENVIRONMENTAL

Temperature range	-65°C to + 165°C
Thermal shock	MIL-STD-202 method 107 (test cond. B) except high temp test @ + 200°C
Vibration	MIL-STD-202 method 204, snap-on (test cond. B) (15G's)
Shock	MIL-STD-202 method 213, snap-on (test cond. B) 75 G's @ 6 milliseconds 1/2 sine.
Corrosion	MIL-STD-202 method 101 (test cond. B) 5% salt solution.

75 ohm High Density Coaxial Connectors

Amphenol high density 75 ohm 903 Series SMB connectors conform to the requirements of MIL-C-39012 and the interface is in compliance with MIL-STD-348.

Features/Benefits

- Broadband capability through 4 GHz combines with compact, space saving design.
- Can easily be identified by their red Teflon insulators.
- Guided entry sleeve for positive mating.
- Closed entry contact to prevent "slide-by".
- Full range of high density SMB connector configurations is available, including end launch, printed circuit board and cable connectors.
- Series gives design engineers options in applications where physical space is limited.

Description

The SMC name derives from SubMiniature C (the third subminiature design). The SMC design was developed in the 1960's. SMC has threaded coupling with 10-32 threads.

Available in 50 & 75 ohm impedance.

Utilizes die cast components on non-critical areas to provide a low cost solution.

Features/Benefits

- Broadband performance with low reflection DC to 10 GHz provides low cost connector combined with high quality.
- Conforms to the interface dimensions of MIL-STD-348 provides intermatability with other connector suppliers. Offers customer second source.
- 10-32 screw-on (threaded) coupling mechanism allows performance to 10 GHz with low reflection.
- Right Angle connectors available in one piece construction ensures better performance combined with low cost.

Application

- Antennas
- Automotive (GPS)
- Base Stations
- Cable Assemblies
- Components
- Instrumentation
- PC/LAN
- Process Controls
- Radio Boards
- Surge Protection
- Telecom
- Test and Measurement
- Video Systems

Description

SMA is an acronym for SubMiniature version A and was developed in the 1960's. It uses a threaded interface.

50 ohm SMA connectors are semi-precision, sub-miniature units which provide excellent electrical performance from DC to 18 Ghz. These high performance connectors are compact in size and mechanically have outstanding durability.

Built in accordance with MIL-C-39012 and CECC 22110/111. They can be mated with all connectors which meet these spec mating diameters regardless of manufacturer.

Features/Benefits

- Broadband performance DC to 18 GHz with low reflection stainless steel construction with 1/4-36 threaded coupling offers high performance in a compact design.
- Low cost Commercial Grade (Brass SMA) available in nickel or gold plating, flexible provides approximately 30% reduction in cost with 250 mating cycles.
- Various flexible cable groups including: .086 and .141 semi-rigid allows customer flexibility in their design with a durable connector.

Application

- Base Stations
- Cable Assemblies
- Components
- Instrumentation
- Mil/Aero
- PC/LAN
- Process Controls
- Telecom

Amphenol has available a line of 50 ohm SMA brass connectors as a cost effective solution for applications where stainless steel construction is not required. This gives the design engineer flexibility with performance to complete projects with world class components.

Amphenol series 901 SMA brass connectors are semi-precision, subminiature units which provide electrical performance from DC to 18 GHz. These high performance connectors are compact in size and mechanically have outstanding durability.

Features/Benefits

- Amphenol brass SMA connectors feature pre-assembled captive center contacts, brass body and coupling nuts.
- Connectors are built in accordance with MIL-C-39012.
- Can be mated with all connectors which meet the military specification mating diameters regardless of manufacturer.
- Available for .085" and .141" diameter semi-rigid cables and all the standard flexible cables including double shielded RG-316.
- Connectors are adaptable to the interconnection requirements of both systems and components.

SPECIFICATIONS*

ELECTRICAL

Impedance	50 ohms
Frequency range	.141" & .085" O.D. copper jacket semi-rigid cable. 0-18GHz. Flexible cables: 0-12.4 GHz.
Voltage rating	RG-58,141,142: 500 volts peak RG-174, 188, 316:, 375 volts peak
Dielectric withstanding voltage	.141" & RG-58 group: 1,000 VRMS. .085" & RG-316 group: 750 VRMS.
VSWR (straight connectors)	.141" O.D. semi-rigid cable: 1.05 + .005 f RG-174 group: 1.15 + .02 f RG-58 group: 1.15 + .01 f RG-178 group: 1.20 + .025 f
Contact resistance	Center: 2.0 milliohms Body: 2.0 milliohms Braid to body: 0.5 milliohms
Insulation resistance:	5000 megohms
RF leakage	-90 dB min. at 2.3 GHz
Insertion loss:	dB max. = $.06 \sqrt{f(\text{GHz})}$ Test frequency @ 6.0 GHz

MATERIAL

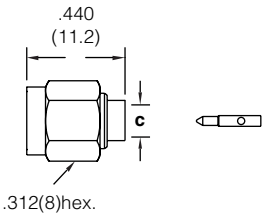

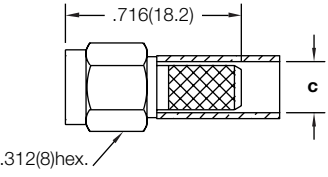

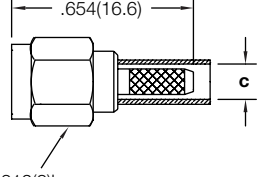

Bodies, coupling nuts, other metal parts (except as noted)	Brass per QQ-B-626
Contacts Male: Female:	Brass Beryllium copper, heat treated
Plating: Center contacts,	.000030" min. gold
Plating: Other metal parts	Standard .000010" gold or nickel plated
Insulators	TFE fluorocarbon
Gaskets	Silicone rubber
Crimp ferrules	Seamless copper tubing alloy

MECHANICAL‡

Mating	.250-36 Threaded coupling
Mating Torque	Minimum: 2 inch pounds 12 N.cm Recommended: 8 to 10 inch pounds 45 N.cm Maximum: 15 inch pounds 60 N.cm
Connector Durability	100 matings

* These characteristics are typical and may not apply to all connectors.

‡ Pressure applied on an SMA outer contact is extremely high; therefore inadequate torque of connector body will result in a slight deformation of the outer contact. Reflections will appear above 2GHz.

For phase array radar, test equipment, ILS landing systems and other instrumentation using phase matching techniques, these SMA connectors for semi-rigid coaxial cables and the SMA plug-to-Jack adapter offer a precise and simple means of phase adjustment for microwave devices.

Features/Benefits

- Connectors incorporate a threaded interconnection of variable length.
- Adjustment nut creates incremental changes in connector length and angle.
- Proper phase setting for each cable is maintained by connector locking-nuts.
(For example, one revolution of the adjustment nut results in a phase angle change of 5.7° for a 9 GHz signal [0.636 x 9]°.)
- Connectors provide ease of mechanical screw adjustments, compared to the delays and expense of laborious cable-trimming.
- Allow phase matching to be performed at the final production stages.

SPECIFICATIONS*

ELECTRICAL

Impedance	50 ohms
Frequency range	DC-18GHz.
Insertion loss:	dB max. For Adapter 901-508 = $.1 \sqrt{f(\text{GHz})}$ For Plug 901-509 = $.08 \sqrt{f(\text{GHz})}$
VSWR	See chart below
Phase Angle Adjustment Range in degrees	For Adapter 901-508 and Plug 901-509, = 0° to $[10 \times f(\text{GHz})]^\circ$ max
Phase Angle change per revolution of Adjustment Nut in degrees	For Adapter 901-508 and Plug 901-509, = $[0.636 \times f(\text{GHz})]^\circ$
Voltage rating	500 VRMS peak

MECHANICAL

Mating	Mating face dimensions compatible with the mating requirements of MIL-C-39012/55 (Type SMA)
Connector Durability	(SMA interface) 500 cycles of mating and unmating without deterioration

MATERIAL

Center Contact	Beryllium copper, Gold plated
Connector Body	Brass or Beryllium Copper, Gold plated
Adjusting Nuts and Locking Nuts	Brass with ASTRO plate finish
Connector Coupling Nut	Stainless Steel, Passivated
Insulation	TFE

Description

APC stands for Amphenol Precision Connectors and was developed by Amphenol and Hewlett-Packard engineers. The Precision family is comprised of APC-2.4, APC-3.5, APC-N, APC-7.

Amphenol's APC is the first instrument-grade coaxial connector line to achieve repeatable TE11 mode resonance-free signal transmission from DC to 50 GHz with a minimum return loss of 26 dB.

These 50 ohm connectors are designed primarily for use in test and measurement equipment where reliable performance through repeated connect/disconnect cycles is critical.

Features/Benefits

- Interface dimensions which minimize distortion/deterioration of the mating surfaces.
- Fixed bead-contact assembly which prevents transmission of mating torques to circuit elements.
- M7x0.75 thread for coupling durability and small overall connector size.
- Mating sequence in which the outer conductors before the center contacts meet, eliminating female center contact damage during mating.
- Plug coupling nut that extends beyond the male center contact to protect the contact while in the unmated condition.

Application

- Cable Assemblies
- Instrumentation
- Military
- Radio Astronomy
- Satcom

Specifications	96
Plugs & Jacks	97

The initial Amphenol® APC-2.4™ offering includes the male and female connectors for termination to 2.4mm rigid coaxial airline and twenty-two between-series adapters for high performance transitions from the 2.4mm interface to six other microwave coaxial connectors: APC-3.5®, APC-7®, APC-N, SMA, and the Wiltron K - connector.™*

*K connector is a trademark of Wiltron Co.

Features/Benefits

- DC to 50 GHz — provides highly accurate measurements which eliminate the need for costly waveguide components
- M7 x .075 coupling — provides durability and small overall connector size
- Mating sequence outer connector first — eliminates female center conductor contact damage during mating
- Coupling nut extends beyond male center contact — protects center conductor while in the unmated condition

† Envelope dimension a is a maximum of 1.5" (38.1mm) for all APC-2.4 adapters shown above. The length from reference plane to reference plane for each of these adapters is identical and equals .850" (21.6mm).

Amphenol® APC-3.5® connectors are a high performance, 50 ohm coaxial connector designed to exhibit low VSWR, low loss, and be resonance free to 34 GHz.

Features/Benefits

- Connectors are designed for use with 3.5mm rigid airline, .085 and .141 semi-rigid cable.
- Air dielectric mating face and thicker outer conductor shoulder.
- APC-3.5 design maintains mechanical and electrical integrity through repeated mating cycles.
- APC-3.5 will mate with SMA connectors.
- Provides VSWR performance typical of SMA mated pairs up to 18 GHz.

Instructions for assembling APC-3.5 connectors to 3.5mm airline are given on page XX.

APC-7™ Coaxial Connectors

Amphenol® APC-7™ connectors are precision devices which provide long life and accurate, repeatable performance in test and instrumentation applications.

Features/Benefits

- Primarily for use with rigid 7mm airline (7mm = the inner diameter of the airline outer conductor).
- Designs are also available for use with .250 semi-rigid cable, and RG-214/U flexible cable.
- Coupling mechanism is sexless thus permitting any two APC-7 connectors to be mated.
- A certified test report of VSWR will be provided when a mated pair of APC-7 connectors is ordered (131 - 91050).

NOTE: A fluted nut design is provided as an option to APC-7 connectors. To order the fluted nut configuration, simply delete the "9" from the core part number; for example:

131-91051 Hex Knurled Nut
131-1051 Fluted Nut

Specifications

ELECTRICAL

Overview	100
1.6 / 5.6	101-104
BNC (50 ohm)	105-122
BNC (75 ohm)	124-134
BNC/TNC for LMR	135-138
TNC	139-148
Reverse Polarity	149-158
Tools	159

Amphenol's family of miniature connectors includes **1.6/5.6**, **BNC** and **TNC**. These designs are all encompassing and include: "bayonet coupling", "threaded coupling", and push/pull mating styles. Additionally, the miniature connector line features many configurations and considerable varieties of coaxial cable. The large variety of product offerings provides the design engineer flexibility to choose the right connector for the project.

TNC connectors are miniature 50 ohm semi-precision units which operate from DC to 11 GHz. These connectors are weatherproof and contain a threaded coupling mechanism. These features are ideal for outdoor applications as well as where extreme vibration is a factor.

The **1.6/5.6** coaxial connectors are miniature 75 ohm units with threaded coupling mechanisms. The relative compact design of the 1.6/5.6 allows for dense packaging, making the connector ideally suited for applications where space limitations are a factor.

Amphenol's family of **BNC** coaxial connectors are available in both 50 and 75 ohm interconnect systems, providing RF performance up to 11 GHz and low reflection DC - 4 GHz. They are lightweight miniature units designed to accommodate a large variety of RG cables. These bayonet locking connectors are available in crimp-crimp, clamp-solder, SURETWIST® and field serviceable termination styles.

Description

The 1.6/5.6 series is a European design with two coupling versions: Threaded provides positive mating, Push-pull allows quick installation. Amphenol 1.6/5.6 coaxial connectors are miniature 75 ohm units operating from 0-1GHz.

The compact design of the 1.6/5.6 permits dense connector packing making these connectors ideally suited to applications where space limitation is a factor.

This series complies with DIN 47295, DIN 41626, DIN 47297, NFC 93-569, NFC 93-570, IEC 169-13, and the CECC 22230 standards.

Features/Benefits

- Meets IEC 169-13, DIN 47295 and NFC 93-570 international specifications designed for SMT.
- Plugs and bulkhead jacks are available in crimp-crimp termination versions to ensure high reliability in connector assembly and a lower cost installation method.
- Threaded coupling designed for quick connect/disconnect allows safe coupling.

Application

- Base Stations
- Cable Assemblies
- Computer / LAN
- Routers
- Switching Equipment
- Telecom
- Wireless

Description

Developed in the late 1940's, the BNC is a miniature version of the Type C. BNC stands for Bayonet Neill Concelman and is available in 50 Ohm and 75 Ohm impedance versions.

The BNC product line is a miniature quick connect / disconnect RF connector. It features two bayonet lugs on the female connector; mating is achieved with only a quarter turn of the coupling nut.

Primary Applications - Ideally suited for cable termination for miniature to subminiature coaxial cable (RG-58, 59, to RG-179, RG-316, etc.)

Features/Benefits

- Bayonet coupling mechanism provides quick mating and unmating.
- 50 and 75 ohm impedance designs allow customers to match impedance to system requirements.
- 50 and 75 ohm connectors are intermateable to ensure nondestructive mating.
- Three grades of connectors are available for military, industrial and commercial applications.

Applications

- Antennas
- Automotive (GPS)
- Base Stations
- Broadcast (75 ohm)
- Cable Assemblies
- Cable Modems
- Components
- Computers/LANs
- Instrumentation
- Network Analyzers
- Oscilloscopes
- Medical Equipment
- Mil-Aerospace
- Networks
- Radios
- Satcom
- Surge Protection
- Telecom

Description

Amphenol 50 ohm BNC connectors are miniature, lightweight units designed to operate up to 11 GHz and typically yield low reflection through 4 GHz. Designed to accommodate a large variety of RG and industry standard cables, BNC connectors are available in crimp-crimp, clamp-solder, SURETWIST®, and field serviceable termination styles. A full line of printed circuit board receptacles, bulkhead receptacles, resistor terminations, and other accessories complement the product offering.

Features/Benefits

Amphenol manufactures a full line of BNC connectors to meet all users' needs. Parts which are listed with the appropriate M39012 number in the catalog are **Military Grade** connectors produced in accordance with and actively qualified to the military specification MIL-C-39012. Connectors not listed with the M39012 number constitute the **Industrial Grade** product offering. These connectors provide comparable performance and generally feature nickel plated brass bodies, Teflon insulators, and either gold or silver plated center contacts. Amphenol's **Commercial Grade** connector offering carries the part number designation "RFX" for easy recognition. These low cost connectors typically utilize diecast and molded components. While

performance will not be equal to the Industrial or Military grade products, these connectors are ideal for use on a variety of commercial applications.

Amphenol's 50 ohm BNC connectors (where indicated) are recognized under the Component Program of Underwriter's Laboratories, Inc. They are ideal for use with medical equipment and test instrumentation where safety cannot be compromised.

Applications

- Computers/LANs
- Test and Measurement
- Medical Equipment
- Telecommunications
- Wireless/Networks

50 ohm

BNC 50 ohm Connectors	106
Plugs and Jacks	108-113
Adapters	119
PCB Connectors	120-121

ELECTRICAL

Impedance	50 ohms nominal ■
Frequency range	0-4 GHz w/low reflection
Voltage rating	500 volts peak
Dielectric withstanding voltage	1,500 volts rms.
VSWR	M39012 straight connectors: 1.3 max. 0-4 GHz M39012 right angle: 1.35 max. 0-4 GHz
Other (MIL-C-39012 cable connectors)	Contact resistance: center contact 1.5 milliohm outer contact 0.2 milliohm Braid to body 0.1 milliohm RF leakage: - 55 dB minimum at 3 GHz Insertion loss: 0.2 dB maximum at 3 GHz Insulation resistance: 5000 megohms (min.)

MECHANICAL

Mating	2-stud bayonet coupling per M39012
Cable affixment (braid or jacket)	All crimps: hex braid crimp. Clamps: screw-thread nut and braid clamp.
Cable affixment (center conductor)	Crimps: crimp or solder All others: solder only
Captivated contact	All crimps Others: where specified.
Cable retention	Crimps: 20-100 lbs. All others: 30-70 lbs.

MATERIAL

Center contacts	Male: brass Female: Beryllium copper or phosphor bronze. Silver or gold plated
Other metal parts	Brass, Nickel finish except M39012 silver.
Insulators	TFE; copolymer of styrene, glass-TFE (hermetically sealed)
Clamp gaskets	Synthetic rubber, Silicone rubber
Crimp ferrule	Copper / Brass

ENVIRONMENTAL

Temperature range	TFE insulators: - 65°C to + 165°C Copolymer of Styrene: - 55°C to + 85°C
Weatherproof	Clamps with clamp gaskets. Crimps with heat-shrink tubing.
Hermetic seals	Pass helium leak test of 2 X 10 ⁻⁸ cc/sec
Shock	MIL-Std. 202 method 202
Vibration	MIL-Std. 202 method 204 (test cond. D)
Moisture resistance	MIL-Std. 202 method 106
Corrosion	MIL-Std. 202 method 101 (test cond. B)
Temperature cycling	MIL-Std. 202 method 102 (test cond. D)
Altitude	MIL-Std. 202 method 105 (test cond. C)

MILITARY SPECIFICATIONS

MIL-C-39012	Where applicable

Description

To meet the need for higher performance, impedance matched cable interconnections, Amphenol offers a full line of 75 ohm BNC connectors. These connectors can be used in a variety of applications where true 75 ohm performance is needed to insure lower signal distortion.

Features/Benefits

Designed for the most popular 75 ohm cables used in broadcast and CATV applications as well as for plenum cables and others — these connectors feature crimp-crimp cable affixment for quick and reliable installation.

Two distinct types of 75Ω BNCs are available. Both types mate with each other and with 50Ω BNCs.

- Type 1 is designated 75Ω BNC-T1 and provides constant 75Ω performance with low VSWR DC to 4 GHz.
- Type 2 is designated 75Ω BNC-T2 and is usable with low reflection DC to 1 GHz. For applications above 1 GHz, Type 1 is recommended.

Applications

- Broadcast
- Satellite TV Earth Stations
- Telecommunications
- LAN
- Test and Measurement
- Security Transmission Systems
- Telecom
- Computer Networks
- HDTV

75 ohm

75 ohm Connectors	123
BNC Plugs and Jacks	125-132
Adapters	133-134

BNC 75 ohm Specifications

ELECTRICAL

Impedance	75 ohms nominal
Frequency range	0-4 GHz
Voltage rating	500 volts rms
Dielectric withstanding voltage	1,500 volts rms.
Insulation resistance	5,000 megohms min.
VSWR	Type 1: 1.5 + 0.1 f(GHz) DC to 4 GHz Type 2: 1.00 + 0.25 f(GHz) DC to 1 GHz

* These characteristics are typical and may not apply to all connectors.

