- Input Voltage Range: 1.75 V to 5.5 V
- Output Voltage Range: 0.9 V to 5 V
- $\pm 2\%$ Output Accuracy Over Line, Load Regulation, and Operating Temperature Range
- 300-mA Maximum Output Current
- Low Dropout Voltage: 180 mV Maximum at 300 mA
- High PSRR:
 - 81.9 dB at 1 kHz
 - 87.9 dB at 10 kHz
 - 61.4 dB at 100 kHz
 - 44.7 dB at 1 MHz
- 8.6- μV_{RMS} Output Voltage Noise
- Excellent Transient Response
- Output Reverse Current Protection
- Stable with a 1- μF or Larger Ceramic Output Capacitor
- Thermal Shutdown and Over-Current Protection
- Junction Temperature Range: -40°C to $+125^{\circ}\text{C}$
- Package Options:
 - SOT23-5
 - DFN1x1-4
 - WLCSP0.65x0.65-4

Applications

- Portable and Battery-Powered Equipment
- Mobile Phones and Tablets
- Digital Cameras and Audio Devices Power Supply
- Video Surveillance

Description

The TPL9032 series products are 300-mA high PSRR, ultra-low noise, and low dropout linear regulators with high output accuracy. The TPL9032 series products support both fixed output voltage ranges from 0.9 V to 5 V and are stable with 1 μF or larger ceramic output capacitor.

The TPL9032 series products have high PSRR with 87.9 dB at 10 kHz and 8.6 μV_{RMS} ultra-low noise. These features make TPL9032 series products very suitable for noise-sensitive applications with high noise from previous stage power supply, such as high-performance analog devices, or high-definition imaging equipment. Output shortage protection and thermal overload protection circuits improve the reliability under heavy load conditions.

The TPL9032 series products provide SOT23-5, DFN1x1-4, and WLCSP0.65x0.65-4 packages with guaranteed operating junction temperature range (T_J) from -40°C to $+125^{\circ}\text{C}$.

Functional Block Diagram

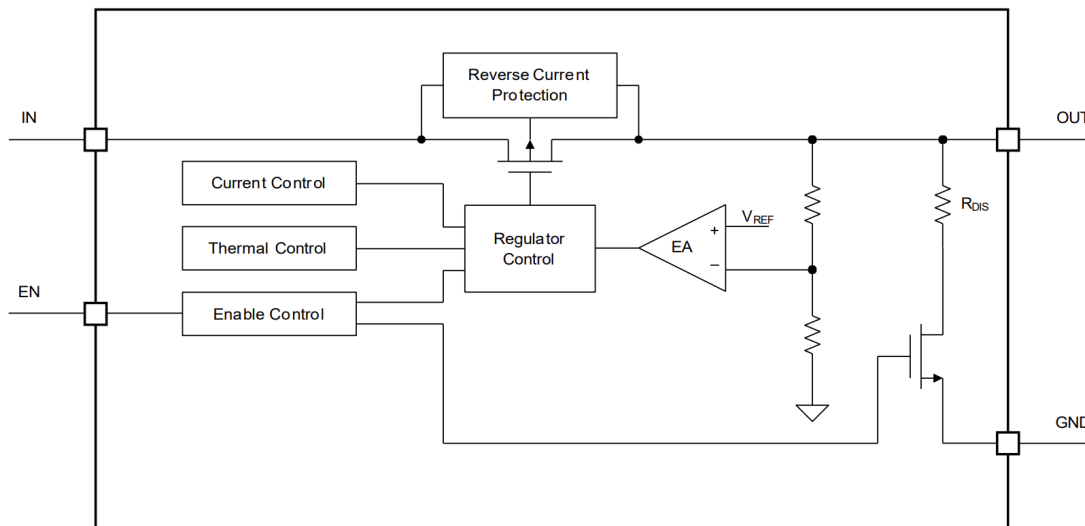

Figure 13. Functional Block Diagram

Feature Description

Enable (EN)

The enable pin (EN) is active high. Connect this pin to the GPIO of an external processor or digital logic control circuit to enable and disable the device. Or connect this pin to the IN pin for self-bias applications.

Operating Voltage Range (V_{IN})

The TPL9032 series does not include any dedicated UVLO circuitry. The output voltage of the TPL9032 series is not well regulated until V_{IN} exceeds 1.75 V or ($V_{\text{OUT}} + V_{\text{DO}}$).

Regulated Output Voltage (V_{OUT})

The TPL9032 series are available in fixed voltage versions of 0.9 V to 5 V. When the input voltage is higher than $V_{\text{OUT(NOM)}} + 1$ V, the output pin is the regulated output based on the selected voltage version. When the input voltage falls below $V_{\text{OUT(NOM)}} + 1$ V, the output pin tracks the input voltage minus the dropout voltage based on the load current.

Reverse-Current Protection (RCP)

The TPL9032 series provides reverse-current protection (RCP) to prevent output reverse current. If large capacitors have been used at the output, there would be a large reverse current when the input voltage is lower than the output voltage. The TPL9032 series can shut off the regulator and body diode path to prevent the device damaged from reverse current fault.

Current Limit

The TPL9032 series integrates an internal current limit that helps to protect the regulator during fault conditions. When the output is shorted, the LDO supplies a typical current of 100 mA. The output voltage is not regulated when the device is in current limit, and $V_{OUT} = I_{CL} \times R_{LOAD}$.

Thermal Shutdown

During normal operation, the LDO junction temperature should not exceed 125°C. When the junction temperature exceeds the thermal shutdown threshold, the LDO shuts down the output immediately. When the junction temperature falls below a value, which equals to thermal-shutdown threshold minus thermal-shutdown hysteresis, the output turns on again.

Application and Implementation

Note

Information in the following application sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

Application Information

The TPL9032 devices are a series of 300-mA high PSRR, ultra-low noise, low-dropout linear regulator. The following application schematic shows a typical usage of the TPL9032 series.

Typical Application

Figure 14 shows the typical application schematic of the TPL9032 series.

Figure 14. Typical Application Circuit

Input Capacitor and Output Capacitor

3PEAK recommends adding a 1- μ F or greater capacitor with a 0.1- μ F bypass capacitor in parallel at the IN pin to keep the input voltage stable. The voltage rating of the capacitors must be greater than the maximum input voltage.

To ensure loop stability, the TPL9032 series requires an output capacitor of 1 μ F or greater. 3PEAK recommends selecting an X5R- or X7R-type ceramic capacitor with low ESR over temperature.

Both input capacitors and output capacitors must be placed as close to the device pins as possible.

Power Dissipation

During normal operation, the LDO junction temperature should not exceed 125°C. Use the below equations to calculate the power dissipation and estimate the junction temperature.

The power dissipation can be calculated using [Equation 1](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad (1)$$

The junction temperature can be estimated using [Equation 2](#). θ_{JA} is the junction-to-ambient thermal resistance.

$$T_J = T_A + P_D \times \theta_{JA} \quad (2)$$

Layout

Layout Guideline

- Both input capacitors and output capacitors must be placed as close to the device pins as possible.
- It is recommended to bypass the input pin to ground with a 0.1- μ F bypass capacitor. The loop area formed by the bypass capacitor connection, the IN pin, and the GND pin of the system must be as small as possible.
- It is recommended to use wide and thick copper to minimize I \times R drop and heat dissipation.
