## FEATURES

- Input Power Voltage:  $24V \pm 1V$
- Input Current Range: 140mA to 600A
- Output Voltage: 0 to  $-1kV$  @ CTRL = 0 to 5V
- Max. Output Current: 10mA
- Reference Voltage:  $5V \pm 0.05V$
- Input Control Voltage: 0 to 5V
- Electronic Shutdown Control Available
- Zero EMIs and Good Heat Sinking by Metal Enclosure

Figure 2. The Connecting Lead Wires of  
AHV24VN1KV10MAW

## APPLICATIONS

This power module, AHV24VN1KV10MAW, is designed for achieving DC-DC conversion from low voltage to high voltage as a power supply source. It can be used for:

- X-ray Machine
- Spectral Analysis
- Nondestructive Inspection
- Semiconductor Manufacturing Equipment
- Particle Accelerator
- Capillary Electrophoresis
- Particles Injection
- Physical Vapor Phase Deposition
- Electrospinning Preparation of Nanofiber
- Glass/ Fabric Coating
- DC Reactive Magnetron Sputtering

Table 1. Pin Names, Colors, Functions and Specifications.

No.	Name	Description	Type	Color		Min.	Typ.	Max.
1	SDN	Shutdown logic low	Digital input		Blue	0V		0.8V
		Shutdown logic high				1.2V		5V
2	5VR	Reference voltage	Analog output		Yellow		5V	
3	CTRL	Regulation	Analog input		White	0V		5V
4	VPS	Input voltage	Power supply input		Red	11V	12V	13V
5	GND	Ground	Ground for power supply and analog & digital signals		Black		0V	
6	VOUT	Output high voltage	Power output		Brown	0V		-1kV

## DESCRIPTION

Figure 1 shows the actual pictures of AHV24VN1KV10MAW. Figure 2 shows its connecting wires. More detail information is given in Table 1. The high voltage output can be set to a constant value between 0V to  $-1\text{kV}$  by connecting the CTRL port to the central tap of a POT (Potentiometer) or modulated by an AC signal ranging from 0V to 5V, as see Figure 3 and Figure 4 respectively. The output voltage equals to 200 times the input control voltage:  $V_{\text{VOUT}}=200\times V_{\text{CTRL}}$ .

Figure 3. Setting Output to be a Constant Voltage

Figure 4. Modulating Output by an AC Signal Source

Please note that the modulation signal must have a low frequency  $\leq 12\text{Hz}$  and the value range must be  $0\text{V} \leq V_{\text{CTRL}} \leq 5\text{V}$ . The equivalent input circuit for the CTRL is shown in Figure 5.

Figure 5. The Equivalent Circuit for CTRL Port

To shutdown AHV24VN1KV10MAW, pull down SDN pin to  $<0.8\text{V}$ ; to turn it on, leave SDN pin unconnected or pull it  $>1.2\text{V}$ . The maximum voltage allowed on the SDN pin is 5V. The equivalent circuit for SDN port is shown in Figure 6.

Figure 6. The Equivalent Circuit for SDN Port

## USING AHV24VN1KV10MAW

This high voltage power supply must be mounted tightly onto a metal plate, ideally, thus expanding its heating sinking capacity of the metal enclosure. Sufficient ventilation must be provided to keep the power supply surface temperature under  $55^{\circ}\text{C}$ .

## SAFETY PRECAUTIONS

Although AHV24VN1KV10MAW high voltage power supply comes with an over current protection circuit, a short circuit at the output should always be avoided. Make sure the high voltage wire for connecting VOUT node has sufficient insulation capability with its surrounding objects.

$VOUTN = -N \times V_{CTRL}$ , where  $N$  is the amplification factor:  $N = R_1/R_2$ .

## SPECIFICATIONS

Table 2. Characteristics.  $T_A = 25^\circ\text{C}$ , unless otherwise noted.