MATERIAL

Body, coupling sleeve, male contact	Brass
Female contact	Beryllium copper or phosphor bronze
Crimp ferrule	Copper alloy
Plating	Contacts: gold Other metal parts: Nickel

MECHANICAL

Mating	2-stud bayonet lock
Cable affixment	Crimp-Crimp

ENVIRONMENTAL

Temperature range	TFE insulators: - 65°C to + 165°C Copolymer of Styrene: - 55°C to + 85°C
Weatherproof	Clamps with clamp gaskets. Crimps with heat-shrink tubing.
Hermetic seals	Pass helium leak test of 2 X 10 ⁻⁸ cc/sec
Shock	MIL-Std. 202 method 202
Vibration	MIL-Std. 202 method 204 (test cond. D)
Moisture resistance	MIL-Std. 202 method 106
Corrosion	MIL-Std. 202 method 101 (test cond. B)
Temperature cycling	MIL-Std. 202 method 102 (test cond. D)
Altitude	MIL-Std. 202 method 105 (test cond. C)

Description

A new high performance line of LMR cable connectors. Advanced communication systems have placed stringent performance requirements on connectors. Amphenol has designed BNC, SMA and TNC connectors to exceed the standard requirements.

Only Amphenol brings you all three connectors designed for high performance LMR cable to insure you have the right product for that application. These connector series provide interconnect solutions inside and between instrument racks, between equipment rooms, antenna jumpers, and anywhere quality interconnections are required.

Features/Benefits

- TNC versions are MIL-C-39012 compatible
- Weatherproof design
- Crimp-solder termination
- Tarnish-resistant Nickel plating
- Allows mating with all TNC connectors
- Allows use in inclement weather
- Ensures easy installation
- Provides corrosion resistance

Applications

- AM and FM Broadcast
- CATV
- Cellular
- ESA Jumper
- ESMR
- HF Communications
- LMR
- Paging
- PCS
- Point-to-Point

Description

Developed in the late 1950's, TNC is a threaded version of the BNC. TNC stands for Threaded Neill Concelman and is named after Amphenol engineer Carl Concelman. This series features screw threads for mating. TNC are miniature, threaded weatherproof units with a constant 75 ohm impedance and operate from 0-11 GHz.

There are two families of TNC connectors:

- Standard
- Reverse Polarity

They are an ideal choice for use in cellular and mobile communications, and test and measurement equipment. They are also widely used in airframe, aerospace and radar applications where extreme vibration is a factor.

Cable connectors range from RG6 to RG179 and include LMR low loss cable.

Features/Benefits

- Threaded coupling interface ensures connector will not decouple in vibration-intensive applications.
- Many TNC connectors are recognized under the component program of Underwriter's Laboratories and have undergone stringent testing from an independent laboratory.
- Performance from 0-11 GHz operates in many applications.

Applications

- Antennas
- Automotive (Cell Phones)
- Base Stations
- Cable Assemblies
- Components
- Computer Networks/LANs
- Instrumentation
- Mil/Aero
- Radar
- Telecom

TNC

Specifications	140
Plugs	141-142
Angle Plugs & Jacks	143-144
PCB Receptacles	145-147

ELECTRICAL

Impedance	50 ohms nominal
Frequency range	0-11 GHz
Voltage rating	500 volts peak
Dielectric withstanding voltage	1,500 volts rms.
VSWR	M39012 straight connectors: 1.3 max. 0-11 GHz M39012 right angle: 1.35 max. 0-11 GHz
Other (MIL-C-39012 cable connectors)	Contact resistance: center contact 1.5 milliohm outer contact 0.2 milliohm Braid to body 0.1 milliohm RF leakage: -60 dB minimum at 3 GHz Insertion loss: 0.18 dB at 9 GHz Insulation resistance: 5000 megohms (min.)

MILITARY SPECIFICATIONS

MIL-C-39012	Where applicable
-------------	------------------

* Amphenol TNC connectors are classified as weatherproof only when used in combination with other Amphenol TNC connectors.

MECHANICAL

Mating	7/16 threaded coupling
Cable affixment (braid or jacket)	All crimps: hex braid crimp. Clamps: screw-thread nut and braid clamp.
Cable affixment (center conductor)	Crimps: crimp or solder All others: solder only
Captivated contact	All crimps Others: where specified.
Cable retention	Clamps: 20-50 lbs. Crimps: 20-100 lbs.

MATERIAL

Center contacts	Male: Brass; female beryllium copper or phosphor bronze. Silver or gold plated
Other metal parts	Brass: Nickel finish except M39012 silver.
Insulators	TFE, Delrin
Clamp gaskets	Synthetic rubber, Silicone rubber
Crimp ferrule	Copper

ENVIRONMENTAL

Temperature range	- 65°C to + 165°C
Weatherproof	Clamps with clamp gaskets. Other Crimps with heat-shrink tubing.
Hermetic seals	Pass helium leak test of 2×10^{-8} cc/sec
Shock	MIL-Std. 202 method 202
Vibration	MIL-Std. 202 method 204 (test cond. D)
Moisture resistance	MIL-Std. 202 method 106
Corrosion	MIL-Std. 202 method 101 (test cond. B)
Temperature cycling	MIL-Std. 202 method 102 (test cond. D)
Altitude	MIL-Std. 202 method 105 (test cond. C)

* These characteristics are typical and may not apply to all connectors.

Description

Reverse Polarity is a keying system accomplished with a reversed interface. This ensures, for example, a Reverse Polarity SMA does not mate with a Standard SMA.

Amphenol's RP Plugs have a female contact; Jacks have a male contact. Some competitors prefer to use reverse threading to accomplish their RP keying.

Available for RG-316, RD-316, RG-142, RG-178, Belden 9913, and RG-58 cable.

Features/Benefits

- May be used in applications where keying is necessary to eliminate mis-matching from mating with a standard connector.
- MIL Standard 348 interface ensures high quality and premium performance.
- Crimp-crimp termination allows easy and quick assembly.
- Fits a variety of cables and configurations allowing the customer to choose the right connector for the application.

Applications

- Antennas
- Cable Assembly
- GPS
- Spread Spectrum Wireless
- WLAN

Description

Amphenol reverse polarity BNC, TNC & SMA connectors (RP-BNCTM, RP-TNCTM, RP-SMATM) are designed for use in spread spectrum wireless applications.

Features/Benefits

These connectors may also be used in applications where keying is a necessity. The RP-BNCs, RP-TNCs & RP-SMAs meet the same high quality requirements as standard Amphenol BNCs, TNCs & SMAs. They provide excellent performance — DC to 4 GHz for RP-BNCs, DC to 4 GHz for RP-TNCs and DC to 18 GHz for RP-SMAs.

Applications

- Spread Spectrum Wireless Devices
- Inventory Control

Reverse Polarity

TNC Connectors	156
BNC Connectors	157

Reverse Polarity RP-BNC and RP-TNC

SPECIFICATIONS*

ELECTRICAL

Impedance	50 ohms
Frequency range	BNC: 0-4 GHz TNC: 0-4 GHz
Voltage rating	500 volts peak
Dielectric withstanding voltage	1,500 volts rms.
VSWR	Straight connectors 1.3 max. 0-4 GHz Right angle connectors 1.35 max. 0-4 GHz
Insertion loss	0.18 dB @ 9 GHz
Insulation resistance	5,000 megohms

MECHANICAL

Mating	BNC: Bayonet coupling TNC: .437-28 threaded coupling
Cable affixment	Braid & jacket: hex crimp
Center conductor	Hex crimp or solder
Captivated contact	Except as noted
Cable retention	20 to 100 lbs. depending on cable

MATERIAL

Center contacts	Male: brass. Female: beryllium copper or phosphor bronze. Gold plated
Crimp ferrule	Copper, nickel plated
Other metal parts	Brass (bright nickel finish)
Insulators	TFE
Weatherproof gaskets	Silicone rubber

* These characteristics are typical and may not apply to all connectors.

ENVIRONMENTAL

Description

Amphenol offers a full line of termination tooling to meet your specific production requirements. All tools meet Amphenol's stringent design and quality requirements, including full cycle ratchet control, which prevents the connector from being removed from the tool prior to completing the crimping operation. Amphenol's tools provide a consistent and reliable crimp each and every time, thereby insuring the integrity of the connector termination.

Tools

CTL Crimp Series	160-161
Pneumatic Bench Crimper	162
TWINHEX Crimp Tool System	162
TRIHEX Crimp	163
ECONOHEX Crimp	163
MMCX	164

Bench Mounted Pneumatic Crimp Machine

This pneumatic-powered crimp tool makes production termination for coaxial cable easy, efficient and precise. Our compact (less than 20 pounds) unit is hand-actuated. The dual-position feet allow horizontal or vertical loading for maximum efficiency. The manually-activated mode is adaptable to either right- or left-hand operation. The connector/cable loading mechanism is spring loaded to help keep hands away from the work area during the crimp cycle. The die holder is compatible with industry standard die sets from Connex, Ideal Industries, Paladin and Sargent. The adjustable crimp height allows for termination of coaxial cable, as well as discrete wire terminations, with appropriate dies for custom crimp applications.

PCTL-S1000

CTL Series Crimp Tools

Amphenol CTL Series crimp tools are sold complete as a tool handle with the die set included. Purchase of some or all of the seven tools shown below will allow the user to terminate most popular RG coaxial cables.

To order the crimp tool required for a specific application, please refer to the Connector Assembly Instruction for the Amphenol part number. The recommended tool number is listed under the column labeled "CTL Series Tool Number".

Hand Crimp Tool

The Amphenol TWINHEX crimp tool system is used in Industrial/ Military Standard applications. It consists of a tool frame and a selection of die sets for use in assembling Amphenol RF connectors.

Pneumatic Crimp Tool

The Amphenol pneumatic crimp tool 227-60 is designed for use in high volume RF connector/cable assembly applications. Bench mountable on a swivel base, this high speed crimp tool runs on a standard 85/100 psi air-line and is actuated by a foot switch for hands-free operation.

Order Information

TWINHEX tool frame 227-944 (M22520/5-01) and pneumatic crimp tool 227-60 are sold without dies. To order the die set required for your application, please refer to the Connector Assembly Instruction for the connector part number. The recommended die set number is listed in the column headed "Die Set for Tool 227-944" (& for 227-60).

Military Number	Amphenol Number	Description
227-944 ▲	M22520/5-01	Hand Tool Frame for use with Twinhex 227-1221-XX and 227-980-X Die Sets (Die Sets sold separately)
227-60 ▲	—	Pneumatic Crimp Tool with Swivel Base, Foot Switch and Hose (Connects tool to foot switch) (Die Sets for 227-60 are same as those used in Hand Tool Frame 227-944 and are sold separately)

TRIHEX Crimp Tool

The Amphenol TRIHEX crimp tool provides an economical approach to terminating crimp connectors.

This compact, easy-to-use, three-cavity hand tool incorporates the same crimping ability as most popular two-die crimp tools. But quality is not sacrificed for economy:

- **Full cycle, reinforced ratchet control** — provides the high repeatability and reliability benefit of crimp terminated connectors.
- **Heavy duty steel construction** — stands up to in-the-field use. Two models are available, providing maximum flexibility for use in a wide variety of applications.

ECONOHEX™ Crimp Tool and Dies

The Amphenol ECONOHEX hand crimp tool is similar in features and application to the TRIHEX crimp tools. However, the ECONOHEX provides the additional feature of die set insertion and removal such that the purchase of the ECONOHEX tool handle and some or all of the four die sets will allow the user to terminate most popular RG coaxial cables as well as Twinaxial cable for IBM system 3X networks.

Overview	166
Twinaxial	167
Twin BNC	171
Triax	173
UHF	185
Mini-UHF	193
C, SC, HN	197
FME	205
Between Series Adapters	209

Amphenol's family of "Standard" connectors includes Twinaxial, Twin BNC, UHF, Mini-UHF, Triax, C, SC, HN and FME. These units utilize threaded coupling and bayonet locking mechanisms. The standard connector line features many configurations and accommodates a large variety of RG and industry standard cables, allowing the design engineer excellent flexibility.

Amphenol's **Twinaxial** and **Twin BNC** connectors are designed for 78 and 95 ohm twin conductor cables. Twinaxial operate from DC to 200 MHz range and Twin BNC operate from DC to 100 MHz range. The Twinax polarized keyway construction and the Twin BNC polarized contact design ensure proper signal continuity of the cable connectors. They are most popular for computer/network systems and process equipment.

Amphenol's **UHF** connectors are the Grand Daddies of all RF connectors. First developed in the 1930's, they hold their age very well and are still quite popular. These units feature a threaded coupling mechanism and are general purpose; rugged units used in low frequency systems up to 300 MHz. Typical applications for the UHF connector are antenna, base stations and CB radios.

Amphenol's **C** connectors are medium-size, weatherproof types. The C design has a standard voltage

rating of 1,500 volts and low VSWR up to 11 GHz. The coupling is two stud bayonet lock. C connectors provide constant 50 ohm impedance. They may be used with 75 ohm cable, at lower frequencies (below 300 MHz) where no serious mismatch is introduced.

Mini-UHF are a miniature version of the UHF connectors invented in the 1930's for use in the radio industry. Mini-UHF connectors debuted in the 1970's.

Mini-UHF connectors are designed for use as coaxial interconnection in cellular mobile telephone systems and similar applications where size, weight and cost factors are critical.

These connectors terminate RG-58, -58A, -58B, -58C, and Belden 9258 cables.

Crimp-type cable plugs and jacks are available as well as panel and printed circuit board receptacles.

Amphenol **SC** connectors are medium size, constant 50 ohm impedance units manufactured to meet MIL-C-39012 category D, Specification sheets 35 through 43, meeting all of the mechanical and electrical requirements of the Limited Coordination Specification (LC Spec.) as generated by the U.S. Air Force. Connector mating is a .687-245 UNEF screw thread.

Amphenol **HN** connectors are medium size weatherproof units designed for high voltage applications. Coupling is 3/4-20 threaded. HN connectors feature captivated contact design which prevents contact recession under temperature extremes and mechanical stresses.

Description

Twinax and Twin BNC connectors are used with 78 and 95 ohm conductor cables and operates from 0-200 MHz.

Due to the improved shielding characteristic (>30dB), these connectors are used in balanced low level and high sensitivity circuits.

Meets applicable sections of MIL-C-3655

Twinax connectors feature keyway polarization to ensure system integrity and prevent signals from being mixed. Ideal for computer network applications.

Twin BNC features the same two-stud bayonet locking mechanism as standard BNC connectors and polarized contacts (one female, one male) to prevent signals from being mixed. They are ideal for computer network and process control devices.

Features/Benefits

- Polarized key and keyway construction guarantees correct dual contact mate.
- Twinax center pins can be crimped or soldered to provide dual signals from one connector.
- Large threaded connectors designed for rugged use.
- Crimp contacts ensures lower cost of installation.
- Clamp assembly allows quick assembly without requiring special tools.
- 2 Stud bayonet design allows quick and easy coupling.

Application

- Cable Assemblies
- Components
- Mil-Aerospace
- Computer Networks/LAN
- Process Equipment

Twinax

Specifications	168
Connectors	169-170

Twin BNC

Specifications	171
Connectors	172

ELECTRICAL

Impedance	Used with 78 ohm and 95 ohm twin conductor cables.
Frequency range	Keyway polarization: 0-200 MHz, 0-500 MHz with caution.
Voltage rating	Keyway polarization: 500 volts peak.

ENVIRONMENTAL

Temperature range	Copolymer of Styrene: - 55°C to +85°C Noryl: - 45°C to +121°C
Weatherproof	All Twinax Contact connectors are weatherproof when mated.

NOTE: These characteristics are typical and may not apply to all connectors.

MECHANICAL

Mating	Keyway polarization: 3/4-20 threaded coupling keyed 90°
Cable affixment	Braid clamp, "V" groove gasket and clamp nut mechanism.

MATERIAL

Contacts	Male: brass Female: beryllium copper. Silver plated or gold plated.
Other metal parts	Brass: Nickel finish
Insulators	Copolymer of styrene, Noryl, or polyester, as listed.
Clamp gaskets	Silicone rubber or synthetic rubber

MILITARY SPECIFICATIONS

Amphenol twinaxial connectors, polarized key and keyway construction, meet applicable sections of MIL-C-3655.

Description

Amphenol Triax connectors are used in applications where maximum RF shielding and minimum noise radiation are required.

Features/Benefits

- Available in 7/8-20 and 11/16-24 threading, Triax C, Triax BNC and Triax TNC coupling provides customer flexibility in their design.
- 5000V peak with Teflon insulators allows for high temperature applications.
- Solder/Clamp assembly procedure requires no special crimp tools.
- Precision machined for consistent performance provides dependability.

Applications

- MIL-Aerospace
- Air-frame
- Shipboard

Description

UHF - Invented in the 1930's by an Amphenol engineer, E. Clark Quackenbush, for use in the radio industry.

UHF coaxial connectors are general purpose units developed for use in low frequency systems from 0.6 to 300 MHz.

UHF is an acronym for "Ultra High Frequency". When the UHF was introduced, 300 MHz was considered High Frequency.

The coupling on a UHF is threaded.

Since UHF connectors are low cost, the impedance is variable.

Features/Benefits

- Optional reducing adapters accommodates a wide range of popular coaxial cables.
- Solder termination types require no special assembly tools.
- Crimp termination type connector available provides a lower cost installation method.
- Large size threaded coupling - rugged design.
- Non-demanding specifications and low cost.

Applications

- Antennas
- Cable Assemblies
- CB Radios
- Low Frequency Applications
- Public Address Systems

UHF

Specifications	186
Plugs, Reducing Adapters	187-188
Receptacles	189
Adapters/Hoods	190
Cap & Chain	191

ELECTRICAL

Impedance	Non-constant
Frequency range	0-300MHz
Voltage rating	500 volts peak

MECHANICAL

Mating	5/8-24 threaded coupling
Cable affixment	Braid solder, set screw, clamp and crimp

ENVIRONMENTAL

Temperature range	Mica-filled phenolic insulators: - 55°C to + 149°C Copolymer of styrene and polystyrene: - 55°C to + 85°C TFE insulators: - 65°C to + 165°C
Weatherproof	Except as noted, all series UHF are non-weatherproof

MATERIAL

Contacts	Male: brass; silver plated Female: beryllium copper, silver plated
Bodies	Brass and die cast zinc
Other metal parts	Brass
Plating	Nickel and silver
Insulators	TFE, copolymer of styrene, polystyrene, mica-filled phenolic and PBT polyester or equal

NOTE: These characteristics are typical and may not apply to all connectors.

Description

Mini-UHF are a miniature version of the UHF connectors invented in the 1930's for use in the radio industry. Mini-UHF connectors debuted in the 1970's.

Mini-UHF connectors are designed for use as coaxial interconnection in cellular mobile telephone systems and similar applications where size, weight and cost factors are critical.

These connectors terminate RG-58, -58A, -58B, -58C, and Belden 9258 cables.

Crimp-type cable plugs and jacks are available as well as panel and printed circuit board receptacles.

Features/Benefits

- Miniature 3/8-24 thread size provides excellent RF performance for applications up to 2.5 GHz.
- Small size and light weight provides excellent electrical characteristics at an affordable price.
- Crimp-type cable termination provides low installation cost.
- Diecast bodies and molded insulators ensures low cost.
- Teflon insulator provides higher temperature range.

Applications

- Antennas
- Automotive (Cell phones)
- Automotive (GPS)
- Cable Assembly
- Cable Modems
- Components
- PC/LAN
- Telecom

Mini-UHF

Specifications	194
Plugs, Jacks & Receptacles	195

ELECTRICAL

Impedance	50 ohms
Frequency range	0-2.5 GHz
Voltage rating	335 volts at sea level
Dielectric withstanding voltage	1,000 volts rms.
VSWR	1.25 max., 0-2.5 GHz
Insulation resistance	5,000 megohms min.

ENVIRONMENTAL

Temperature range	- 55°C to + 85°C
Shock	Per MIL-Std. 202
Vibration	Per MIL-Std. 202
Thermal shock	Per MIL-Std. 202
Salt spray	Per MIL-Std. 202

MATERIAL

Plug coupling nuts and jack bodies	Brass or zinc alloy
Other metal parts	Brass
Insulator	Polypropylene
Plating	Contacts - Tin lead Other metal parts - Nickel

MECHANICAL

Mating	3/8-24 threaded coupling
Cable affixment (braid)	Crimp
Cable affixment (center conductor)	Crimp
Cable retention	40 lb. min.

NOTE: These characteristics are typical and may not apply to all connectors.

Description

Amphenol C connectors are medium size and weatherproof. Coupling is two-stud bayonet lock. C connectors provide constant 50 ohm impedance. They may be used with 75 ohm cable, at lower frequencies (below 300 MHz) where no serious mismatch is introduced.

Amphenol HN connectors are medium size weatherproof units designed for high voltage applications. HN connectors feature captivated contact design which prevents contact recession under temperature extremes and mechanical stresses. Coupling is 3/4-20 threaded.

Amphenol SC connectors are medium size, constant 50 ohm impedance units manufactured to meet MIL-C-39012 category D, Specification sheets 35 through 43, meeting all of the mechanical and electrical requirements of the Limited Co-ordination Specification (LC Spec.) as generated by the U.S. Air Force.

Connector mating is a .687-24 UNEF screw thread.

Features/Benefits

- C — two-stud bayonet lock allows quick & easy coupling.
- HN — 3/4-20 thread withstands rugged applications.
- SC — MIL qualified per M39012 provides consistent performance and dependability.

Applications

- Instrumentation
- Cable Assemblies
- Components
- MIL Aerospace
- Airframe
- Test & Measurement

Description

Amphenol's 81 Series FME connectors are used for mobile antenna applications and can be adapted for either UHF, Mini-UHF, TNC, BNC and N connector interfaces using BSA adapters.

Features/Benefits

- Low cost
- Crimp assembly providing easy installation
- Between Series adapters available for ease of adaptibility

Applications

- Telecommunications
- Wireless

Type FME

Specifications	206
Connectors	207

ELECTRICAL

Impedance	50 Ohms nominal
Frequency range	DC - 200 MHz

MATERIAL

Body, coupling sleeve, male contact	Brass
Female contact	Phosphor bronze
Crimp ferrule	Brass
Plating	Contacts: gold Other metal parts: Nickel
Insulator	Teflon or Delrin

MECHANICAL

Mating	M8XP .75 thd.
Cable affixment	Crimp

Description

Amphenol® Between Series Adapters are used to join two incompatible series. When a single connector series is involved, the adapters are called “In-Series” and are described within the catalog section dealing with that series. The adapters cataloged here provide a transition from one connector series to another.

Amphenol® describes an adapter by referring to its own construction. We indicate the specific series involved and the mating configuration of each end of the adapter required...SMA jack to BNC plug, for instance. One end of the adapter is an SMA jack, the other end is a BNC plug indicating it joins an SMA plug to a BNC jack.

Features/Benefits

- Broad line of adapters covering all the major series to provide the user maximum flexibility.

Applications

- Used to join two incompatible series.

Between Series Adapters

About this Index

You will find the various series listed alphabetically. In addition, this is a redundant index, which means that — because each Between Series Adapter has two distinct ends—we have listed each adapter twice...once under each series. Thus, no matter which end of the adapter comes to mind when you go to look it up in this index, you’ll be able to find it. Also note, the page number refers to the location of the photograph of the adapter.

Wireless

Amphenol's family of "Wireless" connectors includes N, F, G, and 7/16 type connectors. The primary usage of Wireless types are for the communications/broadband industries. This line features superior performance to today's highest industry standards. Our Wireless connectors feature threaded coupling mechanisms, a variety of cable choices, and PCB solutions.

Amphenol **Type N** connectors are a 50 ohm coaxial interconnect series featuring threaded coupling mechanism and excellent RF performance for DC to 11 GHz. These connectors are available for a wide range of popular cable sizes and crimp/crimp terminations for low cost installation.

Type F connectors serve both the low cost and high performance market. With prices ranging from \$.50 to \$.95, Amphenol provides a high performance solution. All connectors comply with a 3/8-32 thread specification.

The Type F is similar to the Type G except it is threaded rather than snap-on. Primary applications are for cable television (CATV), set top boxes, and cable modems

Amphenol's Type F achieves a -30dB return loss at 1 GHz and accepts any cable center conductor from .022 to .042.

The **Type G** is a snap-on alternative to the Type F with a 15A continuous current rating.

All connectors comply with the 3/8-32 UNEF Thread specification and the Mil-Std 202 specification for vibration, shock, thermal shock, moisture resistance and salt spray.

Since the Type G has an impedance of 75 ohms, it is ideal for CATV applications.

The Type G line consists of Bulkhead Mount Jack Receptacles and PCB Mount Jack Receptacles.

The **7/16** series name derives from the metric dimensions of the connector interface: 7mm OD of inner contact, 16mm ID of outer contact. 7/16 connectors are designed for use in communications systems with power levels of 100 watts per channel.

Long popular in Europe, the 7/16 interface has gained acceptance in the U.S. for its ability to operate at elevated power levels.

There are three families of 7/16 DIN connectors:

- Corrugated Cable Connectors (for both Annular and Superflex cable)
- Standard Cable Connectors
- Custom (Series 7/16)

Deutsh Industries Norm (DIN) are German standards gaining acceptance worldwide.

Description

Named for Paul Neill of Bell Labs and developed in the 1940's. The Type N offered the first true microwave performance.

Type N connector was developed to satisfy the need for a durable, weatherproof medium size RF connector with consistent performance through 11 GHz.

There are two families of Type N connectors:

- Standard N (Coaxial Cable)
- Helical N (Corrugated Cable)

Primary applications are the termination of medium to miniature size coaxial cable:

RG-8 and RG-225

RG-58 and RG-141

Features/Benefits

- Accommodates a wide range of medium to miniature sized RG coaxial cables in a rugged medium size design. Provides customer flexibility in their design and manufacturing with a durable connector.
- Broad line of Military (M39012 prefix), Industrial (UG prefix), and Commercial Grade (RFX suffix) products available. Gives customer choices in weighing cost versus performance benefits.
- Available in many styles: Plugs (Straight and Right Angle) and Jacks (Panel Mount, Bulkhead Mount, Receptacle). Meets many customer application demands.

Application

- Antennas
- Base Stations
- Broadcast
- Cable Assemblies
- Components
- Instrumentation
- Mil-Aero
- Radar
- Radios
- Satcom
- Surge Protection
- WLAN

Description

Intermodulation Distortion (IMD) is of increasing concern to many Wireless Infrastructure OEMs due to the need for higher power applications and increased receiver sensitivity performance. Having the ability to measure IMD in-house gives Amphenol the unique ability to understand the affects of our connector designs on IMD generation and enabling Amphenol to design the highest performance IMD connectors in the industry.

Our new series of Low Intermodulation N connectors is a result of our efforts in connector design optimization.

Features/Benefits

- Typical IMD -125 dBm
- All components silver plated
- 360° outer contacts
- Gold plated inner contacts
- EZ HEZ™ coupling nut for ease of installation
- Available for 1/4", 3/8" and 1/2" superflexible corrugated cables, and 1/2", 7/8", 1 1/4", 1 5/8", standard flexible corrugated cables
- Consult your Amphenol sales representative for details

Applications

- Cellular
- PCS
- Microwave Radio
- Paging

Annular Type N

Specifications	239
Plugs and Jacks	240-243

Type N Corrugated Cable Connectors

RF coaxial connectors are the most important element in your cable system. Corrugated copper coaxial cables have the potential to deliver all the performance your system requires, but they are often limited by the performance of the connectors. TXL coaxial connectors have been designed from the ground up to deliver optimum performance, while retaining ease of installation.

Intermodulation distortion, a major concern in today's communications systems, is consistently low with TXL connectors. Typical performance is -125 dBm (-168 dBc). In-house IMD measurement capability gives Amphenol the unique ability to understand the effects of connector design elements on IMD generation and to design the best performing connectors in the industry.

Self-flaring designs are easily attached with standard hand tools in the field, and are highly resistant to pull off and twist off.

All TXL coaxial connectors are optimally matched to their cables for low VSWR and insertion loss.

Two-Piece Design

All TXL connectors feature a simple two-piece design for easier attachment, and all connectors for a given size share a common back nut and trimming dimensions.

Easy-Hex Coupling Nut

Unique coupling nut design allows tightening by hand or with a standard wrench.

One-Piece Body

Many TXL connectors feature one-piece bodies. The outer conductor contact and connector body are a single piece to minimize IMD generation.

Plated Surfaces

Center contacts are gold or silver plated. Bodies are white bronze plated for excellent IMD performance, and are corrosion resistant for a long, trouble-free life.

Pre-assembled O-Rings

O-rings are pre-assembled to the back nuts, eliminating installation problems and lost parts.

Captive Center Pins

Captive center pins simplify installation and eliminate performance variations due to soldering errors and incorrect pin depths.

360° Contact

Continuous 360° outer conductor contact is proven to minimize IMD generation compared to spring finger contacts.

Type N - Corrugated Specifications

ELECTRICAL

Impedance	50 ohms
Frequency range	11.0 GHz
Return Loss (Freq. GHz)	33 dB (1-2 GHz) 28 dB (2-3 GHz)
Operating voltage	max. 707 vrms
Dielectric withstanding voltage	2,000 vdc
Other	Peak power: max 10kW Avg. power: max .60kW Insulation resistance: min 5,000 MOhms Insertion loss: .05 freq GHz Shielding effectiveness: min. 125 dB 3rd order IM product, typical -125 dBm (-168 dBc)

MECHANICAL

Type N

Description

Type F connectors serve a low cost market with prices from \$0.50 to \$0.95. Amphenol provides a high performance alternative. All connectors comply with a 3/8-32 thread specification.

The Type F is similar to the Type G except it is threaded rather than snap-on. Primary applications are for cable television (CATV), set top boxes, and cable modems

With the deployment of 750 MHz Hybrid Fiber Coax (HFC) networks, it became increasingly obvious that existing low performance F receptacles could not be used in high speed cable modems and customer interface units (CIUs). The industry has challenged connector manufacturers to develop high performance connectors featuring -30 dB return loss at 1 GHz. Additionally, these high performance connectors must still accept .022-.042 in. diameter conductors.

Features/Benefits

- Patent pending contact design provides a truly cylindrical coaxial contact and provides superior RF performance and excellent insertion/withdrawal characteristics.
- 30 dB return loss to 1 GHz ensures a high performance specification that outperforms competition.
- Multiple PCB mount packages: surface mount, edge mount, right angle and straight, meets many customer applications needs.
- Accommodates .022 - .042 inch center conductor sizes. One connector accommodates a wide range of cable sizes reducing part numbers.

Applications

- Cable Assemblies
- CATV
- CIMs

Description

Amphenol offers an assortment of Type F and G coaxial adapters designed to meet application specific needs of equipment designers.

With the deployment of 750 MHz Hybrid Fiber Coax (HFC) networks, it became increasingly obvious that existing low performance adapters and receptacles could not be used in the new high performance equipment. A need for high performance connectors featuring -30 dB at 1 GHz and -20 dB at 3 GHz became a reality. Additionally, these high performance connectors must still accept .022-.042 in. diameter conductors.

Working with industry leaders, Amphenol has developed a variety of F and G adapters for use on high performance equipment. These connectors utilize Amphenol's unique patented female contact design featuring a true cylindrical phosphorous bronze coaxial contact. As a result, superior RF performance and excellent insertion/withdrawal characteristics for .022-.042 in. diameter center conductors are achieved.

The F and G adapters are available in multiple styles including straight and right angle PCB mount as well as SMD versions.

All connectors comply with the 3/8-32 UNEF Thread Specification and the MIL-Std. 202 Specification for vibration, shock, thermal shock, moisture resistance and salt spray.

Features/Benefits

- Patent pending contact design provides a truly cylindrical coaxial contact.
- 30 dB return loss to 3 GHz.
- Accommodate .022-.042 in. center conductor sizes.

Applications

- High Speed Modems
- CIMs
- Hybrid Fiber Coax Networks
- CATV
- Head End Equipment
- Set Top Boxes

NOTES:

1. Dielectric must not protrude beyond reference plane
2. Minimum 4 full threads
3. Reference plane after installation on standard port, tightened to 30 inch pounds and removed
4. Maximum envelope dimension
5. Maximum 1 thread lead-in
6. Minimum diameter of reference plane
7. ANSI specification B1.1
8. Radius optional
9. Connectors must withstand a minimum torque of 60 inch pounds without damage per IPS-TP-400

*many Amphenol Type F connectors comply to the above specifications.

Description

The Type G is a snap-on alternative to the Type F with a 15A continuous current rating.

All connectors comply with the 3/8-32 UNEF Thread specification and the Mil-Std 202 specification for vibration, shock, thermal shock, moisture resistance and salt spray.

Since the Type G has an impedance of 75 ohms, it is ideal for CATV applications.

The Type G line consists of Bulkhead Mount Jack Receptacles and PCB Mount Jack Receptacles.

Features/Benefits

- Push-on blind mate capabilities using BeCu springs provide quick installation; springs allow multiple matings.
- Version available with 15 Amp continuous current capability meets new generation equipment for HFC Networks. (Hybrid Fiber Coax).
- Patent pending contact design provides a truly cylindrical coaxial contact provides superior RF performance and excellent insertion/withdrawal characteristics.
- 30 dB return loss to 1 GHz with 10 Amp current capability. 20 dB return loss with 15 Amp version provides high performance; outperforms competition.

Application

- CATV
- Head End Equipment
- Components (Amplifiers)
- Hybrid Fiber Coax Networks
- Set Top Boxes

Description

The 7/16 series name derives from the metric dimensions of the connector interface: 7mm OD of inner contact, 16mm ID of outer contact. 7/16 connectors are designed for use in communications systems with power levels of 100 watts per channel.

Long popular in Europe, the 7/16 interface has gained acceptance in the U.S. for its ability to operate at elevated power levels.

There are three families of 7/16 DIN connectors:

- Corrugated Cable Connectors (for both Annular and Superflex cable)
- Standard Cable Connectors
- Custom (Series 7/16)

Deutsh Industries Norm (DIN) are German standards gaining acceptance worldwide.

Features/Benefits

- Low IMD and low VSWR provides improved system performance.
- Self flaring design ensures ease of installation with standard hand tool.
- Preassembled gasket protects against dust (IP68) and water (IP68), per IEC 169.
- Limited internal junctions reduces sources of IMD.
- Silver plated contacts and silver or white bronze plated bodies deliver a high conductivity and corrosion resistance for a long, trouble free life.
- Easy-Hex coupling nut allows tightening by hand or with a standard wrench for ease of mating.

Application

- Antennas
- Base Station
- Broadcast
- Cable Assembly
- Components (Control)
- Lightning Protection
- Satcom

JACK

Corrugated Cable Connectors

RF coaxial connectors are the most important element in your cable system. Corrugated copper coaxial cables have the potential to deliver all the performance your system requires, but they are often limited by the performance of the connectors. Corrugated connectors have been designed from the ground up to deliver optimum performance, while retaining ease of installation.

Intermodulation distortion, a major concern in today's communications systems, is consistently low with these connectors. Typical performance is -125 dBm (-168 dBc). In-house IMD measurement capability gives Amphenol the unique ability to understand the effects of connector design elements on IMD generation and to design the best performing connectors in the industry.

Self-flaring designs are easily attached with standard hand tools in the field, and are highly resistant to pull off and twist off.

All corrugated coaxial connectors are optimally matched to their cables for low VSWR and insertion loss.

Two-Piece Design

All connectors feature a simple two-piece design for easier attachment, and all connectors for a given size share a common back nut and trimming dimensions.

Easy-Hex Coupling Nut

Unique coupling nut design allows tightening by hand or with a standard wrench.

One-Piece Body

Many connectors feature one-piece bodies. The outer conductor contact and connector body are a single piece to minimize IMD generation.

Plated Surfaces

Center contacts are gold or silver plated. Bodies are white bronze plated for excellent IMD performance, and are corrosion resistant for a long, trouble-free life.

Pre-assembled O-Rings

O-rings are pre-assembled to the back nuts, eliminating installation problems and lost parts.

Captive Center Pins

Captive center pins simplify installation and eliminate performance variations due to soldering errors and incorrect pin depths.

360° Contact

Continuous 360° outer conductor contact is proven to minimize IMD generation compared to spring finger contacts.

Step 1

Step 1 Slide coupling ring onto cable. Cut end of cable even and strip jacket, braid and dielectric to dimensions shown in table. All cuts are to be sharp and square. Do not nick braid, dielectric or center conductor. Tin exposed center conductor and braid, avoiding excessive heat.

Step 2

Step 2 Screw the plug sub-assembly on cable. Solder assembly to braid through solder holes, making a good bond between braid and shell. Solder conductor to contact. Do not use excessive heat.

Step 3

Step 3 For final assembly on straight plugs, move coupling ring forward and screw in place on plug sub-assembly.

UG STANDARD SOLDER TYPE WITH REDUCING ADAPTER

FOR PLUGS 83-1SP, 83-1SP-1050, 83-1SP-15RFX, 83-822, USING 83-168 83-168-RFX, OR 83-185, 83-185-RFX REDUCING ADAPTER

83-750	UHF Plug	59	58	Solder	Solder	.750(19.1)	.375(9.5)	.625(15.9)	.689(17.5)	.375(9.5)	.551(14.0)
83-822	UHF Plug	59	58	Solder	Solder	.750(19.1)	.375(9.5)	.625(15.9)	.689(17.5)	.375(9.5)	.551(14.0)

Step 1

Step 1 Slide coupling ring and adapter onto cable. Cut end of cable even and strip jacket to dimension shown in table.

Step 2

Step 2 Position adapter flush with end of cable jacket. Fan braid slightly and fold back over body of adapter as shown. Press braid down over body and trim to dimension **b**. Bare conductor to dimension **c** shown in table. Tin exposed center conductor and braid, avoiding excessive heat.

Step 3

Step 3 Screw plug sub-assembly onto adapter. Solder braid to shell through solder holes, making a good bond between braid and shell. Solder conductor to contact. Do not use excessive heat.

Step 4

Step 4 For final assembly, screw coupling ring onto plug sub-assembly.

C4 — BRAID CRIMP - SOLDER CENTER CONTACT

Step 1

Step 1 Cut end of cable even. Strip cable to dimensions shown in table. All cuts are to be sharp and square. Do not nick braid, dielectric or center conductor. Tin center conductor avoiding excessive heat.

Step 2

Step 2 Slide coupling nut and ferrule over cable jacket. Flair braid slightly as shown. Install cable into body assembly, so inner ferrule portion slides under braid, until braid butts shoulder. Slide outer ferrule over braid until it butts shoulder. Crimp ferrule with tool and die set indicated in table.

Step 3

Step 3 Soft solder center conductor to contact. Avoid heating contact excessively to prevent damaging insulator. Slide/screw coupling nut over body.