Parameter	Symbol	Test Conditions	Min.	Typ.	Max.	Unit/Note
Input Power Supply Voltage	$V_{VPS}$		23	24	25	V
Input Power Supply Quiescent Current	$I_{VPS\_QC}$	$I_{VOUT} = 0\text{mA}$	140	150	160	mA
Input Power Supply Current at Full Load	$I_{VPS\_FL}$	$I_{VOUT} = 10.0\text{mA}$	550	600	650	mA
Input Power Current at Shutdown	$I_{VPS\_SHDN}$	$T_A = -10^\circ\text{C} \sim 55^\circ\text{C}$		16		mA
Modulation Voltage Range on CTRL	$V_{CTRL}$		0		5	V
Modulation Frequency Range on CTRL	$f_{CTRL}$		0		12	Hz
Shutdown Port Current	$I_{SDNL}$	$0 \leq V_{SDNL} < 0.8\text{V}$	-5		-4.2	$\mu\text{A}$
	$I_{SDNH}$	$1.2\text{V} < V_{SDNL} < 5\text{V}$	0		3.8	$\mu\text{A}$
Shutdown Voltage Logic Low	$V_{SDNL}$		0		0.8	V
Shutdown Voltage Logic High	$V_{SDNH}$		1.2		5	V
Output Voltage	$V_{VOUT}$	$I_{VOUT} = 0 \sim 10.0\text{mA}$	0		-1000	V
Output Current Range	$I_{VOUTMAX}$	$V_{VPS} = 23\text{V} \sim 25\text{V}$	0		10.0	mA
Reference Voltage Output Range	$V_{5VR}$	$T_A = -10^\circ\text{C} \sim 55^\circ\text{C}$ $I_{5VR} < 1\text{mA}$	4.95	5	5.05	V
Reference Current Output Range	$I_{5VR}$	$T_A = -10^\circ\text{C} \sim 55^\circ\text{C}$ $V_{5VR} = 0 \sim 5\text{V}$	0		1	mA

Parameter	Symbol	Test Conditions	Min.	Typ.	Max.	Unit/Note
Output Load Range			$\frac{V_{VOUT}}{I_{VOUT}}$		$\infty$	$M\Omega$
Output Voltage Ripple	$V_{VOUT\_RP}$	Bandwidth = 1MHz $R_{LOAD} = 100K\Omega$	$\leq 0.5$			$V_{P-P}$
Output Voltage Temperature Coefficient	$TCV_{VOUT}$	$V_{VPS} = 24V$ $V_{CTRL} = V_{5VR} = 5V$ $V_{VOUT} = -1kV$ $I_{VOUT} = 10mA$ $T_A = -10^{\circ}C \sim 55^{\circ}C$		$\leq 0.01$		$^{\circ}/^{\circ}C$
Output Voltage Range v.s. Temperature	$V_{VOUT}(T)$	$V_{VPS} = 24V$ $V_{CTRL} = V_{5VR} = 5V$ $V_{VOUT} = -1kV$ $I_{VOUT} = 10mA$ $T_A = -10^{\circ}C \sim 55^{\circ}C$	$0.99V_{VOUT}$	$V_{VOUT}$	$1.01V_{VOUT}$	V
Output Voltage Drift	Short Term Drift	$\frac{ \Delta V_{VOUT} }{V_{VOUT}}$ $\Delta t \text{ (min)}$	$V_{VPS} = 24V$ $V_{CTRL} = V_{5VR} = 5V$ $V_{VOUT} = -1kV$ $I_{VOUT} = 10mA$ $T_A = -10^{\circ}C \sim 55^{\circ}C$	$\leq 0.5$		$^{\circ}/min$
	Long Term Drift	$\frac{ \Delta V_{VOUT} }{V_{VOUT}}$ $\Delta t \text{ (h)}$		$\leq 1$		$^{\circ}/h$
Output Voltage Rise Time	$t_r$	$V_{VOUT}(t_1) = -100V$ $V_{VOUT}(t_2) = -900V$ $R_{Load} = 100K\Omega$		50		ms
Output Voltage Fall Time	$t_f$	$V_{VOUT}(t_2) = -900V$ $V_{VOUT}(t_3) = -100V$ $R_{Load} = 100K\Omega$		100		ms
Mean Time Between Failure	MTBF			1M		h
Instantaneous Short Circuit Current at the Output	$I_{VOUT\_SC}$			$\leq 1000$		mA
Load Regulation	$\frac{ \Delta V_{VOUT} }{V_{VOUT}}$ $\Delta I_{VOUT}$	$V_{VOUT} = -1kV$ $I_{VOUT} = 10mA$		$\leq 0.05$		$^{\circ}/mA$
Full Load Efficiency	$\eta$	$V_{VPS} = 24V$ $V_{VOUT} = -1kV$ $I_{VOUT} = 10mA$		$\geq 70$		%
Operating Temperature Range	$T_{opr}$		-10		55	$^{\circ}C$
Storage Temperature Range	$T_{stg}$		-20		85	$^{\circ}C$
External Dimensions			82×55×28			mm
			3.23×2.17×1.10			inch
Weight				210		g