C5 — UHF CRIMP-CRIMP TYPE-C5

Amphenol Number	Connector Type	Cable RG-/U	Cable Attachment		Hex Crimp Data			a	b	c	CTL Series Tool #	Die Set for Tool 227-944
			Outer	Inner	Cavity for Outer ferrule	Cavity for End of Ferrule	Cavity for Center Contact					
83-58DCP-2	UHF Plug	58	Crimp	Crimp	.260(6.60)	.210(5.33)	.052(1.32) sq.	1.23(31.3)	.791(20.2)	.25(6.35)	—	227-1350
83-58DCP-2RFX	UHF Plug	58	Crimp	Crimp	.255(6.5)	.213(5.4)	.068(1.7)	1.12(28.4)	.685(17.4)	.236(5.99)	CTL-1	227-1221-11,-13

Step 1

Step 1 Strip cable to dimensions shown. Slide ferrule and coupling nut over cable jacket and flair braid slightly as shown.

Step 2

Step 2 Slide body assembly into place so inner ferrule portion slides under braid. Braid must butt back of body. Slide coupling nut forward. Slide ferrule over braid until it butts against body.

Step 3

Step 3 Using tools indicated in table above:
 (1) crimp center contact
 (2) crimp outer ferrule to braid
 (3) crimp outer ferrule to cable jacket

FCP® TERMINATION FOR PLUGS 83-58FCP, 83-58FCP-RFX on RG-58

Amphenol Number	Connector Type	Cable RG-/U	Tools	Stripping Dimensions, inches (mm)		
				a	b	c
83-58FCP	FCP Plug	58	Pliers & Fiber Grommet in Bag	1.00(25.4)	.812(20.6)	.500(12.7)
83-58FCP-RFX	FCP Plug	58	Pliers & Fiber Grommet in Bag	.673(17.0)	.547(14.0)	.236(6.0)

Step 1

Step 1 Strip cable to dimensions shown in table.

Step 2

Step 2 Slide ferrule and coupling nut over cable. Flair braid slightly. Insert body under flared braid until shoulder is against cable jacket.

Step 3

Step 3 Slide nut onto body. Grasp cable. Push ferrule over barb and up against body. Crimp tip of center contact with pliers, or if you prefer, solder. Then trim center conductor even with end of contact.

HOODS FOR ADAPTING PANEL RECEPTACLES TO COAXIAL CABLES

83-1H (UG-106/U) for RG-8, 10, 11, 12, 63, 79, 115, 149, 213, 215
 83-765 (UG-177/U) for RG-58, 141

Amphenol Number	Connector Type	Cable RG-/U	Cable Attachment		Stripping Dimensions		
			Outer	Inner	a	b	c
83-1H	Hood	8, 10, 11, 12, 63, 79, 115, 149, 213, 205	Solder	Solder	.625(15.8)	.500(12.7)	.312(7.92)
83-765	Hood	58, 141	Solder	Solder	.750(19.0)	.687(17.4)	.312(7.92)

Step 1

Step 1

Strip cable to dimensions shown. Do not nick center conductor. Tin exposed braid and center conductor.

Step 2

Step 2

Slide hood over braid. When using double-braided cable, hood goes over inner braid only. Then, in step 3, solder outer braid to outside of hood. Solder Center Conductor into solder cup terminal.

Step 3

Step 3

Slide hood flush against receptacle and tack-solder hood flange to receptacle flange. Solder hood to braid as shown. Use tape or tubing over section shown.

2-PIECE CRIMP PLUGS

Amphenol Number	Connector Type	Cable RG-/U	Hex Crimp Data			Stripping Dimensions, inches (mm)			
			Cavity for Outer Ferrule	Die Set for Tool 227-944*	CTL Series Tool Number	a	b	c	d

▲ Not supplied with part number 36250

Step 1

Step 1 Place nut, washer and gasket (with "V" groove toward open end of cable) over cable, and cut off jacket to dim. **a**.

Step 2

Step 2 Comb out braid and fold out. Bare center conductor to dim. **c** as shown.

Step 3

Step 3 Pull braid wires forward and taper toward center conductor. Place clamp over braid and push back against cable jacket.

Step 4

Step 4 Fold back braid wires as shown, trim braid to proper length and form over clamp as shown. Tin center conductor and solder on contact.

Step 5

Step 5 Insert cable and parts into connector body. Make sure sharp edge of clamp seats properly in gasket. Tighten nut.

RIGHT ANGLE JACKS FOR SEMI-RIGID CABLE

Amphenol Number	A
82-6096-RFX	.138 (3.5)
82-6097-RFX	.138 (3.5)
82-6162	.138 (3.5)
82-6098-RFX	.138 (3.5)
82-6099-RFX	.138 (3.5)
82-6163-RFX	.138 (3.5)
82-5955-RFX	.098 (2.5)
82-5956-RFX	.138 (3.5)
82-6124	.157 (4.0)

Step 1 All parts of the connector are shown.

Step 2 Strip the inner conductor, dielectric, and jacket as per "RECOMMENDED CABLE STRIPPING DIM'S" in catalog.

Step 3 Slide the INSULATOR onto inner conductor against the jacket. Then insert inner conductor into the CONTACT PIN and solder it as shown.

Step 4 Slide the SOLDER NUT onto cable.

Step 5 Insert cable and parts into the MAIN BODY, then screw the SOLDER NUT until it is tight and solder it as shown.

Assembly Instructions Insulated Twinax Plug

82-GB635-CR

Dim	w/ Cable Restraint	w/o Cable Restraint
A	.550 (13,97)	.550 (13,97)
B	.190 (4,83)	.190 (4,83)
C	.240 (6,10)	.170 (4,32)

Step 1 Remove clamp nut, braid clamp, sleeve and cable restraint if supplied.

Step 2 Prepare cable, see dimensions.

Step 3 Solder contacts.

Step 4 Assemble as shown.

Step 1

Step 1

Strip cable jacket, braid, and dielectric to dimensions shown. All cuts are to be sharp and square. **Important:** Do not nick braid, dielectric, and center conductor. Tinning of center conductor is not necessary if contact is to be crimped. For solder method, tin center conductor avoiding excessive heat.

Step 2

Step 2

Slide outer ferrule onto cable as shown. Flare slightly end of cable braid as shown to facilitate insertion of inner ferrule. **Important:** Do not comb out braid. Place contact on cable center conductor so it butts against cable dielectric. Center conductor should be visible through inspection hole in contact. Crimp or solder contact in place as follows:

Crimp Method: Use Die Set Cavity for contact indicated in table above. **Solder Method:** Soft solder contact to cable center conductor. Do not get any solder on outside surface of contact. Avoid excessive heat to prevent swelling of dielectric.

Step 3

Step 3

Install cable assembly into body assembly so inner ferrule portion slides under braid. Push cable assembly forward until contact snaps into place in insulator. Slide outer ferrule over braid and up against connector body. Crimp outer ferrule using Die Set Cavity specified in table above.

Assembly Instructions-C12

Triax BNC, 180° Polarity

31-4774-3

Step 1 Cut off end of cable square and remove jacket as shown. Do not nick braid.

Step 2 Comb out braid.

Step 3 Taper braid, slide nut over jacket. Slide washer 'A' over braid.

Step 4 Cut braid to dim. Shown. Do not nick inner jacket.

Step 5 Flare braid. Trim if necessary. Slide washer 'B' over inner jacket. Push firmly against braid and washer 'A'.

Step 6 Slide gasket over inner jacket. Push firmly into place. Trim inner jacket to dim. Shown. Do not nick braid.

(Continued on next page)

Step 7 Taper braid, slide Teflon washer over inner jacket. Slide washer 'C' over braid. Push firmly into place.

Step 8 Cut inner braid to dim. Shown. Do not cut into dielectric.

Step 9 Flare braid. Trim if necessary. Slide washer 'D' over dielectric. Push firmly into place.

Step 10 Cut dielectric and center contact to dimensions shown. Do not nick center conductor.

Step 11 Solder contact to center conductor. Remove excess solder. Do not overheat.

Step 12 Insert completed cable hardware into inner insulator 'E', inner body 'F', and outer insulator 'G'. Now insert completed assy. into either jack or plug body. Tighten with wrench. Do not rotate body or cable.

NOTE: Tighten with wrench to 20-24 in. lbs.

Assembly Instructions-C13 Triax BNC, TNC Threaded, 7/16-28

Note: For alternate Assembly instructions see sheet page 288

Step 1 Cut off end of cable square and remove jacket to dim. Shown. Do not nick braid.

Step 2 Comb out braid.

Step 3 Taper braid, slide nut, gasket, and clamp over tapered braid making sure inner shoulder of clamp is positioned tightly against end of jacket.

Step 4 Trim braid to dim. Shown.

Step 5 Flare back braid over clamp.

Step 6 Place part (4) and part (5) in position shown. Remove inner jacket to dim. Shown.

Step 7 Comb out inner braid.

(Continued on next page)

Assembly Instructions-C13

Triax BNC, TNC Threaded, 7/16-28 (continued)

Step 8 Taper braid, slide clamp part (6) over tapered inner braid making sure inner shoulder of clamp is positioned tightly against end of inner jacket.

Step 9 Fold back inner braid over clamp and trim inner braid to dim. Shown.

Step 10 Place small bushing part (7) in position shown. Push firmly against braid.

Step 11 Trim dielectric to dim. Shown. Do not nick inner conductor.

Note: For assemblies 00-8354-4, 00-8354-5, 00-8470-2 and 00-8470-3 only, trim to 1/16 in lieu of 5/64, then assemble insulating washer.

Step 12 Trim inner conductor to dim. Shown.

Note: For assemblies 00-8354-4, 00-8354-5, 00-8470-2 and 00-8470-3 only, trim inner conductor to 5/64 with insulating washer assembled.

Step 13 Solder contact on inner conductor. Remove excess solder. Do not overheat dielectric as it will distort and will not enter insulator properly.

Step 14 Insert completed cable hardware assy. into either Jack or Plug body. Make sure part (2) is properly seated on sharp edge of part (3). After nut is started, tighten with torque wrench to 13 to 15 in. lbs.

Note: Sharp edge of clamp part (3) must split gasket part (2).

ALTERNATE ASSEMBLY INSTRUCTIONS

Gasket (Part #2), Clamp (Part #3) & Bushing (Part #4) is replaced by washer (Part #12).

Step 1A Cut off end of cable square and remove jacket to dim's shown. Do not nick braid.

Step 2A Comb out braid.

Step 3A Taper braid, slide washer over braid and jacket.

Step 4A Trim braid to dim shown.

Step 5A Flare back braid to face of washer, and place gasket in position shown.

Step 6A Remove inner jacket to dim shown.

Continue as per inst. #7 of sheet page 72

Assembly Instructions-C15

Triax Threaded, 7/8-20 and 11/16-24

■ for 34400 and 34375 Jacks this dimension is .130 (3.3)

Δ for 53100 and 53150 Plugs this dimension is .187 (4.5)

Step 1 Slide nut, washer and gasket over cable. Cut off outside jacket (using razor blade or wire strippers) to dimension a. Make a clean cut, being very careful not to nick braid. Cut first braid to dimension b.

Step 2 Slide first braid clamp over braid up to jacket of cable. Fold first braid back over clamp, making sure braid is evenly distributed over the surface of the clamp. Trim second jacket to dimension c, again being very careful not to nick braid.

Step 3 Trim second braid to dimension d. Slide on outer ground washer insulator and second braid clamp. Fold second braid back over braid clamp, again making sure that braid is evenly distributed over surface of clamp.

Step 4 Trim cable dielectric to dimension e.

Step 5 Tin the inside hole of the contact. Tin wire and insert into contact and solder. Remove any excess solder. Be sure cable dielectric is not heated excessively and swollen so as to prevent dielectric from entering body of fitting.

Step 6 Plug only: Place front insulator and outer contact assembly into back of connector body and push into proper place. Insert cable-contact assembly into body. Screw nut into body with wrench until moderately tight.

**Stripping dims. ±1/64 inches
(0.4 millimeters)**

Plugs	58A, 59 Type	8, 11 Type

Assembly Instructions-C16

C - Two-Stud Bayonet Lock

CLAMP NUT

CLAMP GASKET

BRAID CLAMP

FEMALE CONTACT

JACK BODY

MALE CONTACT

PLUG BODY

Slide nut and gasket over cable and cut jacket to dimension **a**.

Comb out braid and fold out. Cut cable dielectric to dimension **b**.

Pull braid wires forward and taper toward center conductor. Place clamp over braid and push back against cable jacket.

Fold back braid wires as shown, trim to proper length and form over clamp as shown. Solder contact to center conductor. Dimension **d** should be as shown.

Insert cable and parts into connector body. Make sure sharp edge of clamp seats properly in gasket. Tighten nut. End of contact in plug should be flush with insulator. There should be a clearance of .010" (.25mm) between end of contact and insulator in jack.

Stripping dims. ±1/64 (0.4) inches (millimeters)

Amphenol Part #	a	b	c	d (ref)
82-530	9/32 (7.1)	1/8 (3.2)	5/32 (4.0)	3/64 (1.2)
82-532	19/23 (15.1)	7/16 (11.1)	5/32 (4.0)	11/32 (8.7)

- For armored cable slide cap over armor first. Push armor and cap back out of way and proceed with assembly as directed above using armor clamp in place of standard clamp nut. When assembly is complete, straighten bulge in armor and trim so that it can be clamped between nut and cap.

Assembly Instructions-C17

HN - Typical Clamp

Stripping dims. inches (millimeters)

Amphenol Part #	a	b	c
82-804	1.00 (25.4)	.781 (19.8)	.219 (5.6)
82-856	.680 (17.3)	.34 (8.6)	.09 (2.3)
82-324	1.59 (40.4)	.875 (22.2)	.718 (18.2)

Place nut, gland, and gasket, with "V" groove toward nut, over cable and strip cable to dimensions as shown in table.

Comb out braid and fold out.

Pull braid wires forward and taper toward center conductor. Place clamp over braid and push back against cable jacket.

Fold back braid wires as shown, trim to proper length and form over clamp as shown. Solder contact to center conductor.

Insert cable and parts into connector body, make sure sharp edge of clamp seats properly in gasket. Tighten nut.
Recommended Torque: 35-40 in lbs.

Assembly Instructions-C18

HN - Typical Clamp

Stripping dims. inches (millimeters)

Amphenol Part #	a	b	c
16750	.799 (20.2)	.594 (15.1)	.203 (5.8)
82-816-1000	.843 (21.4)	.625 (15.9)	.218 (5.5)

Push nut, washer and gasket over cable jacket.

Cut cable even to dimensions shown in table.

Push clamp over copper braid, flush against cable jacket. Cut exposed copper braid so that approximately 3/16 remains and fan over clamp. Trim braid even with end of taper. Cut cable dielectric (dim c) from end of cable cut. Tin exposed conductor.

Solder contact pin to conductor. Do not overheat dielectric. Do not use excess solder. Wipe clean; see that dielectric is free from solder, resin and foreign material. Tighten nut to recommended torque 35-40 in lbs securely with wrench.

CLAMP PLUGS

Step 1 Slide clamp nut and clamp gasket over cable end. V-groove in clamp gasket faces toward connector body. Strip cable to dimensions shown. **Important:** Do not nick insulation around center conductors. For solid core cables, lay braid back out of way while trimming core; then lay braid down again to facilitate Step 2.

Step 2 Slide braid clamp over braid until inner shoulder butts against jacket. (Note: sharp edge of braid clamp goes toward V-groove in clamp gasket.) Fold braid back evenly over braid clamp as shown.

Step 3 Slide sleeve over cable so that braid bottoms inside sleeve. Solder contacts to conductors, using minimum heat. Remove any excess solder. Alternative method: Crimp center contacts using CTL Series tool number CTL-4 cavities B & C; or by using Die Set 227-1414 cavities B & C in tool frame 227-944 or in Pneumatic Crimp Tool 227-60. Bend conductors and contacts out and back to obtain .250(6.4) spacing between contacts.

Step 4 Insert contacts into rear of insulator. (Note: for Belden 9207 and similar solid core cables, contact on bare copper conductor [or for Belden 8227 and similar air dielectric cables, the contact on white insulated conductor] goes into hole with dot next to it.) Slide insulator to butt against sleeve as shown.

Step 5 Insert assembly into connector body, aligning slot of insulator with polarizing key in body. Tighten clamp nut to 50 lbf-in.(5.7 N·m) torque. Do not twist connector body.

Assembly Instructions-C20

HN - Typical Clamp

Cut end of cable even. Push nut, washer and gasket over cable jacket.

Stripping dims. inches (millimeters)

Amphenol Part #	a	b	c
82-38	1.0 (25.4)	.781 (19.8)	.219 (5.6)

Remove vinyl jacket .798" (20.3) from end of cable. For double shield cables, remove vinyl jacket 1 3/16" (30.2) from end of cable.

Push clamp over copper braid, flush against cable jacket. Cut exposed copper braid so that approximately .219" (5.6) remains and fan over clamp. Trim braid even with end of taper. Cut cable dielectric to Dim c.

Solder contact pin to conductor. Do not overheat dielectric. Do not use excess solder. Wipe clean; see that dielectric is free from solder, resin and foreign material.

Taper dielectric with AMPHENOL 103-301 (MX-103/U) trimming tool. When tapering dielectric of cable for plug assembly, push contact stop of tool to bottom of slot. Tool will stop cutting when shoulder of contact butts against stop. Cable will be properly tapered when end of center contact is flush with end of trimmer body.

Apply small amount of Dow Corning DC-4 Silicone Compound or equivalent (per MIL-S-8660) on tapered surface of dielectric. Insert assembly into connector body. Tighten nut securely with wrench.

Amphenol Number	Connector Type	Cable RG-/U	Hex Crimp Data			CTL Series Tool Number	Stripping Dimensions, inches (mm)

82-4454	Bulkhead Jack	214, 225, 393	.100 (2.5)	.213 (5.4)	227-1221-57	CTL-3, -5	.687 (17.5)	.500 (12.7)	.406 (10.3)

Strip cable jacket, braid, and dielectric to dimensions shown. $\pm .010$ (.25). All cuts are to be sharp and square. Important: Do not nick braid, dielectric, and center conductor. Tinning of center conductor is not necessary if contact is to be crimped. For solder method, tin center conductor avoiding excessive heat. Slide outer ferrule onto cable as shown.

Flare slightly end of cable braid as shown to facilitate insertion onto inner ferrule. Important: Do not comb out braid.

Place contact on cable center conductor so that it butts against cable dielectric. Center conductor should be visible through inspection hole in contact. Crimp contact in place using tool handle and die cavity shown in table above or soft solder per QQ-5-571 COMP SN60.

Do not get any solder on outside surfaces of contact. Avoid excessive heat to prevent swelling of dielectric.

Install cable assembly into body assembly so that inner ferrule portion slides under braid. Push cable assembly forward until contact snaps into place in insulator. Slide outer ferrule over braid and up against connector body. Crimp outer ferrule using tool handle and die set cavity shown in table above.

Step 1

Step 1 Place ferrule on cable as shown. Strip cable to dimensions in table listed above.

Step 2 Crimp center contact to cable using tools listed in table above.

Step 2

Step 3 Assemble body to cable. Contact must snap in place. Slide ferrule over braid and crimp using tools listed in table above.

Step 3

Assembly Instructions-C23 Triax C Bayonet Lock

Step 1

Step 1 Cut off end of cable and remove jacket to dim. shown. Do not nick braid.

Step 2

Step 2 Comb out braid.

Step 3

Step 3 Taper braid, slide nut, gasket and clamp over tapered braid making sure inner shoulder of clamp is positioned tightly against end of jacket.

Step 4

Step 4 Trim braid to dim. shown.

Step 5

Step 5 Flare back braid over clamp.

Step 6

Step 6 Place part (4) and part (5) in position shown. Remove inner jacket to dim. shown.

Step 7

Step 7 Comb out inner braid.

Step 8

Step 8 Taper braid, slide clamp part (6) over tapered inner braid making sure inner shoulder of clamp is positioned tightly against end of inner jacket.

Step 9

Step 9 Fold back inner braid over clamp and trim inner braid to dim. shown.

Step 10

Step 10 Place small bushing part (7) in position shown. Push firmly against braid.

Step 11

Step 11 Trim dielectric to dim. shown. Do not nick inner conductor.

Step 12

Step 12 Trim inner conductor to dim. shown.

Step 13

Step 13 Solder contact on inner conductor. Remove excess solder. Do not overheat dielectric as it will distort and will not enter insulator properly.

Step 14

Step 14 Insert complete cable hardware assembly into either Jack or Plug body. Make sure part (2) is properly seated on sharp edge of part (3). After nut is started, tighten with torque wrench to 25 ± 5 in. lbs.

Note: Sharp edge of clamp part (3) must split gasket part (2)

31-3302	BNC Plug	59, 62, 71, 140, 210	.250(6.4)	.094(2.4)

▲ For angle plugs only: (except 31-204) Solder center conductor to preassembled contact. Assemble cap and lightly punch center of cap for retention in body, or solder in place.

- Step 1** Place nut, washer (when supplied) and gasket over cable and strip jacket to dimension **a** shown in table above.
- Step 2** Comb out braid and fold out. Trim insulation off center conductor to dimension **c** shown in table above. [For RG-62, 71 and 210/U cable, trim an additional .032"(0.8mm) of insulation off center conductor and add bushing.] Tin center conductor.
- Step 3** Pull braid wires forward and taper toward center conductor. Place clamp over braid and push back against cable jacket.
- Step 4** Fold back braid wires as shown, trim to proper length [approximately .125" (3.2mm) long] and form over clamp as shown. Braid wire should not extend beyond step of braid clamp. Solder contact to center conductor, sliding bushing first (when supplied) over center conductor. ▲
- Step 5** Insert cable and parts into connector body. Make sure sharp edge of clamp seats properly in gasket. Tighten nut to approximately 15 inch pounds.

Assembly

31-5800	BNC Plug	58, 141, PL-58	.068(1.7)	.213(5.4)	227-1221-11	CTL-1	.593(15.1)	.250(6.4)	.156(4.0)
31-5900	BNC Plug	59, 62, 59 (20GA CC), Plenum -59, 62	.068(1.7)	.255(6.5)	227-1221-13	CTL-1	.593(15.1)	.250(6.4)	.156(4.0)

Step 1 Strip cable jacket, braid, and dielectric to dimensions in table above. [for RG-62,71,210/U cable, trim an additional .039"(1.0mm) of insulation off center conductor and add bushing] All cuts are to be sharp and square. Important: Do not nick braid, dielectric, and center conductor. Slide outer ferrule onto cable as shown.

Step 2 Flare slightly end of cable braid as shown to facilitate insertion of inner ferrule. Important: Do not comb out braid ▲. Place contact on cable center conductor so that it butts against cable dielectric. Crimp contact in place using Die Set Cavity indicated in table above. When using RG-62, 71, 210 cable, install bushing over center conductor before installing contact.

Step 3 Install cable assembly into body assembly so that inner ferrule portion slides under braid. Push cable assembly forward until contact snaps into place in insulator. Slide outer ferrule over braid and up against connector body. Crimp outer ferrule using Die Set Cavity specified in table above.

▲ For RG-174, 179, 187, 188, 316/U cables only, slit jacket back .100"(2.5mm) as shown. Before attaching center contact, slide metal spacer/TFE sleeve (not shown) over cable dielectric and under braid. The center contact should butt against the dielectric and TFE sleeve.

* for pneumatic crimp tool 227-60, use die sets indicated in this column.

▲ For RG-174, 179, 187, 188, 316/U cables only, slit jacket back .100"(2.5mm) as shown. Before attaching center contact, slide metal spacer/TFE sleeve (not shown) over cable dielectric and under braid. The center contact should butt against the dielectric and TFE sleeve.

Step 1 Strip cable jacket, braid, and dielectric to dimensions in table above. [for RG-62,71,210/U cable, trim an additional .039"(1.0mm) of insulation off center conductor and add bushing] All cuts are to be sharp and square. Important: Do not nick braid, dielectric, and center conductor. Slide outer ferrule onto cable as shown.

Step 2 Flare slightly end of cable braid as shown to facilitate insertion of inner ferrule. Important: Do not comb out braid ▲. Place contact on cable center conductor so that it butts against cable dielectric. Crimp contact in place using Die Set Cavity indicated in table above. When using RG-62, 71, 210 cable, install bushing onto center conductor before installing contact.

Step 3 Install cable assembly into body assembly so that inner ferrule portion slides under braid. Push cable assembly forward until contact snaps into place in insulator. Slide outer ferrule over braid and up against connector body. Crimp outer ferrule using Die Set Cavity specified in table above.

* for pneumatic crimp tool 227-60, use die sets indicated in this column

ORIGINAL CRIMP PLUGS

Amphenol Number	Connector Type	Cable RG-/U	Hex Crimp Data			Stripping Dimensions, inches (mm)		
			Cavity for Contact	Cavity for Outer Ferrule	Die Set for Tool 227-944*	a	b	c
31-351	BNC Plug	58, 141	—	.213(5.4)	227-1221-11	.922(23.4)	.516(13.1)	.250(6.3)
31-359	BNC Plug	59, 62, 140	—	.255(6.5)	227-1221-13	.922(23.4)	.516(13.1)	.250(6.3)
31-371	BNC Plug	174, 179, 187, 188, 316	—	.128(3.2)	227-1221-3	.797(20.2)	.516(13.1)	.250(6.3)

- Step 1** Install boot and slide outer ferrule onto cable as shown prior to stripping cable.
- Step 2** Strip cable jacket, braid and dielectric to dimensions shown. See attached table for dimensions. All cuts are to be sharp and square. Important: DO NOT nick braid, dielectric, and center conductor when cutting. Tin center conductor using soft solder per QQ-S-571 comp Sn 60. Avoid excessive heat while tinning to prevent swelling of cable dielectric.
- Step 3** Slightly flare out end of cable braid as so as to facilitate insertion onto ferrule clamp nut assembly. Important: DO NOT comb out braid.
- Step 4** Install ferrule clamp nut assembly onto cable so that ferrule portion slides under braid and insulator butts flush against cable dielectric. Slide outer ferrule over braid and up against nut. Make sure no slack exists in braid. Crimp outer ferrule with tool specified in table above, keeping cable dielectric bottomed against insulator.
- Step 5** Soft solder center conductor to contact using rosin core per QQ-S-571 comp Sn 60. DO NOT get any solder on outside surfaces of contact.
- Step 6** Screw connector body onto prepared cable termination . Wrench tighten by holding the cable nut assembly STATIONARY while ROTATING the connector body.
- Step 7** Push body forward and into position as shown to complete assembly.

* for pneumatic crimp tool 227-60, use die sets indicated in this column

SURETWIST® PLUG

BNC SURETWIST® plug

Amphenol Number	Connector Type	Cable RG-/U
31-5136	BNC Plug	59
31-5136-RFX	BNC Plug	59
31-5137	BNC Plug	58
31-5137-RFX	BNC Plug	58

Step 1

Step 1 Strip cable as shown. Take care not to nick center conductor or outer braid.

Step 2

Step 2 Twist outer braid in a clockwise direction so that at least 1/32" of cable dielectric is bared, and braid is left flat. (Stray or loose braid can cause shorts.)

Step 3

Step 3 Gently insert center conductor into back end of connector, "feeling" it into the guide hole. (If center conductor is NOT properly in place, about 1/8" of center conductor will show at the back end. Reinsert until cable dielectric reaches position shown in illustration.)

Step 4

Step 4 Push the cable firmly home (as far as possible). Then screw the connector onto the cable in a clockwise direction until it stops. Assembly is complete.

QUICKTRIM® PLUG

Amphenol Number	Connector Type	Cable RG-/U	Center Contact Affixment		
			Hex Size	Die Set for Tool 227-944*	CTL Series Tool Number
31-4541	BNC Plug	59, 59A, 62, 62A	.068(1.7)	227-1221-13 Cavity B	CTL-1
31-4541-RFX					
31-4542	BNC Plug	Belden 9268 Montrose CBL-5098			
31-30220-1	BNC Plug	58			
31-30220-8	BNC Plug	223			

Step 1A For all connectors except 31-4541-RFX (see step 1B). Slide clamp nut over cable. Strip cable to dimension shown. Cut braid and dielectric square. Do not nick center conductor.

Step 1B For 31-4541-RFX.. Same as step 1A except use Step 1B strip dimensions, and then slit jacket back .125"(3.2 mm) in four places 90° apart as shown in illustration.

Step 2 Slide contact assembly under braid and jacket until braid butts as shown. Use caution that braid slides over contact assembly and not inside of it. Be sure center conductor is visible through side hole of contact. Solder contact to center conductor. Contact may be crimped on applicable connectors using Amphenol CTL-1 crimp tool; or by using die set 227-1221-13 cavity B in tool frame 227-944 or equivalent tool.

Step 3 Insert into connector body.

Step 4 Tighten clamp nut to a torque of 35 lbf-in.

* for pneumatic crimp tool 227-60, use die sets indicated in this column

PLUGS FCP TERMINATION

Amphenol Number	Connector Type	Cable RG-/U
31-4700	BNC Plug	58, 141
31-4702	BNC Plug	59

Step 1 Slide ferrule over cable end, slotted end first. Strip cable to dimensions shown. Do not nick center conductor. Flare braid slightly as shown.

Step 2 Tin exposed center conductor. Solder center contact on center conductor. Use minimum heat to avoid damaging cable insulation. Remove any excess solder and flux from contact surface. Contact may be crimped using 227-1221-11 die set (cavity B) .068 hex in tool handle 227-944 or equivalent tool.

Step 3 Slide body over contact and cable insulation with barb going UNDER flared braid. Push body until shoulder is against cable jacket. Braid will flare out against body shoulder.

Step 4 Grasp cable with hand and push ferrule over barb until braid is captured between ferrule and body flange. Assembly is complete.

Assembly

Step 1

■ ▲ For RG-174, 179, 187, 188, 316/U cables only, slit jacket back .100"(2.5mm) as shown. Before attaching center contact, slide TFE sleeve (not shown) over cable dielectric and under braid. The center contact should butt against the dielectric and TFE sleeve.

Step 1 Slide outer ferrule over cables shown. Flare slightly end of cable braid as shown to facilitate insertion of inner ferrule. **IMPORTANT:** Do not comb out braid.

Step 2

Step 2 Place contact onto center conductor so it butts against cable dielectric. Crimp contact in place.

Step 3

Step 3 Install cable assembly into body assembly so inner ferrule slides over sleeve and under braid. Push cable assembly forward until contact seats in insulator. Slide outer ferrule over braid and up against connector body. Crimp outer ferrule.

▲ use die set 227-1448 with tool frame 227-944

CRIMP TERMINATION FOR TYPE 2 – 75Ω CONNECTORS

◆ for use on RG-62, 71, 210 cable only

31-71066	75Ω BNC Plug	Quad Shield 59	.068(1.7)	.263(6.7)	227-1221-15	—	.593(15.1)	.250(6.4)	.156(4.0)

Step 1

■▲ For RG-174, 179, 187, 188, 316/U cables only, slit jacket back .100" (2.5mm) as shown. Before attaching center contact TFE sleeve (not shown) over cable dielectric and under braid. For 31-71016, before attaching center contact. Slide metal spacer/TFE sleeve (not shown) over cable dielectric and under braid. The center contact should butt against the dielectric and TFE sleeve.

Step 2

Step 3

Step 1

Strip cable jacket, braid, and dielectric to dimensions in table above. [for RG-62,71,210/U cable, trim an additional .039" (1.0mm) of insulation off center conductor and add bushing] All cuts are to be sharp and square. Important: Do not nick braid, dielectric, and center conductor. Slide outer ferrule onto cable as shown.

Step 2

Flare slightly end of cable braid as shown to facilitate insertion of inner ferrule. Important: Do not comb out braid. Place contact on cable center conductor so that it butts against cable dielectric. Crimp contact in place using Die Set Cavity indicated in table above. When using RG-62, 71, 210, install bushing over center conductor before installing contact.

Step 3

Install cable assembly into body assembly so that inner ferrule portion slides under braid. Push cable assembly forward until contact snaps into place in insulator. Slide outer ferrule over braid and up against connector body. Crimp outer ferrule using Die Set Cavity specified in table above.

* for pneumatic crimp tool 227-60, use die sets indicated in this column

CLAMP PLUGS

Step 1

Step 1 Cut end of cable sharp and square. Slide clamp nut, washer and clamp gasket over jacket. Strip jacket to dimension shown. Comb out braid and fold out. Bare conductors to dimension shown.

Step 2

Step 2 Pull braid forward and taper toward conductors. Slide braid clamp over braid as shown and push against cable jacket.

Step 3

Step 3 Fold back braid, trim to proper length so no braid strands extend beyond shoulder of braid clamp and evenly form over braid clamp as shown. Slide on bushing. Tin center conductors using minimum amount of heat.

Step 4

Step 4 Bend connectors out as necessary for alignment and slide on rear insulator. Solder contacts. Remove any excess solder from contact O.D.

Step 5

Step 5 Slide front insulator over contacts and butt against contact shoulders as shown.

Step 6

Step 6 Insert prepared cable termination into connector body. Make sure sharp edge of braid clamp seats properly in V-groove clamp gasket. Tighten securely, turning nut only. Do not twist connector body.

CLAMP TYPES

Amphenol Number	Conn. Type	Cable	Stripping Dimensions, In.(mm)	
			a	c
79075	TNC Angle Plug	RG-58	.281(7.1)	.109(2.8)
79875	TNC Plug	RG-58	.281(7.1)	.109(2.8)
79600	TNC Jack	RG-58	.300(7.5)	.110(2.8)

Step 1 Place nut, washer (when supplied) and gasket over cable and strip jacket to dimension **a** shown in table above.

Step 2 Comb out braid and fold out. Trim insulation off center conductor to dimension **c** shown in table above. Tin center conductor. Pull braid wires forward and taper toward center conductor. Place clamp over braid and push back against cable jacket.

Step 3 Fold back braid wires as shown, trim to proper length [.125" (3.2mm)] and form over clamp as shown. Solder contact to center conductor.

Step 4 Insert cable and parts into connector body. Make sure sharp edge of clamp seats properly in gasket. Tighten nut.

Step 1

■ ▲ For RG-174, 179, 187, 188, 316/U cables only, slit jacket back .100"(2.5mm) as shown. Before attaching center contact, slide metal spacer/TFE sleeve (not shown) over cable dielectric. The center contact should butt against the dielectric and TFE sleeve.

Step 1

Strip cable jacket, braid, and dielectric to dimensions in table above. All cuts are to be sharp and square. Important: Do not nick braid, dielectric, and center conductor. Slide outer ferrule onto cable as shown.

Step 2

contact must butt against cable dielectric

Step 2

Flare slightly end of cable braid as shown to facilitate insertion of inner ferrule. Important: Do not comb out braid. Place contact on cable center conductor so that it butts against cable dielectric. Crimp contact in place using Die Set Cavity indicated in table above.

Step 3

outer ferrule should butt here
 cable dielectric must butt insulator

Step 3

Install cable assembly into body assembly so that inner ferrule portion slides under braid. Push cable assembly forward until contact snaps into place in insulator. Slide outer ferrule over braid and up against connector body. Crimp outer ferrule using Die Set Cavity in table above.

QUICKTRIM® PLUG

Amphenol Number	Cable RG-/U	Center Contact Affixment		
		Hex Size	Die Set for Tool 227-944	CTL Series Tool Number
31-5061	59, 59A, 62, 62A	.068(1.7)	227-1221-13 Cavity B	CTL-1

Step 1A

Step 1A For all cables listed, except Plenum 62. Slide clamp nut over cable. Strip cable to dimension shown. Cut braid and dielectric square. Do not nick center conductor.

Step 1B

Step 1B For Plenum 62 (IBM 4885584). Same as step 1A, and then slit jacket back .125"(3.2 mm) in four places 90° apart as shown in illustration.

Step 2

Step 2 Slide contact assembly under braid and jacket until braid butts as shown. Use caution that braid slides over contact assembly and not inside of it. Be sure center conductor is visible through side hole of contact. Crimp contact to conductor using Amphenol CTL-1 crimp tool; or by using die set 227-1221-13 cavity B in tool frame 227-944.

Step 3

Step 3 Insert into connector body.

Step 4

Step 4 Tighten clamp nut to a torque of 35 lbf-in.

Crimp Types

Amphenol Number	Connector Type	Cable RG-/U	Hex Crimp Data				Stripping Dimensions, inches (mm)		
			Cavity for Contact	Cavity for Outer Ferrule	Die Set for Tool 227-944	CTL Series Tool No.	a	b	c
31-5677	RP-TNC Plug w/ socket contact	58	.068(1.7)	.213(5.4)	227-1221-11	CTL-1	.593(15.1)	.250(6.4)	.156(4.0)

31-6033	TNC RP Plug	B8214,9913	.118 (3.0)	.429 (10.9)	227-1221-61	CTL-11	.639 (16.2)	.312 (7.9)	.158 (4.0)

Step 1

Step 1a

Step 2

Step 3

Step 1 Strip cable jacket, braid, and dielectric to dimensions in table above. All cuts are to be sharp and square. Important: Do not nick braid, dielectric, and center conductor. Slide outer ferrule onto cable as shown.

Step 1a For **31-5685** & **31-5686** only, slide metal spacer over exposed braid until it butts against cable jacket. Fold braid back over spacer, making sure to smooth out braid over spacer. Slide TFE sleeve over end of cable dielectric, positioning it flush with end of dielectric.

Step 2 For all P/Ns place contact on cable center conductor so that it butts against cable dielectric. Crimp contact in place using Die Set Cavity in table above. For all P/Ns except 31-5685 & 31-5686, flare slightly end of cable braid as shown to facilitate insertion of inner ferrule. Important: Do not comb out braid.

Step 3 For all P/Ns except 31-5685 & 31-5686, install cable assembly into body assembly so that ferrule on body slides under braid. Push cable assembly forward until contact snaps into place in insulator. Slide crimp ferrule over braid and up against connector body. Crimp outer ferrule using Die Set Cavity in table above.

Step 3a For **31-5685** & **31-5686**, slide cable assembly into body until it clicks into place. Crimp on the end of the body using Die Set cavity in table above.

CRIMP-CRIMP TYPE

Number	Connector Type	Cable RG-/U	Amphenol inches (mm)			Strip Dimensions, Crimp Data			
			a	b	c	Cavity for Contact	Cavity for Outer Ferrule	Die Set for Tool 227-944	CTL Series Tool Number
81-114-RFX	Mini-UHF Plug	B 9258	.629(16.0)	.302(7.7)	.157(4.0)	.068(1.7)	.255(6.5)	227-1221-13	CTL-1, -5, -6

81-116	Mini-UHF Jack	58	.500(12.7)	.219(5.5)	.219(5.5)	.052(1.3) Sq.	.213(5.4)	227-1409	CTL-5
81-182-RFX	Mini-UHF Jack	59	.625(15.9)	.299(7.6)	.236(6)	.068(1.7) Sq.	.255(6.5)	227-1221-13	CTL-1, -5, -6
81-183-RFX	Mini-UHF Jack	58/u58b/u	.661(16.8)	.334(8.5)	.118(3)	.068(1.7) Sq.	.213(5.4)	227-1221-11	CTL-1, -5, -6
81-181-RFX	Mini-UHF Plug	59	.937(23.8)	.610(15.5)	.492(12.5)	.068(1.7)	.255(6.5)	227-1221-13	CTL-1, -5, -6
81-196-RFX	Mini-UHF Plug	58C, 58	.937(23.8)	.610(15.5)	.492(12.5)	.068(1.7)	.213(5.4)	227-1221-11	CTL-1, -5, -6

Step 1

Step 1 Strip cable to dimensions shown in table. All cuts are to be sharp and square. **Important:** do not nick braid, dielectric, or center conductor.