				7.4		Oz

## TESTING DATA

Test conditions:  $V_{VPS} = 24V$ ,  $T_A = 25^\circ C$ ,  $R_{LOAD} = 100K\Omega$

### DC Testing

The measured output voltage,  $V_{VOUT}$ , corresponding to the control port input voltage,  $V_{CTRL}$ , is shown in Figure 7.

Figure 7.  $V_{CTRL}$  vs.  $V_{VOUT}$

### AC Testing

To test the analog modulation function, a triangle and sine-wave voltage signals are applied to the CTRL port as the input source signal respectively. Figure 8 and 9 show both the input signal and the output signal waveforms when using the triangle and sine-wave signals at the CTRL port respectively.

Figure 8. Triangle Wave Modulation

Figure 9. Sine Wave Modulation

To test the rise and fall times at the output, a step function signal is applied to the CTRL port. The testing results are shown in Figure 10, Figure 11, and Figure 12. As shown in Figure 11 and Figure 12, a square wave of  $0.25V \sim 5V$ ,  $f = 0.10Hz$ , is applied to CTRL port, the output waveform fall time is measured to be about 100ms and the rise time is about 50ms. These two values are not the same, that is because on the rising trail, the power supply injects a current to the load; while on the falling trail, the best the power supply can do is to stop its output current and let the load resistor drain the output filtering capacitor to a lower voltage, and the draining current is much smaller than the injection current.

**NOTICE**

1. It is important to carefully read and follow the warnings, cautions, and product-specific notes provided with electronic components. These instructions are designed to ensure the safe and proper use of the component and to prevent damage to the component or surrounding equipment. Failure to follow these instructions could result in malfunction or failure of the component, damage to surrounding equipment, or even injury or harm to individuals. Always take the necessary precautions and seek professional assistance if unsure about proper use or handling of electronic components.

2. Please note that the products and specifications described in this publication are subject to change without prior notice as we continuously improve our products. Therefore, we recommend checking the product descriptions and specifications before placing an order to ensure that they are still applicable. We also reserve the right to discontinue the production and delivery of certain products, which means that not all products named in this publication may always be available.
3. This means that while ATI may provide information about the typical requirements and applications of their products, they cannot guarantee that their products will be suitable for all customer applications. It is the responsibility of the customer to evaluate whether an ATI product with the specified properties is appropriate for their particular application.
4. ATI warrants its products to perform according to specifications for one year from the date of sale, except when damaged due to excessive abuse. If a product fails to meet specifications within one year of the sale, it can be exchanged free of charge.
5. ATI reserves the right to make changes or discontinue products or services without notice. Customers are advised to obtain the latest information before placing orders.
6. All products are sold subject to terms and conditions of sale, including those pertaining to warranty, patent infringement, and limitation of liability. Customers are responsible for their applications using ATI products, and ATI assumes no liability for applications assistance or customer product design.
7. ATI does not grant any license, either express or implied, under any patent right, copyright, mask work right, or other intellectual property right of ATI.
8. ATI's publication of information regarding third-party products or services does not constitute approval, warranty, or endorsement.
9. ATI retains ownership of all rights for special technologies, techniques, and designs for its products and projects, as well as any modifications, improvements, and inventions made by ATI.
10. Despite operating the electronic modules as specified, malfunctions or failures may occur before the end of their usual service life due to the current state of technology. Therefore, it is crucial for customer applications that require a high level of operational safety, especially in accident prevention or life-saving systems where the malfunction or failure of electronic modules could pose a risk to human life or health, to ensure that suitable measures are taken. The customer should design their application or implement protective circuitry or redundancy to prevent injury or damage to third parties in the event of an electronic module malfunction or failure.