Step 2

Step 2 Slide outer ferrule onto cable as shown. (For straight plugs, slide coupling nut onto cable, keeping the open end of the nut toward the stripped end of the cable.) Flare slightly end of cable braid as shown to facilitate insertion of inner ferrule. **Important:** Do not comb out braid. Place contact on cable center conductor so it butts against cable dielectric. Crimp contact in place using Tool Handle and Die Set Cavity shown in table above or soft solder per QQ-S-571 comp. Sn60.

Step 3

Step 3 Install cable assembly into body assembly so inner ferrule portion slides under braid. Push cable assembly forward until cable dielectric seats against connector insulator.

Step 4

Step 4 (For straight plugs, slide coupling nut forward over body assembly as shown.) Slide outer ferrule over braid and up against connector body, holding connector body firmly in place. Crimp outer ferrule using Tool Handle and Die Set Cavity shown in table above.

CLAMP TYPE FOR FLEXIBLE CABLES

Amphenol Number	Connector Type	Cable RG-/U	Stripping Dimensions, inches (mm)		
			a	b	c
901-103	SMA Plug	55, 58, 141, 142, 223	.265(7)	.140(3.5)	.094(2.5)

Step 1

Step 1 Place nut and gasket over cable. Strip cable to dimensions shown in cable. Comb out braid.

Step 2

Step 2 Place braid clamp over braid and push back against cable jacket. Fold back wires, trim as necessary so that wires do not touch shoulder of clamp. Cuts must be square. Do not nick center conductor.

Step 3

Step 3 Solder center contact to cable (SN60-40 rosin core solder recommended). Center contact must seat square against dielectric. Avoid excessive heat which may distort dielectric.

Step 4

Step 4 Thread connector assembly onto prepared cable assembly. Tighten to 20-25 in/lbs torque.

MODIFIED CLAMP TYPE FOR FLEXIBLE CABLES

clamp nut assembly

bushing - contact assembly

plug body assembly

Amphenol Number	Connector Type	Cable RG-/U	Stripping Dimensions, inches (mm)		
			a	b	c
901-128-11	SMA Plug	174, 316	.328(14)	—	.125(3.2)

Step 1

Step 1 Strip cable to dimensions shown in table. Cut must be square. Do not nick center conductor. Comb out braid.

Step 2

Step 2 Place clamp assembly over braid and push back against cable jacket. Fold back braid wires, trim as necessary so that wires do not touch shoulder of gasket.

Step 3

Step 3 (For angle connectors, skip to next step.) Assemble bushing assembly and solder center contact to cable (SN60-40 rosin core solder recommended.)

Step 4

Step 4 Thread connector assembly onto prepared cable assembly. Tighten to 20-25 in/lbs torque. For angle connectors, solder center conductor and cap in place.

SOLDER TYPE FOR FLEXIBLE CABLES

Amphenol Number	Connector Type	Cable RG-/U	Stripping Dimensions, inches (mm)		
			a	b	c
901-9501-3	SMA Plug	174, 179, 187, 188, 316	.440(11.2)	.130(3.3)	.090(2.3)
901-9521-3	SMA Angle Plug	174, 179, 187, 188, 316	.437(11.1)	.197(5.0)	.090(2.3)

Step 1

Straight connectors:

Step 2

Step 3

Angle connectors:

Step 2

Step 3

Step 1 Slide shrink tubing and ferrule up on cable as shown. Strip cable to dimensions shown in table. Flare cable braid.

Straight connectors:

Step 2 Solder center contact to cable center conductor as shown. Remove excess solder.

Note: Contact must bottom against cable dielectric.

Step 3 Install coupling nut and body assembly as shown. Press ferrule against body and solder. Place heat shrink tubing over body and apply heat.

Angle connectors:

Step 2 Place cable dielectric into body and press ferrule against body as shown. Solder center conductor to contact as shown.

Step 3 Bottom ferrule against body and solder as shown. Place cap into position and also solder as shown. Place heat shrink tubing over body and apply heat.

SOLDER TO BODY/PRESSFIT INSULATOR FOR SEMI-RIGID CABLE

Amphenol Number	Connector Type	Cable S/R	Dim a
901-9201-2A	SMA Plug	.085(2.2)	.125(3.2)
901-9201-2ASF	SMA Plug	.085(2.2)	.125(3.2)
901-9202-1A	SMA Jack	.141(3.6)	.125(3.2)
901-9202-2A	SMA Jack	.085(2.2)	.125(3.2)
901-9210-1	SMA Bulkhead Jack	.141(3.6)	.125(3.2)
901-9210-2	SMA Bulkhead Jack	.085(2.2)	.125(3.2)
901-9867-RFX	SMA Plug	.085(2.2)	.098(2.5)
901-9868-RFX	SMA Plug	.141(3.6)	.098(2.5)

Step 1

Step 1 Clean cable end for .625"(16mm) min. length. Trim cable jacket and dielectric to dimension shown. Do not nick center conductor. Remove burrs from jacket and center conductor.

Step 2

Step 2 Solder contact to center conductor. Use .015"(.4mm) shim to accurately maintain space between jacket, dielectric and contact. Remove all excess solder.

Step 3a,b

Step 3a Assemble cable and contact into connector body. Cable jacket and dielectric to be flush with shoulder of body as shown. Solder cable to connector body. Avoid excessive heat which may distort dielectric.

Step 3b Press fit insulator into connector body. Bottom insulator in connector body as shown.

SOLDER TO BODY/PRE-ASSEMBLED CENTER CONTACT FOR SEMI-RIGID CABLE

Step 1

Step 2

Amphenol Number	Connector Type	Cable S/R	Dim a
901-9723	SMA Plug	.085(2.2)	.125(3.2)
901-9723-10	SMA Plug	.085(2.2)	.125(3.2)
901-9805-HP	SMA Plug	.085(2.2)	.125(3.2)
901-9808	SMA Plug	.141(3.6)	.125(3.2)
901-9808-1	SMA Plug	.141(3.6)	.090(2.3)
901-9808-2	SMA Plug	.141(3.6)	.125(3.2)

Step 1 Clean cable end for .625"(16mm) min. length. Trim cable jacket and dielectric to dimension shown. Do not nick center conductor. Remove burrs from cable jacket. File blunt end of center conductor to a 90° cone.

Step 2 Assemble cable into connector body. Make sure center conductor is straight. Use care in pushing center conductor into spring contact. Make sure jacket bottoms in connector. Maintain end pressure while soldering. Avoid excessive heat which may distort dielectric.

SOLDER TO BODY SMA ANGLE PLUGS

901-9221-1A, -1ASF for .141" S/R; 901-9221-2A, -2ASF for .085" S/R

Step 1

Step 1

Clean cable end for .625"(16mm) min. length. Trim cable jacket and dielectric to dimension shown. Do not nick center conductor. Remove burrs from cable jacket and center conductor.

Step 2

Step 2

Assemble cable into connector body. Bottom cable in connector body as shown. Solder cable to connector body as shown.

Step 3

Step 3

Solder center conductor to contact as shown. Remove excess solder. Assemble cap and solder or lightly punch center of cap for retention in body.

C50-SOLDER TO BODY TYPES FOR SEMI-RIGID CABLE WITHOUT CONTACT & INSULATOR

Amphenol Number	Connector Type	Cable RG-/U	Stripping Dims., inches (mm)	
			a	c
901-9201-1A	SMA Plug	.141 RG-402	.091(2.3)	—
901-9201-1ASF	SMA Plug	.141 RG-402	.091(2.3)	—

Step 1

Step 1

Clean cable end for .625"(16mm) min. length. Trim cable jacket and dielectric to dimensions shown in table. Do not nick center conductor. Remove burrs from cable jacket. File blunt end of center conductor to a 90° cone.

Step 2

Step 2

Assemble cable into connector body. Cable jacket and dielectric to be flush with end of body as shown. Solder cable to connector body. Avoid excessive heat which may distort dielectric.

Step 3

Step 3

Assemble snap ring in groove on connector body. Assemble gasket in position as shown. Compress snap ring and assemble coupling nut as shown.

SOLDER TO COLLET METHOD FOR SEMI-RIGID CABLE

SMA Plug 901-509 for .141S/R

Step 1 Strip cable jacket to dimensions shown. To avoid cutting into dielectric, score cable jacket and flex slightly to break entirely through jacket. Slide rear locknut and adjustment nut onto cable.

Step 2 Insert cable into collet body and apply axial pressure to cable to assure good metal contact at Point **a**. Solder cable jacket to collet body with 60/40 solder. Trim dielectric flush with tines of collet body. Do not nick cable center conductor.

Step 3 Solder contact to cable center conductor with 60/40 solder and maintain the $.007$ dimension shown between contact and tines. Do not permit solder on contact o.d.

Step 4 Slide adjustment nut over collet body. Install C-ring into groove on collet body. Thread rear locknut loosely into place. Thread this assembly onto connector assembly. Make phase angle adjustment by turning adjustment nut: one revolution of nut = $[0.636 \times f(\text{GHz})]^\circ$. When desired phase angle is achieved, hold adjustment nut in place and turn the front locknut down against it. Then tighten rear locknut and assembly is complete.

Assembly

Step 1

Step 2

Step 3

Step 2 & 3 for angle plugs

Step 1 Slide outer ferrule onto cable as shown. Strip cable jacket, braid and dielectric to dimensions shown in table. All cuts should be sharp and square. Do not nick braid, dielectric or center conductor when cutting.

Step 2 Flare end of cable braid slightly as shown to facilitate insertion onto inner ferrule. Do not comb out braid. Solder center contact to cable (SN60-40 rosin core solder recommended.) Note: Center conductor should be visible through soft solder access hole in contact, prior to soldering.

Step 3 Install body onto cable so that female portion slides under braid and insulator butts flush against cable dielectric. Slide outer ferrule over braid and up against body. Make sure no slack exists in braid. Crimp over ferrule with tool specified in table, keeping cable dielectric bottomed against insulator.

Step 2 & 3 Angle Plugs: Place cable dielectric into body and press ferrule against body as shown. Crimp with die set shown in table above. Solder cable center conductor into contact as shown. Insert cap and solder as shown or dimple and lightly punch center of cap for retention in body, for brass versions. Place heat shrink tubing over crimp ferrule, against body, and apply heat.

Step 1

Step 1 Slide heat shrink tubing and outer ferrule onto cable. Strip cable jacket, braid and dielectric to dimensions shown in table above. All cuts are to be sharp and square. Do not nick braid, dielectric or center conductor when cutting. Flare end of cable braid slightly as shown to facilitate insertion of inner ferrule. Do not comb out braid.

Step 2

Step 2 For crimp contact type only:
Crimp center contact to cable conductor using 8-indent Tool and Positioner shown in Table above. Note: Contact must bottom against cable dielectric.
***For solder type connectors:**
Solder contact to center conductor.

Step 3

Step 3 Install inner ferrule of body assembly over cable dielectric and under braid. Place outer ferrule against body and crimp with tool 227-944 (M22520/5-01) and die set shown in table above. Place heat shrink tubing over crimp ferrule, against body, and apply heat.

BRAID CRIMP-SOLDER CENTER CONTACT TYPES FOR FLEXIBLE CABLE

901-9610-3, -3SF	SMA Bulkhead Jack	174,179,187,188,316	.610(15.5)	.340(8.6)	.110(2.8)	.128(3.3)	227-1221-03 Cavity A
901-9610-12SF	SMA Bulkhead Jack	Double Braid 316	.610(15.5)	.340(8.6)	.110(2.8)	.151(3.8)	227-1221-37 Cavity B
901-10015	SMA Bulkhead Jack	LMR 240	4.93(12.5)	—	.043(2.4)	.255(6.5)	227-1221-59 Cavity A

Step 1

Step 1 Slide heat shrink tubing and outer ferrule onto cable. Strip cable jacket, braid and dielectric to dimensions shown in table above. All cuts are to be sharp and square. Do not nick braid, dielectric or center conductor when cutting. Tin center conductor. Avoid excessive heat to prevent swelling of cable dielectric. Flare end of cable braid slightly as shown to facilitate insertion of inner ferrule. Do not comb out braid.

Step 2

Step 2 Slide clamp nut over inner ferrule, and slide inner ferrule under braid until cable dielectric is flush with front of inner ferrule. Slide outer ferrule in place and crimp with die set shown in table above.

Step 3

Step 3 Place insulator washer on cable center conductor and bottom against inner ferrule body as shown. Contact must butt firmly against insulator washer while soldering.

Step 4

Step 4 Screw ferrule-contact assembly into body and tighten to 20-25 lbf.-in. torque. Slide heat shrink tubing over ferrule, up against clamp nut and shrink by applying heat.

BRAID CRIMP-SOLDER CENTER CONTACT TYPES FOR RG-174 & RG-179 CABLE GROUPS

Amphenol Number	Connector Type	Cable RG-/U	Stripping Dimensions, inches (mm)			Hex Cavity for Outer Ferrule	Die Set for Tool 227-944	CTL Series Tool
			a	b	c			
901-9531-3, -3SF	SMA Angle Plug	174, 179, 187, 188, 316	.475(12.1)	.235(6.0)	.090(2.3)	.128(3.3)	227-1221-03 Cavity A	CTL-9

901-9531-12, -12SF	SMA Angle Plug	Double Braid 316	.475(12.1)	.235(6.0)	.090(2.3)	.151(3.8)	227-1221-37 Cavity B	—
901-9881	SMA Angle Plug	174, 179, 187, 188, 316	.472(12.0)	.216(5.5)	.102(2.6)	.128(3.3)	227-1221-03 Cavity A	CTL-9

Step 1

Step 1

Slide heat shrink tubing and outer ferrule onto cable. Strip cable jacket, braid and dielectric to dimensions shown in table above. All cuts are to be sharp and square. Do not nick braid, dielectric or center conductor when cutting. Tin center conductor. Avoid excessive heat to prevent swelling of cable dielectric. Flare end of cable braid slightly as shown to facilitate insertion of inner ferrule. Do not comb out braid.

Step 2

Step 2

Solder center contact to cable center conductor as shown. Remove excess solder. **Note:** Contact must bottom against cable dielectric. (For angle plugs skip to Step 3B below.)

Step 3

Step 3

Install coupling nut and body assembly as shown. Place ferrule against body and crimp with die set shown in table above. Place heat shrink tubing over crimp ferrule, against body, and apply heat.

Step 3B for angle plugs

Step 3B

For angle plugs: Place cable dielectric into body and press ferrule against body as shown. Crimp with die set shown in table above. Solder cable center conductor into contact as shown. Insert cap and solder as shown or dimple and lightly punch center of cap for retention in body, for brass versions. Place heat shrink tubing over crimp ferrule, against body, and apply heat.

BRAID CRIMP-SOLDER CENTER CONTACT TYPES FOR FLEXIBLE CABLE

Amphenol Number	Connector Type	Cable RG-/U	Strip Dimensions, inches (mm)			Hex Cavity for Outer Ferrule	Die Set for Tool 227-944
			a	b	c		
901-9884	Plug	55, 142, 223, 400	.480 (12.2)	.250 (6.4)	.140 (3.6)	.213 (5.4)	227-1221-11 Cavity A
901-9852	Plug	174,179,187,188,316	.500 (12.7)	.260 (6.6)	.150 (3.8)	.128 (3.3)	227-1221-3 Cavity A
901-9863	Bulkhead Jack	174,179,187,188,316	.610 (15.5)	.340 (8.6)	.110 (2.8)	.128 (3.3)	227-1221-3 Cavity A
901-9908	Angle Plug	223	.475 (12.1)	.235 (6.0)	.120 (3.0)	.213 (5.4)	227-1221-11 Cavity A
901-9990	Bulkhead Jack	178, 196	.255 (6.5)	.105 (2.67)	.075 (1.8)	.105 (2.67)	227-1221-03 Cavity B

Step 1

Step 1

Slide heat shrink tubing and outer ferrule onto cable. Strip cable jacket, braid and dielectric to dimensions shown in table above. All cuts are to be sharp and square. Do not nick braid, dielectric or center conductor when cutting. Tin center conductor. Avoid excessive heat to prevent swelling of cable dielectric. Flare end of cable braid slightly as shown to facilitate insertion of inner ferrule. Do not comb out braid.

For 901-9863 RP-Bulkhead Jack

Step 2

Step 2

Slide clamp nut over inner ferrule, and slide inner ferrule under braid until cable dielectric is flush with front of inner ferrule. Slide outer ferrule in place and crimp with die set shown in table above.

Step 3

Step 3

Place insulator washer on cable center conductor and bottom against inner ferrule body as shown. Contact must butt firmly against insulator washer while soldering.

Step 4

Step 4

Screw ferrule-contact assembly into body and tighten to 20-25 lbf.-in. torque. Slide heat shrink tubing over ferrule, up against clamp nut and shrink by applying heat.

For 901-9884, 901-9852, 901-9908 RP Plugs

Step 2

Step 2

Solder center contact to cable center conductor as shown. Remove excess solder. Note: Contact must bottom against cable dielectric.

Step 3

Step 3

Install coupling nut and body assembly as shown. Place ferrule against body and crimp with die set shown in table above. Place heat shrink tubing over crimp ferrule, against body, and apply heat.

SOLDER TYPES FOR .141" SEMI-RIGID CABLE

Step 1

Step 1

Clean cable end for .625"(16mm) min. length. Trim cable jacket and dielectric to $c = .090(2.3)$ for 901-9866 or $c = .125(3.2)$ for 901-9857. Do not nick center conductor. Remove burrs from cable jacket and center conductor. For 901-9866, file blunt end of center conductor to a 90° cone.

**Step 2
for 901-9866 RP-Plug
RP-Plug**

Step 2

For 901-9866 assemble cable into connector body. Make sure center conductor is straight. Use care in pushing center conductor into spring contact. Make sure jacket bottoms in connector. Maintain end pressure while soldering. Avoid excessive heat which may distort dielectric.

**Step 2
for 901-9857
RP-Bu**

Step 2

For 901-9857 solder contact to center conductor. Use .015"(.4mm) shim to accurately maintain space between jacket, dielectric and contact. Remove all excess solder.

Step 3a, b

Step 3a

Assemble cable and contact into connector body. Cable jacket and dielectric to be flush with shoulder of body as shown. Solder cable to connector body. Avoid excessive heat which may distort dielectric.

Step 3b

Press fit insulator into connector body. Bottom insulator in connector body as shown.

CRIMP TYPE PLUGS & BULKHEAD JACKS

903-284P-52S	50Ω SMC Plug	174, 188, 316	.128(3.3)	227-1221-03 Cav. A	.642(16.3)	.402(10.2)	.080(2.0)
903-284P-52S1	50Ω SMC Plug	RD-316	.128(3.3)	227-1221-03 Cav. A	.642(16.3)	.402(10.2)	.080(2.0)

Step 1 Slide ferrule over cable. Trim cable to dimensions shown in table above. Tin center conductor.

Step 2 Insert cable into back end of crimp body assembly as shown. Dielectric will bottom in back insulator. Slide ferrule over braid and crimp using hex die shown in table above.

Step 3 Assemble contact over center conductor so that shoulder of contact butts against back insulator. Heat contact to solder. For SMB plugs: After soldering contact, assemble front insulator over contact.

Step 4 Insert assembly into body assembly and tighten to a torque of 90 to 100 ozf-in.

Step 1 Slide ferrule over cable. Trim cable to dimensions shown in table above. Tin center conductor.
☆ for P/N 903-429P-51A only, make 2 slits in jacket .062"(1.6mm) long, 180° apart.

Step 2 Insert cable into back end of crimp body assembly as shown. Center conductor will enter slot in contact. Slide ferrule over braid and crimp using hex die shown in table above.

Step 3 Solder center conductor into contact.

Step 4 Insert cap into body and dimple or lightly punch center of cap for retention in body.

Step 1

Step 1 Slide ferrule over cable. Trim cable to dimensions shown in table above.

Step 2

Step 2 Tin center conductor
Assemble contact over center conductor so that shoulder of contact butts against cable dielectric. Heat contact to solder.

Step 3

Step 3 Insert cable and contact into back end of crimp body. Contact shoulder will bottom in insulator. Slide ferrule over braid and crimp using hex die shown in table above.

Dimensions, millimeters

Step 1

AIRLINE PREPARATION. Prepare outer and inner conductors to dimensions shown. Strict adherence to dimensional tolerances is required for precision performance.

Step 2

CONNECTOR ASSEMBLY. Thread bead and contact assembly into airline inner conductor until finger tight and place into outer conductor as shown.

Step 3

Carefully guide the body assembly over the bead and contact assembly and onto the airline outer conductor. Seat the airline outer conductor in the assembly. Thread the body assembly until it is finger tight.

Secure the assembly by wrench tightening the body assembly to the airline outer conductor with a torque of 2.03 inch to 2.49 N-m (18 to 22 inch pounds).

Assembly

Assembly Instructions - C66 APC 3.5 Airline

OUTER CONDUCTOR
Factory prepared P/N 131-7502

INNER CONDUCTOR
Factory prepared P/N 131-7501

BEAD & CONTACT ASSEMBLY

BODY ASSEMBLY APC-3.5

Step 1

AIRLINE PREPARATION. Prepare outer and inner conductors to dimensions shown. Strict adherence to dimensional tolerances is required for precision performance.

Surface A of inner conductor must be flush to .0005 below Surface B of outer conductor.

Step 2

CONNECTOR ASSEMBLY. Thread bead and contact assembly into airline inner conductor until finger tight and place into outer conductor as shown.

Step 3

Carefully guide the body assembly over the bead and contact assembly and onto the airline outer conductor. Seat the airline outer conductor in the assembly. Thread the body assembly until it is finger tight.

Secure the assembly by wrench tightening the body assembly to the airline outer conductor with a torque of 30 inch pounds.

Assembly Instructions - C67 APC-7, APC-7S, APC-N Airline

OUTER CONDUCTOR
Factory prepared P/N 131-2094-4

ASSEMBLY**

BODY ASSEMBLY APC-7 ILLUSTRATED

NOTE: The APC-7 is used here for illustration only. These instructions also apply to APC-N to APC-7S plug and jack designs for 7mm air line.

Step 1

AIRLINE PREPARATION. Prepare outer and inner conductors to dimensions shown. Strict adherence to dimensional tolerances is required for precision performance.

Surface A of inner conductor must be flush to .0005 below Surface B of outer conductor.

Step 2

CONNECTOR ASSEMBLY. Thread bead and contact assembly into airline inner conductor until finger tight and place into outer conductor as shown.

Step 3

(APC-7 connector only — Retract the threaded retainer ring by threading it back into the coupling nut. The coupling nut should now float freely on the body assembly making the wrench flats accessible.)

Carefully guide the body assembly over the bead and contact assembly and onto the airline outer conductor. Seat the airline outer conductor in the assembly. Thread the body assembly until it is finger tight.

Secure the assembly by wrench tightening the body assembly to the airline outer conductor with a torque of 30 inch pounds.

Step 1 All parts of the connector are shown.

Step 2 Strip the inner conductor, dielectric, and jacket as per "RECOMMENDED CABLE STRIPPING DIM'S" in catalog.

Step 3 Slide the INSULATOR onto inner conductor against the jacket. Then insert conductor into the CONTACT PIN and solder it as shown.

Step 4 Slide the SOLDER NUT onto cable.

Step 5 Insert cable and parts into the MAIN BODY, then screw the SOLDER NUT until it is tight and solder it as shown.

STRAIGHT CONNECTORS FOR FLEXIBLE CABLE

Amphenol Number	Connector Type	Cable RG-/U	Hex Crimp Data		Stripping Dimensions, inches (mm)		
			Cavity for Outer Ferrule	CTL Series Tool No.	d	e	f

Step 1 Prepare cable according to diagram. Do not damage braid and inner conductor of cable. Slide crimp ferrule "a" over the braid.

Step 2 Solder contact "b" to the center conductor of the cable. Contact must butt on the dielectric of the cable as shown.

Step 3 Flare braid and insert contact into body assembly "c". Contact must bottom in insulator resulting in a dimension of $.006 \pm .007$ from the tip of the contact to the end of the body. Crimp ferrule using the appropriate hex dies.

Assembly

STRAIGHT CONNECTORS FOR SEMI-RIGID CABLE

102-799-116	1.0/2.3 ANGLE PLUG	174, 188, 316	.098 (2.48)	.198 (5.02)	.414 (10.5)	.128 (3.3)	CTL-13
102-907-06	1.0/2.3 ANGLE JACK	174, 188, 316	.078 (2.0)	.216 (5.5)	.432 (11.0)	.128 (3.3)	CTL-13
102-907-34	1.0/2.3 ANGLE JACK	L910/34, RG180	.078 (2.0)	.216 (5.5)	.432 (11.0)	.213 (5.4)	CTL-1

Assembly

- Step 1** Prepare cable according to diagram. Do not damage braid and inner conductor of cable. Slide crimp ferrule over the braid
- Step 2** Flare braid and insert into body. Slide crimp ferrule over body and crimp the ferrule using appropriate crimp tool and die set.
- Step 3** solder inner conductor to contact (Sn60 recommended). Place cap on rear opening of body. Press cap into housing.

STRAIGHT JACKS FOR FLEXIBLE CABLE

Amphenol Number	Connector Type	Cable RG-/U	Strip Dimensions, inches (mm)			Hex Crimp Data	
			a	b	c	Cavity for Outer Ferrule	CTL Series Tool No.
102-913-06	1.0/2.3 JACK	174, 188, 316	.078 (2.0)	.216 (5.5)	.432 (11.0)	.128 (3.3)	CTL-13
102-913-18	1.0/2.3 JACK	MINI-COAX	.078 (2.0)	.216 (5.5)	.432 (11.0)	.105 (2.67)	SX 660 0060
102-913-06DB	1.0/2.3 JACK	RD 316	.078 (2.0)	.216 (5.5)	.432 (11.0)	.151 (3.83)	CTL-13

Step 1

Step 1 Prepare cable according to diagram. Do not damage braid and inner conductor of cable. Slide crimp ferrule over the braid.

Step 2

Step 2 Solder contact to the center conductor of the cable. Contact must butt on the dielectric of cable as shown.

Step 3

Step 3 Flare braid and insert contact into body assembly. Contact must bottom in insulator. Crimp ferrule using the appropriate hex dies.

RIGHT ANGLE JACKS FOR SEMI-RIGID CABLE

Amphenol Number	Connector Type	Cable RG-/U	Stripping Dims., inches (mm)	
			a	c
102-799-85	1.0/2.3 JACK	S/R .085	.098 (2.48)	.198 (5.02)
102-799-141	1.0/2.3 JACK	S/R .141	.098 (2.48)	.198 (5.02)

Step 1

Step 1 Prepare cable as shown. Remove burrs from outer/inner conductors of cable.

Step 2

Step 2 Insert cable into connector until it bottoms on shoulder of body. Solder outer conductor (Sn60) recommended.

Step 3

Step 3 Solder inner conductor to contact (Sn-60 recommended). Place cover on rear opening of body. Press cap into housing.

A**AMPS**

Advanced Mobile Phone System, an analog standard for wireless service.

Accessories

Mechanical devices, such as cable clamps, added to connector shells and other such hardware which is attachable to connectors to make up the total connector configuration.

A/D

Analog-to-digital.

Alloy

A mixture of two or more metals combined to achieve properties, such as a lower melting point or greater strength, that the individual metals do not possess.

Ambient

The atmospheric conditions surrounding a given item. Normally in terms of factors which influence or modify, such as temperature, humidity, etc.

Amplitude

The magnitude of variation in a changing quantity from its zero value. The word required modification - as with adjectives such as peak, maximum, rms, etc. - to designate the specific amplitude in question.

Analog

The representation of information by means of continuously variable signal.

Attenuation (a)

The decrease of a signal with the distance in the direction of propagation. Attenuation may be expressed as the scalar ratio of the input power to the output power, or as the ratio of the input signal voltage to the output signal voltage.

B**Back Mounted (rear mounting)**

When a connector is mounted from the inside of a panel or box with its mounting flange inside the equipment.

Backplane Panels

An interconnection panel into which PCB cards or other panels can be plugged. These panels come in a variety of designs ranging from a PC motherboard to individual connectors mounted in a metal frame. Panels lend themselves to automated wiring.

Bandwidth

The range of frequencies for which performance falls within specific limits.

Barrier Seal

A barrier seal is a seal preventing the passage of moisture or gases through the insulator and the gap between insulator and center conductor or outer conductor of a connector or adapter.

Base Material

Metal from which the connector, contact or other piece part accessory is made and on which one or more metals or coatings may be deposited.

Bayonet Coupling

A quick coupling device for plug and receptacle connectors, accomplished by rotation of a cam operating device designed to bring the connector halves together.

B-CDMA

Broadband - Code Division Multiple Access (CDMA)

Bending Radius

The minimum permissible radius for fixed installation of the cable. This

radius is mainly used in climatic tests.

Minimum dynamic: The minimum permissible radius for flexible applications of the cable.

BNC (Bayonet Neill Concelman)

Coaxial connector with bayonet coupling mechanism. Available in 50 Ohm and 75 Ohm versions. Frequency range DC - 4 GHz (50 Ohm) and DC-1 GHz (75 Ohm), respectively. Named after Amphenol Engineer Carl Concelman, and Bell Labs Engineer Paul Neill.

Body

Main, or largest, portion of a connector to which other portions are attached.

Bonded Assembly

A connector assembly in which the components are bonded together using an electrically appropriate adhesive in a sandwich structure to provide sealing against moisture.

Braid

Woven wire used as shielding for insulated wires and coaxial cables. Also, a woven fibrous protective outer covering over a conductor or cable.

Braid Coverage

A calculated percentage which defines the completeness with which a braid or shield covers the surface of the underlying component.

Bulkhead

A term used to define a mounting style of connectors. Bulkhead connectors are designed to be inserted into a panel cutout from the rear (component side) or front side of the panel.

Butted Contact

When two conductors come together end-to-end, but do not overlap, with their axis in line.

C**CATV**

Cable television (previously community antenna television) technology, commonly employed by broadband LANs for signal distribution.

Cable Assembly

A completed cable and its associated hardware (e.g. connector).

Capacitance

The property of an electrical conductor (dielectric in a capacitor) that permits the storage of energy as a result of electrical displacement. The basic unit of capacitance is the Farad, however measurement is more commonly in microfarads or picofarads.

Capillary Actions

The effect of surface tension that draws a liquid into a small opening.

CDMA (IS-95)

Code Division Multiple Access, a digital standard for wireless service.

Closed Entry Contact

A specially designed connector interface which controls the entry of the male pin from damaging the female contact.

Coaxial Cable

A transmission line consisting of two concentric conductors insulated from each other. In its flexible form it consists of either a solid or stranded center conductor surrounded by a dielectric. A braid is then woven

over the dielectric to form an outer conductor. A protective plastic covering is placed on top of the braid.

Concelman

Amphenol Engineer after which many coaxial connectors are named: C, BNC, TNC, etc.

Connector Assembly

Includes housing and contact plus additional components such as hardware used to hold the assembly together and/or make the assembly a functional connector.

Contact

The conducting part of an interconnect at the interface between the connector and the lead on the device being connected.

Contact Alignment

Defines the overall radial play which contacts shall have within the insert cavity so as to permit self-alignment of mated contacts. Sometimes referred to as amount of contact float.

Contact Cavity

A defined hole in the connector insert or housing into which the contact must fit.

Contact Durability

The number of insertion and withdrawal cycles that a connector must be capable of withstanding while remaining within the performance levels of the applicable specification.

Contact Engaging & Separating Force

Force needed to either engage or separate pins and socket contacts

when they are in and out of connector inserts. Values are generally established for maximum and minimum forces. Performance acceptance levels vary by specification and/or customer requirements.

Contact Plating

Deposited metal applied to the basic contact metal to provide the required contact-resistance and/or wear-resistance.

Contact Pressure

Force which mating surfaces exert against one another.

Contact Resistance

Measurement of electrical resistance of mated contacts when assembled in a connector under typical service use. Electrical resistance is determined by measuring from the rear of the electrical area of one contact to the rear of the mating contact (excluding both crimps) while carrying a specified test current.

Contact Retention

Defines minimum axial load in either direction which a contact must withstand while remaining firmly fixed in its normal position within an insert.

Convection

The transfer of heat by movement of hot air. Often used in conjunction with infrared radiation to reduce the effect of IR shadowing.

Coplanarity

The distance between the lowest and highest lead when the connector is laying in its seating plane.

Corona

A luminous discharge due to ionization of the air surrounding a conductor caused by a voltage gradient exceeding a certain critical value.

Crimp

Act of compressing (deforming) a connector ferrule around a cable in order to make an electrical connection.

Crimping Dies

A term used to identify the shaping tools that, when moved toward each other, produce a certain desirable shape to the barrel of the terminal or contact that has been placed between them. Crimping dies are often referred to as die sets or as die inserts.

Crimping Termination

Connection in which a metal sleeve is secured to a conductor by mechanically crimping the sleeve with pliers, presses or crimp dies.

Crimping Tool

A term commonly used to identify a hand held mechanical device or table press that is used to crimp a contact, terminal or splice.

Cross Talk

A magnetic or electrostatic coupling which causes the unwanted transfer of energy from one circuit (disturbing circuit) to another circuit (disturbed circuit).

CTIA

Cellular Telecommunications Industry Association.

Cut-off Frequency (fc)

The frequency, above which other than the TEM mode may occur. The transmission characteristics of cables

above their cutoff frequency may be unstable.

Cycle

One complete sequence of values of an alternating quantity, including a rise to maximum in one direction and of return to zero. The number of cycles occurring in one second is called the frequency.

D**D/A**

Digital-to-analog

dBm

Relative measure of signal power where the reference 0 dBm is equal to one milliwatt. See also decibel.

Decibel (dB)

A relative unit without dimensions calculated as ten times the logarithm to the base 10 of a power ratio or as twenty times the logarithm to the base 10 of a voltage ratio.

Note: What is commonly measured as VSWR in the RF world is referred to as return loss and measured in dB in the CATV industry.

Delay Line

A cable that delays electrical signals by a specified amount of time.

Dewetting

A situation where a lead or pad was at one point in the soldering process wetted by the solder, but due to extended time or temperature, the presence of intermetallics, volatiles or other causes, has become withdrawn from the wetted surface.

Dielectric

In a coaxial cable, the insulation between inner and outer conductor.

It significantly influences electrical characteristics such as impedance, capacitance, and velocity of propagation.

Dielectric Constant

Electrical property of a material that describes its behavior in an electric field. The dielectric constant of the dielectric is the most important design parameter for coaxial cables and determines dimensions, losses and propagation characteristics.

Dielectric Loss

In a coaxial cable, the losses caused by transformation of electromagnetic energy into heat within the dielectric material.

Dielectric Strength

The voltage which an insulating material can withstand before breakdown occurs.

Dielectric Withstanding Voltage

The maximum potential gradient that a dielectric material can withstand without failure.

Digital

(1) Pertaining to the utilization of discreet integral numbers in a given base to represent all the quantities that occur in a problem or a calculation. It is possible to express in digital form all information stores, transferred or processed by a dual-state condition; e.g., on-off, open-closed and true-false. (2) Compare with analog.

DIN 7/16

50 Ω coaxial connector with screw type coupling mechanism providing excellent intermodulation characteristics. Suitable for medium to high power applications. Frequency

range DC - 7.5 GHz.

Dip Solder Terminal

The terminals on a connector which are inserted into holes in the PC board and then soldered in place.

Direct Current (DC)

An electric current which flows in only one direction.

Dissipation

Unusable or lost energy, such as the production of unused heat in a circuit.

Distortion

An unwanted change or addition to a signal or waveform when it is amplified. This definition excludes noise which is an extraneous signal super-imposed on the desired signal.

Dummy Load

A dissipative device used at the end of a transmission line or waveguide to convert transmitted energy into heat, so essentially no energy is radiated outward or reflected back to its source.

Dust Cap

A device attached to a connector to provide protection against dust and foreign debris.

E

Eccentricity

A measure of a conductor's location with respect to the circular cross section of the insulation. Expressed as a percentage of center displacement of one circle within the other.

EIA

Electronic Industries Association.

Electromagnetic Compatibility (EMC)

EMC describes the ability of an electrical system to avoid electromagnetic interference with the environment.

Electromagnetic Interference (EMI)

Unwanted electrical or electromagnetic energy that causes undesirable responses, degrading performance or complete malfunctions in electronic equipment. See also: Noise.

Electronic Industries Association (EIA)

A U.S. manufacturer's group which, as one of its functions, sets some interface standards.

Electroplating

A method of electrically depositing metals of very precise compositions and thickness onto a base metal.

Ethernet

(1) In a local computer network, a branching broadcast communications system for carrying digital data packets among locally distributed computing stations. (2) A two-level, baseband, local-area data communications network developed by Xerox and supported by DEC and Intel, among others.

Eutectic Solder

The most common solder alloy because of its low melting point (183°C/361°F), composed of 63% tin and 37% lead.

F

FCC

Federal Communications Commission.

Feed-through

A connector or terminal block, usually having double-ended terminals which permits simple distribution and bussing of electrical circuits. Also used to describe a bushing in a wall or bulkhead separating compartments at different pressure levels, with terminations on both sides.

Ferrule

A short tube to make solderless connections to shielded or coaxial cable (e.g. as in crimping).

Fiber Optics

The technology for guidance of light waves through optical fibers; specifically when the optical energy is guided to another location in order to transmit information.

Flange

A projection extending from, or around the periphery of, a connector and provided with holes to permit mounting the connector to a panel, or to another mating connector half.

Footprint

The pattern on the printed circuit board to which the leads on a surface mount component are mated. Also called a land or a pad.

Frequency Modulation (fm)

A scheme for modulating a carrier frequency in which the amplitude remains constant but the carrier frequency is displaced in frequency proportionally to the amplitude of the modulating signal. An fm broadcast is practically immune to atmospheric and man-made interference.

Fretting Corrosion

A form of accelerated oxidation that

appears at the interface of contacting materials undergoing slight cyclic relative motion. All non-noble metals (tin) are susceptible to some degree of fretting corrosion and will suffer contact resistance increases.

Front Mounted (front mounting)

A connector is front mounted when it is attached to the outside or mating side of a panel. A front mounted connector can only be installed or removed from the outside of the equipment.

G**GHz**

See Gigahertz.

Gigahertz (GHz)

One billion cycles per second (1×10^9).

GPS

Global Positioning System

GSM

Global System for Mobile communication, a digital standard for wireless service for high-performance cell phones; European and de facto world standard.

H**HDTV**

High-definition television.

Heat Shock

Test to determine the stability of a material when exposed to a sudden high temperature change for a short period of time.

Heat Treating

A process that uses precise heating and tooling of metals in order to optimize internal stresses and spring properties.

Hermetic Seal

Hermetically sealed connectors provide contacts bonded to the connector by glass. They permit maximum leakage rate of gas through the connector of 1.0 micron ft/hr at one atmosphere pressure for special applications.

Hermaphroditic Connector

A connector where both mating members are exactly alike at their mating face. There are no male or female members, but provisions have been made to maintain correct polarity, hot lead protection, sealing and coupling.

Hermaphroditic Contacts

Contacts in which both mating elements are precisely alike at their mating face.

Hertz (Hz)

International standard term for cycles per second. Named after the German physicist Heinrich R. Hertz (e.g. 60 cycles per second is equal to 60 hertz or 60 Hz).

I**IEEE**

Institute of Electrical and Electronics Engineers.

IM/PIM (Passive Intermodulation)

The generation of new (and in the case of cable assemblies undesirable) signals (intermodulation products) at the non-linear characteristics of transmission elements.

Impedance (characteristic, Z₀)

Characteristic property of a transmission line describing the ratio between electric and magnetic fields.

Impedance Match

A condition in which the impedance of a component or circuit is equal to the internal impedance of a transmission line. This gives maximum transfer of energy from the source to the load, as well as minimum reflection and distortion.

Inductance

The property of a circuit or circuit element that opposes a change in current flow, thus causing current changes to lag behind voltage changes. It is measured in Henrys.

Insert

The part which holds the contacts in their proper arrangement and electrically insulates them from each other and from the shell.

Insertion Loss

The loss in load power due to the insertion of a component, connector or device at some point in a RF transmission system. Generally expressed in decibels as the ratio of the power received at the load before insertion of the apparatus, to the power received at the load after insertion (for more information please refer to Appendix).

Insulation

A material having high resistance to the flow of electric current. Often called a dielectric in RF cable.

Insulation Resistance

The electrical resistance of the insulating material (determined under specified conditions) between any pair of contacts, conductors, or grounding device in various combinations.

Interconnection

Mechanically joining assemblies together to complete electrical circuits.

Interface

The two surfaces on the contact side of both halves of a multiple-contact connector which face each other when the connector is assembled.

Interference

An electrical or electromagnetic disturbance that causes undesirable response in electronic equipment.

Intermetallic

Chemical compounds formed between the metals present in the solder, base metal and protective plating. Intermetallic formation is necessary for good solder joints, but excessive intermetallics can cause brittleness.

Intermodulation (IMD)

A phenomenon that occurs when two or more fundamental frequencies are present in an electronic circuit.

IR Shadowing

When connector bodies or other components prevent the infrared energy from directly striking some solder joints, causing non-uniform heating.

ISO

International Standards Organization.

J**Jack**

A connecting device into which a plug can be inserted to make circuit connections. The jack may also have contacts which open or close to perform switching functions when

the plug is inserted or removed. See also: receptacle.

Jacket

An outer non-metallic protective cover applied over an insulated wire or cable.

J-Lead

A surface mount lead configuration where leads are bent into curves. Infrequently used on interconnects.

L**LAN**

Local Area Network. A data communication network confined to a limited geographic area (up to 6 miles or about 10 kilometers).

Land

The metal portion of a printed circuit board where the pads on a surface mount component are mated. Also called a footprint or a pad.

Levels of Interconnection

Device to board or chassis. The connection point between components (tubes, transistors, IC packages) and the PC board or chassis.

Board to motherboard or backplane. The connection point between PC boards or sub-circuit modules and the motherboard or a backplane Board.

Backplane wiring. Connections between levels to each other and to other sub-circuits.

Input/output. Connections for power and signals into and out of a system. Connections may be between subassemblies within the same enclosure or between individual units.

Line Impedance

Impedance as measured across the terminals of a transmission line; frequently the characteristic impedance of the line.

Low Noise Cable

Cable specially constructed to avoid spurious electrical disturbances caused by mechanical movements.

M**Mating Face Seal**

A mating face seal is a seal preventing the passage of moisture or gases into or out of the connecting interface of two connectors in mated condition.

MCX (Micro coaxial)

Micro coaxial connector with snap on coupling mechanism. Available in 50 ohm and 75 ohm versions. Frequency range DC - 6 GHz.

MHV (Miniature High Voltage)

Coaxial connector with bayonet coupling mechanism. Working voltage 2.2 kV DC.

Microstrip

A type of transmission line configuration which consists of a conductor over a parallel ground plane, and separately by a dielectric.

Microwave

That portion of the electromagnetic spectrum lying between the far infrared and conventional radio frequency range. The microwave frequency range extends from 1 GHz to 300 GHz. Microwaves are usually used in point-to-point communications because they are easily concentrated into a beam.

MIL

Military (e.g. as in Military Standards).

Mismatch (Connector Impedance or Line Impedance)

The condition in which the impedance of a source does not match or equal the impedance of the connected load. This reduces power transfer by causing reflection.

MMCX

Miniature Microcoax connector with snap on coupling mechanism. Available in 50 ohm and 75 ohm versions. Frequency range DC - 6 GHz.

Moisture Resistance

The ability of a material to resist absorbing moisture from the air or when immersed in water.

Motherboard

A printed board used for interconnecting arrays of plug-in electronic modules.

N**N (Neill)**

Coaxial connector with screw type coupling mechanism. Available in 50 ohm and 75 ohm version. Frequency range DC - 18 GHz (50 ohm) and DC-1 GHz (75 ohm), respectively.

NAB

National Association of Broadcasters

Noise

Random electrical signals, generated by circuit components or by natural disturbances.

O**OEM**

Original Equipment Manufacturer.

Ohm

The unit of measurement for electrical

resistance. A circuit is said to have a resistance of one ohm when an applied emf of one volt causes a current of one ampere to flow.

P**Pad**

The metal portion of a printed circuit board where the leads on a surface mount component are mated. Also called a footprint or a land.

Panel Seal

A panel seal is a seal preventing the passage of moisture or gases through the gap between the mounting hole of the panel and the connector body of the fixed connector.

PC

Personal Computer.

Permeability (magnetic)

The measure of how much better a material is than air as a path for magnetic lines of force. Air is assumed to have a permeability of 1.

Permittivity Relative

Synonym term for relative dielectric constant ϵ_r .

Phase Shift

Change in phase of a voltage or current after passing through a circuit or cable.

Phase Stability

Variation of the electrical length of a cable that can result from temperature or mechanical stress due to bending or torsion.

Pin Contact

A male type contact, usually designed to mate with a socket or female contact. It is normally connected to

the "dead" side of a circuit.

Plated Through-Hole

A hole through a printed circuit board that has been electroplated and into which a lead is placed and soldered for electrical and mechanical connection.

Plug

In coaxial RF connectors the plug is usually the movable portion, and is usually attached to a cable or removable assembly. Plugs mate with receptacles, jacks, outlets, etc.

Press-Fit Contact

An electrical contact which can be pressed into a hole in an insulator, printed board (with or without plated-through holes), or a metal plate.

Printed Circuit Board (PCB)

An epoxy glass and metal composite on which circuits are etched and to which active, passive and hardware components are attached. Also called PCB or PC Board.

Propagation Delay

Time required for an electronic digital device, or transmission network to transfer information from its input to its output.

Prototype

A model suitable for use in the complete evaluation of form, design and performance.

PTFE (polytetrafluoroethylene)

The thermally most stable and chemically most resistant carbonaceous compound. It is unaffected by sunlight, moisture, and virtually all chemicals. Temperature range is -200°C to +260°C / -392°F to +500°F. Electrical properties are very constant over

temperature and wide range of frequencies.

Pulse

A change in the level, over a relatively short period of time, of a signal whose value is normally constant.

Pulse Width

The length of time that the pulse voltage is at the transient level. Electronic pulse widths are usually in the millisecond (10⁻³), microsecond (10⁻⁶) or nanosecond (10⁻⁹) range.

R

Range

Number of sizes of connectors or cables of a particular type.

Receptacle

Usually the fixed or stationary half of a two-piece multiple contact connector. Also the connector half usually mounted on a panel and containing socket (female) contacts.

Reflection

See VSWR.

Reflection Loss

The part of a signal which is lost due to reflection of power at a line discontinuity.

Reflow Soldering

The process of screen printing solder paste and then heating it to cause it to melt, or “reflow”, to wet the leads and pads around it.

RF

Radio frequency.

RG/U

Symbol used to designate coaxial cables that are made to government

specification (e.g., RG-58U; in this designation the “R” means radio frequency, the “G” means government, the “58” is the number assigned to the government approval, and the “U” means it is an universal specification).

Rise Time

The time required for a component or logic circuit to change from the quiescent to the transient state when an output is applied, (e.g. elapsed time between application of input and attainment of full output level).

RMS

Root mean square.

Root Mean Square

The effective value of an alternating current, corresponding to the direct current value that will produce the same heating effect.

S

SC (Concelman, Amphenol Engineer)

Threaded connector 0 to 11 GHz.

Screening Effectiveness

Ratio of the power fed into a coaxial cable to the power transmitted by the cable through the outer conductor.

Screw Machine Contact

A contact which is machined from solid bar stock.

Self-Align

Design of two mating parts so that they will engage in the proper relative position.

Self Alignment

The tendency of leads to center themselves on solder pads due to the surface tension of the liquid solder.

Semi-Rigid

A cable containing a flexible inner core and a relatively inflexible sheathing.

Shield

(1) A conducting housing or screen that substantially reduces the effect of electric or magnetic fields on one side thereof, upon devices or circuits on the other side. Cable shields may be solid, braided, or taped (longitudinally or spirally). (2) In cables, a metallic layer placed around a conductor or group of conductors to prevent electrostatic or electromagnetic interference between the enclosed wires and external fields.

Shielding

The metal sleeve surrounding one or more of the conductors, in a wire circuit to prevent interference, interaction or current leakage.

Shock (mechanical)

(1) An abrupt impact applied to a stationary object. (2) An abrupt or non-periodic change in position, characterized by suddenness, and by the development of substantial internal forces.

SHV (Safe High Voltage)

Coaxial connector with bayonet coupling mechanism. Working voltage 5 kV DC.

Skin Effect

The phenomenon wherein the depth of penetration of electric currents into a conductor decreases as the frequency of the current increases.

SMA (Subminiature A)

50 ohm - subminiature coaxial connector with screw type coupling mechanism. Frequency range DC-18 GHz.

SMB (Subminiature B)

Subminiature coaxial connector with snap-on coupling mechanism. Frequency range DC - 4 GHz.

SMC (Subminiature C)

Subminiature coaxial connector with screw type coupling mechanism. Frequency range DC - 10 GHz.

SMS

Subminiature coaxial connector with slide-on coupling mechanism. Frequency range DC - 4 GHz.

Snap on

Used to describe the easy removal or assembly of one part to another. A connector containing socket (female) contacts into which a plug connector having male contacts is inserted.

Solder Contact

A contact or terminal with a cup, hollow cylinder, eyelet or hood to accept a wire for a conventional soldered termination.

Spring-Finger Action

Design of a contact, as used in a printed circuit connector or a socket contact, permitting easy, stress-free spring action to provide contact pressure and/or retention.

Standing-Wave

Distribution of current and voltage on a transmission line, resulting from two sets of waves traveling in opposite directions.

Standing Wave Ratio

A measure of the mismatch between the load the line. It is equal to 1 when the line impedance is perfectly matched to the load. (In which case the maximum and minimum are the

same, as current and voltage do not vary along the line). The perfect match would be a 1 to 1 ratio.

Stripline

A type of transmission line configuration which consists of a single narrow conductor parallel and equidistant to two parallel ground planes.

Surface Mount Device (SMD)

An active or passive device designed to be soldered to the surface of the printed circuit board.

Surface Mount Technology(SMT)

The process of assembling printed circuit boards with components soldered to the surface rather than fastened to printed circuit board through-holes.

SWR

Standing Wave Ratio.

T**TDMA**

Time Division Multiple Access, a digital standard primarily used in Asia and Europe.

Thermal Shock

The effect of heat or cold applied at such a range that non-uniform thermal expansion or contraction occurs within a given material or combination materials. The effect can cause inserts and other insulation materials to pull away from metal parts.

Third Generation (3G)

The next generation in wireless producing a convergence of standards and services.

TNC (Threaded Neill Concelman)

Coaxial connector with screw type

coupling mechanism. Available in 50 ohm and 75 ohm versions. Frequency range DC - 11 GHz (50 ohm) and DC - 1 GHz (75 ohm), respectively.

Transmission Line

A signal-carrying circuit composed of conductors and dielectric material with controlled electrical characteristics used for the transmission of high-frequency, narrow-pulse type signals.

Transmission Loss

The decrease of loss in power during transmission of energy from one point or another. Usually expressed in decibels.

Triaxial Cable

A cable consisting of one center conductor and two outer concentric conductors (with an insulating layer separating them). Notable for increased shielding efficiency.

Twinaxial Cable

Two conductors that are insulated from one another, twisted together and surrounded by a common shield.

U**UG**

Symbol used to describe coaxial connectors that were made to a government specification. This specification is now obsolete.

UHF

Coaxial connector with screw type coupling mechanism invented in the 1930's by Amphenol engineer E. Clark Quackenbush for use in the radio industry. Non-defined impedance. Frequency range DC.

Ultra High Frequency (UHF)

A Federal Communications

Commission designation for the band from 300 MHz to 3,000 MHz (3GHz) on the radio spectrum.

UMTS

Universal Mobile Telecommunications Systems.

V**Very High Frequency (VHF)**

A Federal Communications Commission designation for the band from 30 to 300 MHz on the radio spectrum.

Velocity of Propagation

The speed of an electrical signal down a length of cable compared to speed in free space expressed as a percentage.

Voltage

The term most often used to designate electrical pressure that exists between two points and is capable of producing a flow of current when a closed circuit is connected between the two points. Voltage is measured in volts, millivolts, microvolts and kilovolts. The terms electromotive force (emf), potential, potential difference and voltage drop are often referred to as voltage.

Voltage Standing Wave Ratio (VSWR)

A measure of the reflection, resulting from a ratio of the input signal to the reflected signal.

$$\text{VSWR} = (1+L) / (1-L)$$

VSWR

See Voltage Standing Wave Ratio and Standing Wave Ratio.

W**Wavelength**

The distance, measured in the direction of propagation, of a repetitive electrical pulse or waveform between two successive points that are characterized by the same phase of vibration.

Wave Soldering

The most widely used mass soldering process, primarily for through-hole boards, where the board is passed over a wave of solder which laps against the bottom of the board to wet the metal surfaces to be joined.

W-CDMA

Wideband-Code Division Multiple Access (CDMA).

Wetting

The ability of liquid solder to attach itself to the surfaces being joined through the formation of intermetallic bonds.

Wiping Action

The action which occurs when contacts are mated with a sliding action. Wiping has the effect of removing small amounts of contamination from the contact surfaces, thus establishing better conductivity.

WLAN

Wireless Local Area Network.

WLL

Wireless Local Loop.

Insulator/Dielectric Codes	362
VSWR vs Return Loss	363
Part Number Index	364-372
Cable Assembly Index	373-377
Other Division Catalogs	378-379

Index

Plating and Insulator/Dielectric Codes

Plating Codes

Plating Code	Body	Contact
P1	Nickel	Silver
P2	Nickel	Nickel
P3	Nickel	—
P4	Silver	Silver
P5	Nickel	Tin-Lead
P6	Tin-Lead	Gold
P7	Nickel	Contacts: Gold Terminals: Silver Legs: Tin-Lead
P8	—	Tin Dip
P9	Gold over Copper	Gold over Copper
P10	Gold over Copper	Gold over Nickel
P11	Gold over Nickel	Gold over Nickel
P12	Passivated	Gold over Copper
P13	Passivated	Gold over Nickel
P14	Gold over Copper	—
P15	Nickel	Gold over Nickel
P16	Body: Gold over Nickel Cube & Legs: Tin-Lead	Gold over Nickel
P17	Nickel	Gold over Copper
P22	Nickel over Copper	Center Contact: Gold over Nickel Outer Contact: Nickel over Copper
P26	Nickel over Copper (Black Epoxy) Legs: Tin over Nickel	Gold over Copper (Tin-Plated Terminals)
P27	—	Silver
P28	Nickel	Contact: Gold over Copper Ground Tab: Silver
P29	B: Gold over Nickel over Copper N: Passivated	Gold over Nickel over Copper
P33	Silver	Gold over Nickel
P34	Silver	Gold over Copper
P35	Conductive Black UV Coat over Zinc	Gold over Nickel
P36	Tin-Lead	Tin-Lead
PCF	Consult Factory	
P37	Nickel	Inner: Gold Outer: Gold

Insulator/Dielectric Codes

Ins. Code	Dielectric Material
D1	TFE or equiv. per MIL-P-19468A
D2	PBT Polyester, 30% glass reinforced MIL-P-46161 Grade A Class 3
D3	Diallyl Phthalate, MIL-M-14F, Type SDG
D4	Durez 16274 Phenolic
D5	Polystyrene
D6	Copolymer of Styrene, Type E-2 per MIL-P-77C
D9	PTFE per ASTM-D-1457
D11	Glass Pressure Seal
D12	Noryl GFN2 20% Glass filled
D14	Polypropylene
D15	20% Glass filled Polycarbonate/Polypropylene
D17	Valox Housing, Noryl Insulator
D19	Noryl GFN2 SE 1/Noryl HS2000
D20	Black Valox Housing, White Noryl Insulator
D22	Noryl SE-100-80283
D23	Delrin
D24	Phenolic
D25	PBT Polyester
D26	TPX
D30	LCP
D31	Valox
D32	Red TFE or equiv. per ASTM D1457
L1	Molded, Liquid Crystal Polymer

VSWR vs. Return Loss (R)

Aerospace Products

This publication is intended to illustrate and briefly describe the Amphenol/Pyle-National Interconnection Product Lines. The sections of this brochure are by family types. Each type of connector is available in a variety of sizes and configurations. These detailed catalogs include dimensional drawings, insert patterns and how to order information. For a product catalog, call **(800) 678-0141**

Chip Connectors

Also call IC card, Integrated Circuit card, Smart card, as well as a number of application specific titles... a chip card is basically a standard plastic "credit card" with an integrated circuit silicon chip embedded in a die that is milled out of the plastic. Eight gold-plated pads are connected to the IC. These pads are the card's interface with the outside world. For a product catalog, call **(734) 451-6400** in the US or **(49-7) 13.19.29.322** in Europe.

Filtered Connectors

Amphenol Canada Corp., a subsidiary of Amphenol Corporation, is an international leader in the manufacture of Filtered Connectors and Specialty Interconnect Devices, and has been pioneering EMI and EMP technologies for more than 30 years. EMI/EMP filter connector products which are used in Commercial, Industrial, Communications, Military and Aerospace applications worldwide. For a product catalog, call **(416) 291-4401**

Fiber Optic Products

Amphenol is a premier manufacturer of optical interconnect products. Headquartered in Lisle, Illinois. Amphenol offers the industry's most complete line of passive interconnect products from our universal termination system to the latest wave length division multi-plexers. For a product catalog, call **(800) 944-6446**

D-Subminiature

Amphenol's line of D-Subminiature rack and panel connectors is part of an industry standard for applications requiring reliable, rugged, high density connectors. These connectors are designed to accommodate rack and panel, cable to panel and cable to cable applications. Amphenol D-Subminiature connectors can be used in commercial, industrial or military markets. Applications include Business equipment, Electronic office systems, Data communication, Medical equipment and SCSI interfacing. For a product catalog, call **(416) 291-4401**

Hardline/SemiFlex

Amphenol's Broadband Connector Division is setting the standard for hardline connectors in the CATV industry. Our unique three-piece hardline design provides exceptional electrical performance, long term reliability and installation-friendly features. For a product catalog, call **(800) 881-9913**

Spectra•Strip

In applications ranging from large scale massively parallel processors (MPP) and symmetric multiple processors (SMP) servers to telephone digital cross-connects to high speed automatic test equipment. Amphenol Spectra•Strip offers a wide variety of products and accessories for all types of applications like: Ribbon and Micro-ribbon connectors, Sockets, Headers and Board mount connectors. For a product catalog, call **(800) 846-6400**
